Course Outcomes for the Course: Embedded Systems Design and Development

CO1: Acquire knowledge and understand fundamental embedded systems design paradigms

CO2: Analyze a system both as whole and in the included parts, to understand how these parts interact in the functionality and properties of the system

CO3: Analyze and implement embedded systems, e.g. integrating embedded subsystems and applications in building a fully functional autonomous robot

CO4: Apply formal method, testing, verification, validation and simulation techniques and tools in order to engineer reliable and safe embedded systems

CO5: Demonstrate a deeper understanding of the electronics and physical principles used for embedded biomedical measuring systems
