

SATHYABAMA

INSTITUTE OF SCIENCE & TECHNOLOGY
(Deemed to be University U/S 3 of UGC Act 1956)
Jeppiaar Nagar, Rajiv Gandhi Salai, Chennai – 600119.

SYLLABUS

SCHOOL OF COMPUTING
BACHELOR OF TECHNOLOGY
INFORMATION TECHNOLOGY
(8 SEMESTERS)

PROGRAMME: B.Tech.[INFORMATION TECHNOLOGY]CURRICULUM

SEMESTER-1										
Sl.No.	Course type	Course code	Course title	L	T	P	C	Marks		PAGE No.
								CAE	ESE	
1	Theory	SHSA1105	Technical English	3	0	0	3	50	50	1
2	Theory	SMTA1101	Engineering Mathematics-I	3	*	0	3	50	50	3
3	Theory	SCYA1102	Engineering Chemistry	3	0	0	3	50	50	5
4	Theory	SBTA1101	Environmental Science and Engineering	2	0	0	0	-	-	7
5	Theory	SEEA1103	Electrical and Electronics Engineering	3	0	0	3	50	50	9
6	Theory	SCSA1104	Problem Solving Techniques with C and C++	3	0	0	3	50	50	10
7	Practical	SCYA2101	Engineering Chemistry Lab	0	0	2	1	25	25	11
8	Practical	SCSA2105	Problem Solving Techniques Lab	0	0	4	2	50	50	12
Total Credits for 1 st semester=18										
Total Marks for 1 st semester=750										

SEMESTER-2										
Sl.No.	Course type	Course code	Course title	L	T	P	C	Marks		Page No.
								CAE	ESE	
1	Theory	SMTA1201	Engineering Mathematics-II	3	*	0	3	50	50	13
2	Theory	SPHA1202	Physics for Information Sciences	3	0	0	3	50	50	14
3	Theory	SMEA1102	Engineering Drawing	1	0	4	3	50	50	16
4	Theory	SCSA1201	Fundamentals of Digital Systems	3	0	0	3	50	50	17
5	Theory	SCSA1204	Python Programming	3	0	0	3	50	50	18

SHSA1105	TECHNICAL ENGLISH	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES:

- To understand specialized subject areas and skills included for their study.
- To comprehend and react in oral and written forms to the specialized texts
- To respond to listening, reading and writing tasks by using digital tools
- To enhance communication, collaboration and critical thinking skills
- To explore creativity through blended learning contexts

UNIT 1**9 Hrs.****Listening:** Listening to choose the correct answer from the options given**Speaking:** Self Introduction, Talking about likes and dislikes**Reading:** Comprehending a passage- Skimming, scanning, detailed reading**Writing:** Letter of Job Application, Resume, Letter to the editor highlighting problems suggesting solutions**Vocabulary:** Kinds of sentences, Affixes, Collocations, Sequence words, contextual guessing of words**Language Focus:** Parts of speech, Tense and its types, Voice- Impersonal Passive**Language Lab work:** Focus Digital literacy: students join zoom platform/using online tools**UNIT 2****9 Hrs.****Listening:** Listening to say true or false**Speaking:** JAM on current topics**Reading:** Identifying topic sentences by reading content**Writing:** Writing compare/ contrast paragraphs, process description and paraphrasing**Vocabulary:** Verbal phrases, prepositions and prepositional phrases, concord, discourse markers**Language focus:** Clauses, Sentence types- Simple, compound, complex, Conjunctions**Language Lab:** Digital literacy: Responding to quiz using Kahoot application**UNIT 3****9 Hrs.****Listening:** Listening to summarize the information**Speaking:** Group discussion on a given topic**Reading:** To find specific information and to prepare notes using the format**Writing:** Framing open ended questions- Survey Report- Arranging the sentences in the right order**Vocabulary:** Paired expressions, Adjectives/ adverbs, Technical definitions, Compound nouns**Language focus:** Punctuation, Editing, Same words used as different parts of speech**Language Lab:** Digital literacy: Powerpoint tools- Slideshare to make presentation on the survey report**UNIT 4****9 Hrs.****Listening:** Listening to differentiate instructions and recommendations**Speaking:** Debate on current issues**Reading:** Reading to understand and classify the information**Writing:** Instructions, Recommendations, Preparation of User Manual**Vocabulary:** Classification of words, Abbreviations, Acronyms,**Language:** Reported Speech, Causatives, Basic Sentence**patterns Language Lab:** Digital literacy: Using online discussion forum**UNIT 5****9 Hrs****Listening and summarizing:** Listening to identify the structure of sentences**Speaking:** Giving impromptu talks, Speech Writing**Reading:** Read argumentative essays and paragraphs
Writing: Essay writing, Checklist preparation, Note making
Vocabulary: Homophones/ Homonyms, Idioms and phrases**Language focus:** Negatives, Tag questions, Similes and metaphors**Language Lab:** Digital literacy: Creating own Blogs and interactive exercises and quizzes online

COURSE OUTCOMES:

On completion of the course, student will be able to

- Classify technical words to use them in sentences framing, compose problem solving paragraphs
- Categorize information based on the understanding of reading materials to prepare notes
- Prepare and document to report, identify elements of editing
- Interpret technical definitions related to the text and design a user manual using instructions
- Summarize reading materials and outline an essay on any topic given
- Demonstrate their language learning activities in the classroom/ online group environment

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100**

Part A: 10 questions carrying 2 marks each - No choice

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

Exam Duration: 3 Hrs.

20 marks

80 marks

SMTA1101	ENGINEERING MATHEMATICS I (COMMON TO ALL BRANCHES EXCEPT BIO GROUPS)	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVE:

The Objective of this Course is to identify, reflect upon, evaluate and achieve conceptual understanding and knowledge of traditional Calculus to form independent judgments. The purpose of this course is for Modeling the Engineering problems and obtaining its solutions mathematically. This helps in understanding Science, Engineering and Computer Science analytically and logical thinking is attained.

UNIT I MATRICES

9 Hrs

Characteristic equation of a square matrix - Eigen values and Eigen vectors of a real matrix - Properties of eigen values and eigen Vectors - Cayley-Hamilton theorem (without proof) - verification, finding inverse and power of a matrix - Diagonalisation of a matrix using orthogonal transformation - Quadratic forms - Nature of quadratic forms - Reduction of quadratic form to canonical form by orthogonal transformation.

UNIT II GEOMETRICAL APPLICATIONS OF DIFFERENTIAL CALCULUS

9 Hrs

Curvature - centre, radius and circle of curvature in Cartesian co-ordinates - Evolutes - Envelope of family of curves with one and two parameters - Evolute as envelope of normal.

UNIT III

9 Hrs

Partial derivatives (Definition) - Total derivative - Jacobian - Taylor's expansion - Maxima and minima of functions of two variables - Constrained maxima and minima using Lagrange's multiplier method.

UNIT IV INTEGRAL CALCULUS I

9 Hrs

Definite integrals - Properties of definite integrals and problems - Beta and Gamma integrals - Relation between them - Properties of Beta and Gamma integrals with proofs - Evaluation of definite integrals in terms of Beta and Gamma function.

UNIT V INTEGRAL CALCULUS II

9 Hrs

Double integrals in Cartesian and Polar co-ordinates - Change of order of integration - Change of variables from Cartesian to Polar coordinates - Area of plane curves using double integrals - Triple integrals - Volume using triple integrals in Cartesian co-ordinates (Simple Applications).

Max,45Hours

COURSE OUTCOMES:

After completing this course, students will understand the following concepts thoroughly and will be able to apply it in academic problems and industrial real life problems.

CO 1: Define eigen values and eigen vectors, radius and circle of curvature. Recall properties of definite integrals

CO2: Understand the concept of partial derivatives to find Jacobian and Taylors series expansion. Explain change of order of integration.

CO3:Uses of Cayley Hamilton theorem and its verification. Solve problems in Area and Volume using integration.

CO4: Point out the stationary points and categorize maxima and minima. Discuss the problems involving Beta and Gamma integrals.

CO5: Produce diagonal matrix by transformation of symmetric matrices.

CO6: Develop the canonical form of a quadratic form. Construct evolute and envelope of family of curves

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100**

Part A: 10 questions carrying 2 marks each - No choice

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

Exam Duration: 3 Hrs.

20 marks

80 marks

SCYA1102	ENGINEERING CHEMISTRY	L	T	P	Credits	Total Marks
		3	1	0	3	100

COURSE OBJECTIVES:

- To understand the basic concepts of quantum chemistry for bonds to bands
- To learn the principles and applications of energy levels in molecules
- To explore the importance of functional materials for electronic devices
- To study the structure and properties of carbon materials
- To identify the significance of chemistry in engineering and technology

UNIT 1 BONDS TO BANDS**9 Hrs.**

Introduction to quantum chemistry - Motion of a quantum mechanical particle in one dimension (time-independent) - Schrödinger wave equation for hydrogen atom (No derivation) - Physical meaning of wave function - Angular and radial wave functions and probability densities - Quantum numbers - Principal, azimuthal, spin and magnetic quantum numbers - Wave functions and orbital shapes - s,p,d,f - LCAO-MO of H₂ - Band theory of solids: Conductors, semi-conductors and superconductors - Role of As and Ga doping on band structures.

UNIT 2 MOLECULAR SPECTROSCOPY**9 Hrs.**

Electromagnetic spectrum - Interaction of radiation with matter - Energy levels in molecules - Microwave spectroscopy - Principle - Classification of molecules based on moment of Inertia - Rotational energy expression (J levels) - Calculation of J for CO molecule - Vibrational spectroscopy - Normal modes of vibrations - Vibrations of polyatomic molecules (CO₂ and H₂O) - Determination of Force constant - Electronic transitions in organic molecules - Mathematical derivation of Beer-Lambert's law - Stimulated Emission - Lasers in action - Excimer laser, Diode laser and Gas laser.

UNIT 3 FUNCTIONAL MATERIALS**9 Hrs.**

Introduction to conducting polymers - Charge transport carriers: Exciton formation in organic solar cells and organic light emitting diodes (principle and working) - Conduction mechanism in polymers: Soliton, polaron and bipolaron formation in polyacetylene and polyaniline - Liquid crystals: Characteristic features and phases of liquid crystals - Liquid crystal displays.

UNIT 4 CARBON MATERIALS FOR HEALTH, STEALTH AND ENERGY**9 Hrs.**

Introduction to carbon materials - Fullerenes - Production, properties and applications - VanderWaal's solid - Structure of graphene, graphene oxide and reduced graphene oxide - Mechanical and electrical properties of graphene - Graphene based energy storage devices for space applications - Carbon nanotubes - Single-walled and multiwalled CNTs - Synthesis of CNTs by Thermal CVD and laser ablation method - Electrical and mechanical properties of CNTs - Applications of CNTs.

UNIT 5 ENGINEERING MATERIALS 9 Hrs.

Phase equilibria: Gibbs phase rule - Terms involved in Phase rule - Phase diagram of water system - Thermal method of analysis - Construction of simple eutectic system (Lead-Silver system).

Fuels: Classification of fuels - Determination of calorific values of solid fuels by bomb calorimeter - Manufacture of synthetic petrol by Fischer-Tropsch method - Knocking in IC engines - Chemical structure - Octane and cetane rating of fuels.

Nanomaterials: Size dependent properties of nanomaterials - Synthesis of gold and silver nanoparticles by Chemical reduction method - Applications of nanoparticles in medicine.

COURSE OUTCOMES:

On completion of the course the student will be able to

- CO1: Apply the principles of quantum chemistry in conduction mechanism in solids.
- CO2: Analyze the spectral transitions of molecules for photonic devices.
- CO3: Assess the role of charge transport carriers for functioning of electronic devices.
- CO4: Analyze the properties of carbon materials for applications in health, stealth and energy sectors.
- CO5: Examine the properties of engineering materials for nanodevice fabrication.
- CO6: Evaluate the materials for real world applications.

END SEMESTER EXAM QUESTION PAPER PATTERN

Max. Marks: 100

Exam Duration: 3 Hrs.

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SBTA1101	ENVIRONMENTAL SCIENCE AND ENGINEERING (Common to ALL Branches of B.E/ B. Tech.)	L	T	P	Credits	Total Marks
		2	0	0	0	-

COURSE OBJECTIVE

To impart knowledge on the issues related to environment and to emphasize the importance of a clean environment

UNIT 1 INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES**10 Hrs.**

Definition, scope and importance, need for public awareness, forest resources: use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams, floods, drought, conflicts over water, dams-benefits and problems, mineral resources: use effects on forests and tribal people. water resources: use and over-utilization of surface and ground water, exploitation, environmental effects of extracting and using mineral resources, case studies food resources: world food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies. Energy resources: growing energy needs, renewable and non renewable energy sources, use of alternate energy sources: Case studies. Land resources: land as a resource, land degradation, man induced landslides, soil erosion and desertification, role of an individual in conservation of natural resources, equitable use of resources for sustainable lifestyles.

UNIT 2 ECOSYSTEMS AND BIODIVERSITY**10 Hrs.**

Concept of an ecosystem, structure and function of an ecosystem - producers, consumers and decomposers - energy flow in the ecosystem, ecological succession, food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries). Introduction to biodiversity, definition: genetic, species and ecosystem diversity - biogeographical classification of India - value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values, biodiversity at global, national and local levels. India as a mega-diversity nation, hot-spots of biodiversity, threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts, endangered and endemic species of India, conservation of biodiversity, in-situ and ex-situ conservation of biodiversity.

UNIT 3 ENVIRONMENTAL POLLUTION**9 Hrs.**

Definition - causes, effects and control measures of: (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards. Solid waste management: causes, effects and control measures of urban and industrial wastes, role of an individual in prevention of pollution, pollution case studies, disaster management: floods, earthquake, cyclone and landslides.

UNIT 4 SOCIAL ISSUES AND THE ENVIRONMENT**8 Hrs.**

From unsustainable to sustainable development, urban problems related to energy, water conservation, rainwater harvesting, watershed management, resettlement and rehabilitation of people; its problems and concerns, case studies, environmental ethics: issues and possible solutions, climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. Wasteland reclamation, consumerism and waste products - environment protection act: air (prevention and control of pollution) act - water (prevention and control of pollution) act, wildlife protection act; forest conservation act. Issues involved in enforcement of environmental legislation, Key initiatives of Rio declaration, Vienna convention, Kyoto protocol, Johannesburg summit and public awareness.

UNIT 5 HUMAN POPULATION AND THE ENVIRONMENT**8 Hrs.**

Population growth, variation among nations, population explosion, family welfare programme, environment and human health, human rights, value education, HIV / AIDS, women and child welfare, role of information technology in environment and human health, case studies. Visit to a local area to document environmental assets river/forest/grassland/hill/mountain. Visit to a local polluted site-urban/rural/ industrial/agricultural-study of common plants, insects, birds-study of simple ecosystems, pond, river, hill slopes etc.

Max. 45 Hours**COURSE OUTCOMES**

On completion of the course, student will be able to

CO1: Recognize the need of conservation of natural resources for the future generations

CO2: Differentiate the uniqueness of each and every ecosystem and biodiversity

CO3: Identify the environmental pollution and to control them in a sustainable way

CO4: Execute the possible solutions to manage the natural and manmade disasters for the sustainable living

CO5: Distinguish the reasons for over population and give awareness to people through media to control population growth

CO6: Solve the environment related problems by conserving the natural resources for the future generations

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

Exam Duration: 3 Hrs.

20 marks

80 marks

SEEA1103	ELECTRICAL AND ELECTRONICS ENGINEERING (Common to CSE and IT)	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To impart knowledge on the analysis of DC and AC Circuits.
- To gain knowledge about the magnetic circuits.
- To impart Knowledge on electronic devices and their applications.

UNIT 1 D.C. CIRCUITS**9Hrs.**

Electrical Quantities - Ohm's law - Kirchhoff's laws - Resistance in series and parallel combinations - Current and Voltage division rules - Mesh analysis and Nodal analysis.

UNIT 2 A.C. CIRCUITS**9Hrs.**

Sinusoidal functions - R.M.S and Average values for Sinusoidal waveform - Phasor representation - Sinusoidal excitation applied to purely resistive, inductive and capacitive circuits - RL, RC and RLC series circuits - power and power factor - Introduction to three phase circuits with balanced load.

UNIT 3 MAGNETIC CIRCUITS**9 Hrs.**

Definition of MMF, Flux and reluctance -- Electromagnetic induction - Fleming's rule - Lenz's law - Faraday's laws - statically and dynamically induced EMF - Self and mutual inductance - Analogy of electric and magnetic circuits.

UNIT 4 SEMICONDUCTOR DEVICES**9 Hrs.**

VI Characteristics of PN-junction diodes and Zener diodes, BJT and its configurations - input/output Characteristics, Junction Field Effect Transistor - Drain and Transfer Characteristics, MOSFET - Depletion type and Enhancement type, Uni Junction Transistors - Silicon Controlled Rectifiers.

UNIT 5 RECTIFIERS, AMPLIFIERS AND OSCILLATORS**9 Hrs.**

Half and full wave rectifiers - Capacitive and inductive filters - ripple factor - PIV-rectification efficiency - RC coupled amplifier - positive and negative feedback - Barkhausen criterion for oscillations - RC and LC oscillators.

Max. 45 Hours.**COURSE OUTCOMES**

On completion of the course, student will be able to

- CO1 - Analyze electrical circuits using Kirchhoff's Laws.
 CO2 - Compare the behaviour of R, L and C and their combinations in AC circuits.
 CO3 - Understand the concepts of magnetic circuits
 CO4 - Demonstrate the characteristics of various semi-conductor devices
 CO5 - Recognize the importance of electronic devices.
 CO6 - Design Electronic Circuits for various applications.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration: 3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA1104	PROBLEM SOLVING TECHNIQUES WITH C AND C++	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To learn the fundamentals of PST and methodologies which are essential for building good C/C++ programs.
- To demonstrate a thorough understanding of modular programming by designing programs which require the use of programmer-defined functions.
- To impart the knowledge about pointers which is the backbone of effective memory handling.
- To demonstrate adeptness of object-oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.

UNIT 1 INTRODUCTION TO COMPUTER PROBLEM SOLVING**9 Hrs.**

Algorithms - Building blocks of algorithms (statements, control flow, functions) - Notation (pseudo code, flow chart) - Algorithmic problem solving for socio economic conditions in global perspectives - Simple strategies for developing algorithms (iteration, recursion) - Efficiency of algorithms.

UNIT 2 BASICS OF C PROGRAMMING**9 Hrs.**

Introduction to C: Features of C - Structure of C program-Data Types-'C' Tokens-Input/output statements-Control Statement, Functions:- Types of Functions -Recursion. Algorithms: Reversing the digits of a number - Generation of Fibonacci sequence- Factorial Computation.

UNIT 3 ARRAYS, STRINGS AND STRUCTURES**9 Hrs.**

Arrays: Single and Multidimensional Arrays- Array as Function Arguments, Strings: String Handling Functions, Structure: Nested Structures - Array of Structures - Structure as Function Argument-Function that Returns Structure, Union.

Algorithms: Sum of array elements- Removal of duplicates from an array-Finding the Kth smallest element.

UNIT 4 POINTERS AND FILE PROCESSING**9 Hrs.**

Pointers: Introduction, Arrays Using Pointers - Structures Using Pointers - Functions Using Pointer, Dynamic Memory Allocation, Storage Classes, File Handling in 'C'.

Algorithms: Swap elements using Call by Reference - Sorting Arrays using pointers- Finding sum of array elements using Dynamic Memory Allocation.

UNIT 5 OBJECT ORIENTED PROGRAMMING CONCEPTS**9 Hrs.**

Introduction-Procedure vs. object-oriented programming-Concepts: Classes and Objects-Operator & Function Overloading-Inheritance-Polymorphism and Virtual Functions.

Max.45Hrs.

COURSE OUTCOMES:

CO1: On completion of the course the student will be able to

CO2: CO1: Develop solutions for the given problem.

CO3: CO2: Design and Implement applications using arrays and strings.

CO4: CO3: Develop and Implement applications using memory allocation and File concepts.

CO5: CO4: Use proper class protection to provide security.

CO6: CO5: Describe the reusability of code through Inheritance.

CO7: CO6: Demonstrate the use of virtual functions to implement polymorphism.

80 marks

SCYA2101	ENGINEERING CHEMISTRY LAB	L	T	P	Credits	Total Marks
		0	0	2	1	50

COURSE OBJECTIVES

- To understand the basic principle involved in adsorption, kinetics and viscosity measurements.
- To acquire practical knowledge in pH metry, potentiometry and conductometry.
- To develop the skill in water analysis.

The List of probable experiments is mentioned below, which delineates the experiment to be performed in a semester. Any Eight experiments can be selected from the list.

List of Experiments

1. Separation and identification of organic compounds and determination of R_f values by thin layer chromatography.
2. Estimation of hardness of water by EDTA method.
3. Determination of freezing point depression of a compound.
4. Determination of pKa value of glycine by pHmetry.
5. Estimation of mixture of acids by conductometry.
6. Estimation of ferrous ion by potentiometry.
7. Determination of saponification value of oil.
8. Determination of the partition coefficient of a substance between two immiscible liquids.
9. Verification of freundlich adsorption isotherm using adsorption of acetic acid by charcoal.
10. Determination of high molecular weight polymer using Ostwald viscometer.
11. Estimation of copper in brass.
12. Determination of alkalinity of water.
13. Estimation of Iron by photocolourimetry.
14. Determination of dissolved oxygen content of water sample by Winkler's method.
15. Estimation of sodium in water by using Flame Photometry.

COURSE OUTCOMES:

The students will be able:

CO1- To acquire knowledge about adsorption in separation of mixtures.

CO2- To estimate the total hardness in water sample by complexometry.

CO3- To gain the knowledge of colligative properties by Rast Method.

CO4- To learn the principle of potentiometric and conductometric titrations.

CO5- To understand the significance of saponification value of oil.

CO6- To apply the concept of viscosity in determining the molecular weight of polymer.

TEXT / REFERENCE BOOKS

1. G.H. Jeffery, Vogel's Textbook of Quantitative Chemical Analysis, 6th Edition. Persons Education 2004.

SCSA2105	PROBLEM SOLVING TECHNIQUES LAB	L	T	P	Credits	Total Marks
		0	0	4	2	100

COURSE OBJECTIVES

- Identify the problem.
- To analyse the various steps in program development.
- Evaluate and select the best algorithm to solve the problem.
- Deploy suitable methods to get the desired output.
- Create the solutions for various Real-World Problems

LIST OF EXPERIMENTS:

1. Program to find GCD.
2. Program to find the max and min from the three numbers.
3. Program to find Exponentiation.
4. Program to find sum of an array of numbers.
5. Program to implement Sine function computation.
6. Program to Generate the Fibonacci sequence.
7. Program to find the roots of a Quadratic equation.
8. Program for reversing the digits of an integer.
9. Program to find the smallest divisor of an integer.
10. Program to Generate Prime Numbers.
11. Program to Raise a Number to a Large Power.
12. Program for Removal of Duplicates.
13. Program to find the kth smallest Element.
14. Program to generate histogram.
15. Program for addition and multiplication of matrices.
16. Program that converts a number ranging from 1 to 50 to Roman equivalent
17. To delete n Characters from a given position in a given string.
18. Program to search for a Key value in a given list of integers using linear search method.
19. Program to sort the number in ascending and descending order.
20. Program for finding the factorial using recursive and non-recursive functions

COURSE OUTCOMES

On completion of the course, student will be able to

CO1: Analyse and classify the given problem into various modules

CO2: Analysing the complexity of problems, modularize the problems into small modules and then convert them into programs.

CO3: Develop the codes containing looping and decision-making statements.

CO4: Implement user defined functions.

CO5: Apply recursion and call the function with appropriate parameters.

CO6: Design and develop solutions to real world problems

SMTA1201	ENGINEERING MATHEMATICS II (COMMON TO ALL BRANCHES EXCEPT BIO GROUPS)	L	T	P	Credits	Total Marks
		3	*	0	3	100

COURSE OBJECTIVES

Analytical, logical thinking and conclusions based on quantitative information will be the main objective of learning this subject.

UNIT I DIFFERENTIAL EQUATIONS**9 Hrs**

Higher order linear differential equations with constant coefficients - Particular Integral for e^{ax} , $\sin ax$ or $\cos ax$, x^n , $x^n e^{ax}$, $x \sin ax$, $x \cos ax$, $e^{ax} \sin bx$ or $e^{ax} \cos bx$ - Method of Variation of Parameters - Homogeneous equation of Euler's and Legendre's type - System of simultaneous linear differential equations with constant coefficients.

UNIT II VECTOR CALCULUS**9 Hrs**

Gradient, divergence and curl - Directional derivative - Irrotational and Solenoidal vector fields - Vector Integration - Simple problems on line, surface and volume Integrals - Green's theorem in a plane, Gauss divergence theorem and Stoke's theorem (without proofs)- Simple applications involving cubes and rectangular parallelepipeds.

UNIT III LAPLACE TRANSFORMATION**9 Hrs**

Laplace transform - Transforms of standard functions - properties - Transforms of derivatives and integrals - Transforms of the type $e^{at}f(t)$, $tf(t)$, $f(t)/t$ - Transform of periodic functions - Transform of unit step function and impulse function - Inverse Laplace transforms - Convolution theorem - Initial and final value theorems.

UNIT IV APPLICATIONS OF LAPLACE TRANSFORMATION**9 Hrs**

Linear ordinary differential equation with constant coefficients - Integral equations - Integral equations of convolution type - simultaneous linear differential equations with constant coefficients.

UNIT V FOURIER TRANSFORMATION**9 Hrs**

The infinite Fourier transform - Sine and Cosine transform - Properties - Inversion theorem - Convolution theorem - Parseval's identity - Finite Fourier sine and cosine transform.

Max. 45 Hours.**TEXT/REFERENCE BOOKS:**

1. Erwin Kreyszig, Advanced Engineering Mathematics, 10th edition, John Wiley & Sons, Singapore, 2012.
2. Grewal B.S., Higher Engineering Mathematics, 41th Edition, Khanna Publications, Delhi, 2011.
3. Bali N.P and Manish Goyal, A Text book of Engineering Mathematics, Eighth Edition, Laxmi Publications Pvt Ltd., 2011.
4. Veerarajan T, Engineering Mathematics for First Year, II Edition, Tata McGraw Hill Publishers, 2008.

6. Venkataraman M.K., Engineering Mathematics - First Year (2nd edition), National Publishing Co., 2000.
7. S. L., Ross, Differential Equations, 3rdEd., Wiley India., 2009

COURSE OUTCOMES:

After completing this course, students will understand the following concepts thoroughly and will be able to apply it in academic problems and industry/ real life problems.

- CO1: List the properties of Laplace transform. Recall the solution of ordinary Differential equations
- CO2: Understand the concept of Directional derivative, Irrotational and Solenoidal vector fields
- CO3: Explain Laplace transform and Fourier transform of functions and solve them
- CO4: Discuss different types of inverse Laplace and Fourier transform problems
- CO5: Evaluate problems on Green's, Stoke's and Divergence theorems
- CO6: Produce the solution of integral and differential equations using Laplace transforms

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100**

Part A: 10 questions carrying 2 marks each - No choice

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

Exam Duration: 3 Hrs.

20 marks

80 marks

SPHA1202	PHYSICS FOR INFORMATION SCIENCES (COMMON TO B.E-COMPUTER SCIENCE, DATA STRUCTURE, ARTIFICIAL INTELLIGENCE, IoT, AND INFORMATION TECHNOLOGY)	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

CO1: To learn about the wave Quantum mechanical concept to solve the equation of motion of systems.

CO2: To study the transport properties of solids via the band theory and employ to understand the applications of semiconductor.

CO3: Understanding the principle, different types and applications of LASER

CO4: To identify the magnetic materials for storage devices.

CO5: To understand the fundamental principles and working of sensors and display devices.

UNIT I: FUNDAMENTALS OF QUANTUM PHYSICS BEHIND COMPUTING**9 Hrs**

Introduction - electromagnetic waves - Photoelectric effect, Compton scattering, photons, wave - particle duality of radiation, de Broglie waves, wave-particle duality of matter. Physical interpretation of wave function - wave packets - Heisenberg uncertainty principle - Schrodinger time independent Equation - Eigen value, Eigen function. Physical applications of Schrödinger's equation to (i) square well potential in one dimension: transmission and reflection coefficient at a barrier - applications of Schrodinger equation in computational physics

UNIT II: PHYSICS OF SOLIDS IN COMPUTER COMPONENTS**9 Hrs**

Basics of solids - Origin of energy bands, band structure of conductors, semiconductors (n-type and p-type), insulators, half metals, semi metals. Metals - Free Electron Theory of metals, Fermi level, Fermi surface, density of states (Qualitative only). Wiedemann-Franz Law- Derivation. Semiconductors-Direct and indirect band gap, derivation of intrinsic carrier concentration in terms of energy band gap, experimental determination of energy band gap - applications of semiconductors in fabrication of basic components of modern computer

UNIT III : PHYSICS OF LASER BEHIND PHOTONIC COMPUTING**9 Hrs**

Introduction, Lasers-Spontaneous and stimulated emission, condition for Laser action, Concept of stimulated and spontaneous emission, Population inversion, Fibre lasers; Semiconductor lasers: Laser materials, Laser structure, Frequency control of laser output- Injection Laser Diode (ILD), Quantum Cascade Laser, Comparison between ILD and QCL - applications of laser in optical/photonic computing

UNIT IV: MATERIALS BEHIND STORAGE APPLICATIONS**9 Hrs**

Introduction- Magnetic materials and its types - Weiss/ Domain theory of Ferro magnetism - Magnetic storage devices - Magnetic bubble formation theory and propagation - Types of storage devices- Floppy disk- Compact Disk - Hard drive- Magnetic drum-super disk-MRAM.

Introduction - superconducting materials - Properties - BCS theory - applications of superconducting materials - SQUID, MAGLEV, cryotron, quantum and supercomputers

UNIT V: MODERN SENSORS AND ADVANCED DISPLAY DEVICES**9 Hrs**

Introduction- Sensors, Types, mechanism, applications of each of pressure sensors - Bourdon tube- strain gauge, temperature sensors, vibration sensors, acoustic sensors, Photo Sensors - LDR and photo diode. Introduction to Display device, Photo Luminescence, LED (OLED, AMOLED), Liquid Crystal Displays, Quantum dot displays, seven/fourteen/sixteen segment displays.

Max.45 Hours**COURSE OUTCOMES:**

CO1: Understand the basics of electromagnetic waves (EMW) in quantum mechanical aspects.

CO2: To analyze the semiconducting materials and how it's used in the manufacturing of computers components.

CO3: Utilize the lasers in various computer applications.

CO4: To know about the modern material's for storage applications.

CO5: Explore the sensors in various applications.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100**

Part A: 10 questions carrying 2 marks each - No choice

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

Exam Duration: 3 Hrs.

20 marks

80 marks

SMEA1102	ENGINEERING DRAWING	L	T	P	Credits	Total Marks
		1	0	4	3	100

COURSE OBJECTIVES:

The aim of the course is to:

- To know the basics of Engineering Graphics.
- To make the student to possess the efficient drafting skill.
- To make the students to understand the importance of sectioning and concept of development.
- To learn about the orthographic and pictorial projections.

UNIT 1 LETTERING, DIMENSIONING AND GEOMETRICAL CONSTRUCTION**9Hrs**

BIS - Lettering - Two systems of dimensioning - Dividing a straight line into any number of equal parts - Bisecting an angle and right angled triangle - Drawing a regular pentagon and hexagon given one side - Conic sections - ellipse, parabola, hyperbola by eccentricity method.

UNIT 2 PROJECTION OF POINTS AND LINES**9Hrs**

Projection - Types of projection - Projection of points lying in four quadrants - Projection of lines (First angle projection only) - Projection of lines parallel and inclined to one or both the planes.

UNIT 3 PROJECTION OF SOLIDS**9Hrs**

Projection of simple solids like prisms, pyramids, cylinder, cone with its axis perpendicular to HP, axis perpendicular to VP, axis inclined to HP.

UNIT 4 SECTION OF SOLIDS**9Hrs**

Purpose of sectioning - Sectional views - Hatching - Section plane perpendicular to one plane and parallel to other plane - Section plane inclined to HP - Section plane inclined to VP - True shape of the section

UNIT 5 DEVELOPMENT OF SURFACES AND ORTHOGRAPHIC PROJECTION**9Hrs**

Need for development of surfaces - Types of development of surfaces - Development of pentagonal and hexagonal prisms - Development of cylinders - Development of pentagonal and hexagonal pyramids - Development of cones.

Orthographic Projection- Free hand sketch -conversion of 3D into 2D

Max.45Hours**COURSE OUTCOMES:**

CO1: Identify the national standards related to the Engineering drawing based on BIS and construct conic sections and polygons.

CO2: Draw orthographic projections of points, lines.

CO3: Draw orthographic projections of solids

CO4: Draw orthographic section of solids and improve the Students visualization skill to develop New products.

CO5: Draw the development of surfaces and its applications in manufacturing industry.

CO6: Draw the orthographic view of solids and learn to convert pictorial into orthographic projection.

80 marks

SCSA1201	FUNDAMENTALS OF DIGITAL SYSTEMS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand number systems and codes
- To illustrate simplified Boolean expressions using Gates.
- To construct combinational logic circuits
- To design sequential logic circuits
- To analyze circuits and latches

UNIT 1 NUMBER SYSTEMS, COMPLIMENTS AND CODES**9 Hrs**

Number Systems - Binary Numbers-Number base conversions-Octal and Hexa Decimal Numbers - Complements - Signed Binary Numbers-Binary Arithmetic -Binary Codes-Decimal Code-Error Detection code-Gray Code- Reflection and Self Complementary codes-BCD number representation - Alphanumeric codes ASCII/EBCDIC -Hamming Code-Generation, Error Correction.

UNIT 2 BOOLEAN ALGEBRA AND LOGIC GATES**9 Hrs**

Axiomatic definitions of Boolean Algebra - Basic Theorems and Properties of Boolean Algebra - Boolean Functions-Canonical and Standard forms-Digital Logic Gates- Simplification of Boolean Expressions:The map method- SOP and POS - NAND and NOR implementation-Don't Cares -The Tabulation Method-Determination and Selection of Prime Implicants.

UNIT 3 COMBINATIONAL LOGIC**9 Hrs**

Design Procedure-Adder - Subtractor - Code Conversion - Analysis Procedure -Multilevel NAND/NOR circuits-Exclusive OR functions - Binary adder and subtractor- Decimal adder - BCD adder - Magnitude Comparator - Decoders - Demultiplexer - Encoder - Multiplexers

UNIT 4 SYNCHRONOUS SEQUENTIAL LOGIC**9 Hrs**

Flip Flops - Analysis of clocked sequential circuit -Reduction and Assignments-Flip flop excitation tables-Design Procedure-Design of counters-Registers-Shift registers-Synchronous Counters-Timing sequences-Algorithmic State Machines-ASM chart-timing considerations-control implementation.

UNIT 5 ASYNCHRONOUS SEQUENTIAL LOGIC AND MEMORY UNIT**9 Hrs**

Circuits with Latches-Analysis procedure and Design Procedure-Reduction of state and Flow tables-Race -Free State Assignment

Max.45Hours**COURSE OUTCOMES:**

On completion of the course, student will be able to-

- CO1: Perform conversions between number systems.
- CO2: Simplify Boolean expressions and model using gates.
- CO3: Discover the principles behind combinational logic circuits used in real time
- CO4: Survey the flip-flops needed for sequential logic circuits design
- CO5: Analyze the sequential logic circuits
- CO6: Discuss about memory unit and arithmetic logic unit.

SCSA1204	PYTHON PROGRAMMING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand why Python is a useful scripting language for developers.
- To learn how to use lists, tuples, and dictionaries in Python programs.
- To build and package Python modules for reusability.
- To understand how to read and write files in Python.
- To learn how to use exception handling in Python applications for error handling.
- To design and program Python applications.

UNIT 1 INTRODUCTION**9Hrs.**

History of Python- Introduction to the IDLE interpreter (shell) - Data Types - Built-in function - Conditional statements - Iterative statements- Input/output functions - Compound Data Types - Nested compound statements- Introduction to Object Oriented Concepts.

UNIT 2 FILES AND EXCEPTIONS HANDLING, MODULES, PACKAGES**9Hrs.**

File Operations - Iterators - Exception handling - Regular Expressions- Creating Modules-Import Statement- Introduction to PIP-Installing Packages via PIP-Using Python Packages.

UNIT 3 GUI PROGRAMMING**9 Hrs.**

GUI Programming in Python - Introduction to GUI library - Layout management - Events and bindings - Fonts - Colours - Canvas - Widgets (frame, label, button, check box, entry, listbox, message, radiobutton, text, spinbox).

UNIT 4 DATABASE AND NETWORK**9Hrs.**

Database (using NoSQL): Connector Module -Cursor - Statements - Exceptions in database. Network connectivity: Socket module - Client - Server - Email - URLAccess.

UNIT 5 CASE STUDY**9Hrs.**

Web Programming using Python Image Processing - Facebook Analysis - Twitter Analysis.

Max. 45 Hrs.**COURSE OUTCOMES**

- CO1: Describe the Numbers, Math functions, Strings, List, Tuples and Dictionaries in Python.
 CO2: Do the decision making and write functions in Python.
 CO3: Explain how to design GUI Applications in Python and evaluate different database operations.
 CO4: Design and develop Client Server network applications using Python.
 CO5: Ability to design real life situational problems and think creatively about solutions of them.
 CO6: Apply the best features of mathematics, engineering and natural sciences to program real life problems.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration: 3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA1203	DATA STRUCTURES	L	T	P	Credits	Total Marks
		3	*	0	3	100

COURSE OBJECTIVES

- To impart the basic concepts of data structures and algorithms
- To be familiar with writing recursive methods.
- To understand concepts about searching and sorting techniques.
- To implement basic concepts about stacks.
- To apply the concepts of queues and its types..

UNIT-1 INTRODUCTION TO ALGORITHMS**9 Hrs**

Introduction Data Structures - Need - classification - operations -Abstract data types (ADT)- Array - characteristics - types - storage representations. Array Order Reversal-Array Counting or Histogram-Finding the maximum Number in a Set, Recursion- Towers of Hanoi-Fibonacci series-Factorial.

UNIT-2 LINKED LISTS**9 Hrs**

Introduction - Singly linked list - Representation of a linked list in memory - Operations on a singly linked list - Merging two singly linked lists into one list - Reversing a singly linked list - Applications of singly linked list to represent polynomial - Advantages and disadvantages of singly linked list - Circular linked list - Doubly linked list - Circular Doubly Linked List

UNIT-3 STACKS**9 Hrs**

Basic Stack Operations - Representation of a Stack using Arrays - Algorithm for Stack Operations - Stack Applications: Reversing list - Factorial Calculation - Infix to postfix Transformation - Evaluating Arithmetic Expressions.

UNIT-4 QUEUES**9 Hrs**

Basic Queue Operations - Representation of a Queue using array - Applications of Queues - Round robin Algorithm - Enqueue - Dequeue - Circular Queues - Priority Queues.

UNIT-5 SEARCHING AND SORTING TECHNIQUES**9 Hrs.**

Basic concepts - List Searches using Linear Search - Binary Search - Fibonacci Search - Sorting Techniques - Insertion sort - Heap sort - Bubble sort - Quick sort - Merge sort - Analysis of sorting techniques.

Max.45Hours**COURSE OUTCOMES:**

On completion of the course, student will be able to:

- CO1: Understand the concept of recursive algorithms.
- CO2: Demonstrate the different types of data structures.
- CO3: Able to understand the operations on linear data structures.
- CO4: Summarize searching and sorting techniques.
- CO5: Choose appropriate data structure as applied to specified problem definition.
- CO6: Understand and implement the applications of linear data structures

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SPHA2101	PHYSICS LAB	L	T	P	Credit	Marks
		0	0	2	1	50

COURSE OBJECTIVES

To introduce experiments in optics, semiconductors, magnetism, thermal physics and quantum mechanics in order to acquire the firsthand information and to realize the basic physics concepts.

LIST OF EXPERIMENTS (Any Eight experiments):**a. Semiconductors**

- 1 Measurement of carrier concentration of semiconductors.-Four probe method
- 2 Determination of Hall coefficient -Hall Effect experiment-.
- 3 Determination of Energy gap of a semiconductor diodes
- 4 Study of I-V characteristics and variation of photocurrent voltage and intensity- by Photo Diode Characteristics.
- 5 Measurement of Resistivity of a semiconductor by 2-probe and 4-probe module.
- 6 Measurement of high resistance measurement by 2-probe module.

b. Optics

- 7 Measurement of wavelength of laser source using diffraction grating.
- 8 Measurement of fiber loss- Optical fiber
- 9 Diffraction Grating using spectrometer - Determination of Wavelength of Light.
- 10 Measurement of speed of light in water and glass medium - minimum deviation from a prism.

c. Magnetism

- 11 Hysteresis loop- Measurement of Hysteresis loss.
- 12 Magnetic susceptibility -Quinke's method

d. Thermal physics

- 13 Characterization of Thermocouple
- 14 Determination of Thermal conductivity of bad conductor-Lee's Disc method

e. Quantum Mechanics

14. Experimental Study of Photoelectric Effect.
15. Recording hydrogen atom spectrum.

COURSE OUTCOMES:

By the end of this course students will be able to

- CO1: To measure the band gap, electrical resistivity and carrier concentration of the given semiconductor.
- CO2: To find Hall coefficients of the given material.
- CO3: To analyse the I-V characteristics of the given photo diode.
- CO4: To determine the wavelength of the given laser light source
- CO5 To measure the Numerical aperture and the optical power loss of the given optical fiber.
- CO6. To measure the magnetic susceptibility of the given liquid sample and to identify dia, para/ferro magnetic liquid sample. To find the B-H loss from the hysteresis loop.

SEIA2202	DIGITAL SYSTEMS LAB	L	T	P	Credits	Total Marks
		0	0	4	2	100

COURSE OBJECTIVES

- To understand the functioning of logic gates and design of combinational circuits using logic gates
- To understand the working of Flip flops and its applications in Shift Register and Counters.

LIST OF EXPERIMENTS:

1. Verification of the Basic gates
2. Verification of Boolean function using logic gates.
3. To Construct and verify the full and half adder using logic gates.
4. To Verify 2x4 Decoder and 4x2 Encoder functionally.
5. Code Converter
 - (a.) BCD to GRAY
 - (b.) GRAY to BINARY
6. Comparator
7. Design and study of Multiplexer and Demultiplexer
8. To construct and study the working of RS flip-flop, D flip-flop, T flip-flop, JK flip-flop
9. To verify various shift register
 - (a) SISO
 - (b) SIPO
 - (c) PISO
 - (d) PIPO
10. Design a counter using suitable flip-flop
 - (a) MOD Counter
 - (b) Ripple Counter
 - (c) Up- Down Counter

COURSE OUTCOMES:

On completion of the course, students are able to

- | | |
|-----|--|
| CO1 | Understand the functioning of logic gates. |
| CO2 | Understand the functioning of flip flops. |
| CO3 | Implement Boolean functions using logic gates. |
| CO4 | Analyze and design combinational circuits |
| CO5 | Implement Shift Registers using flip flops |
| CO6 | Design counters using flip flops. |

SCSA2201	DATA STRUCTURES LAB	L	T	P	Credits	Total Marks
		0	0	4	2	100

COURSE OBJECTIVES:

- To implement linear and non-linear data structures.
- To understand the different operations of search trees.
- To implement graph traversal algorithms.
- To get familiarized to sorting algorithms.
- To implement linear search and binary Search.

LIST OF EXPERIMENTS:

1. Program to insert and delete an element in an array.
2. Program to implement operations on a Singly linked list.
3. Program to implement operations on a doubly linked list.
4. Program to sort the elements using insertion sort.
5. Program to sort the elements using quick sort.
6. Program to sort the elements using merge sort.
7. Program to implement a Stack using an array and Linked list.
8. Program to implement Queue using an array and Linked list.
9. Program to implement Circular Queue.
10. Program to convert an infix expression to postfix expression.
11. Program to implement display elements of a queue according to their priority

COURSE OUTCOMES:

On completion of the course, student will be able to-

- C01: Remembering the concept of data structures through ADT including List, Stack and Queues
 C02: Understand basic concepts about stacks, queues, lists, trees and graphs
 C03: Able to apply and implement various tree traversal algorithms and ensure their correctness
 C04: Ability to analyze algorithms and develop algorithms through step by step approach in solving problems with the help of fundamental data structures.
 C05: Compare and contrast Array based and Link based applications of typical data structures such As Stacks and Queues.
 C06: Design applications and justify use of specific linear data structures for various applications

SMTA1302	DISCRETE MATHEMATICS	L	T	P	Credits	Total Marks
		3	*	0	3	100

COURSE OBJECTIVE

- Analytical, logical thinking and conclusions based on quantitative information will be the main objective of learning this subject.

UNIT1 LOGIC**9Hrs.**

Statements - Truth tables - Connectives - Equivalent Propositions - Tautological Implications - Normal forms - Predicate Calculus - Inference theory for Propositional Calculus and Predicate Calculus.

UNIT2 SET THEORY**9Hrs.**

Basic concepts of Set theory - Laws of Set theory - Partition of set, Relations - Types of Relations: Equivalence relation, Partial ordering relation - Graphs of relation - Hasse diagram - Functions: Injective, Surjective, Bijective functions, Composition of functions, Identity and Inverse functions.

UNIT3 GROUP THEORY**9Hrs.**

Groups - Properties of groups - Semi group and Monoid (definition and examples only) - Subgroups, Cosets - Lagrange's Theorem.

UNIT4 COMBINATORICS**9Hrs.**

Mathematical induction - The basics of counting - The pigeonhole principle - Permutations and combinations - Recurrence relations - Solving linear recurrence relations - Generating functions - Inclusion and exclusion principle and its applications.

UNIT5 GRAPH THEORY**9Hrs.**

Introduction to graphs - Types of graphs (directed and undirected) - Basic terminology - Sub graphs - Representing graphs as incidence and adjacency matrix - Graph Isomorphism - Connectedness in Simple graphs, Paths and Cycles in graphs - Euler and Hamiltonian paths (statement only) - Tree - Binary tree (Definition and simple problems).

Max. 45Hrs.**COURSE OUTCOMES**

On completion of the course, student will be able to

CO1 - Apply it in academic problems and industry/real life problems.

CO2 - Define logic and set theory and to list the tautological implications and types of functions.

CO3 - Categorize and implement the properties of groups.

CO4 - Appraise the solution of mathematical induction and pigeon hole principle.

CO5 - Develop the recurrence relation and generating functions.

CO6 - Evaluate Euler and Hamiltonian paths.

END SEMESTER EXAMINATION QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration: 3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA1301	DATABASE MANAGEMENT SYSTEMS	L	T	P	Credits	Total
		3	0	0	3	100

COURSE OBJECTIVES

- To understand terms related to database design and management
- To gain knowledge in relational model and relational database management system
- To implement relational databases using SQL & My SQL
- To understand database security and performance issues
- To understand the basics of Data warehousing and Data mining

UNIT 1 INTRODUCTION TO DATABASES**9Hrs.**

Databases and database users - Database system concepts and architecture - Data modeling using entity Relationship(ER) model - Enhanced ER model- Relational Model - The Relational Data Model and Relational Database Constraints - The Relational Algebra and Relational Calculus.

UNIT 2 DATABASE DESIGN**9Hrs.**

Overview of the Hierarchical Data Model - Overview of the Network Data Model - Relational database design: Mapping ER Model to Relational Model - Commercial query languages: QBE - Functional dependency - Normalization

UNIT 3 QUERY PROCESSING**9Hrs.**

SQL Queries --Embedded SQL -My SQL: Basics, Queries in MySQL and Algorithms for Query Processing and Optimization - Introduction to Transaction Processing Concepts and Theory - Concurrency control techniques.

UNIT 4 RECOVERY AND SECURITY**9Hrs.**

Database Recovery Techniques - Database Security -Debate on the distributed databases and Client- Server Architecture with reference to Indian Railway Reservation System.

UNIT 5 OBJECT DATABASE AND CURRENT TRENDS**9Hrs.**

Concepts for Object Database - Emerging Database Technologies and Application - Introduction to Data warehousing & Data mining -Applications of Data mining.

Max.45Hours**COURSE OUTCOMES:**

on completion of the course the student will be able to

- CO1: Design ER-models to represent simple database application scenarios
- CO2: Ability to understand and design data modeling using Entity-Relationship model
- CO3: Implement SQL to a broad range of query and data update problems
- CO4: Articulate socio-economic applications of distributed databases and use database recovery mechanisms
- CO5: Familiar with data warehousing and data mining applications
- CO6: Apply Normalization techniques to normalize and improve the database design

Exam Duration:3 Hrs.

20 marks

80 marks

SCSA1302	THEORY OF COMPUTATION	L	T	P	Credits	Total Marks
		3	*	0	3	100

COURSE OBJECTIVES

- To introduce Automata Theory and Regular Languages.
- To understand Context Free languages and recognizers for different languages.
- To design Turing Machines for various languages.
- To understand the concepts involved in software development.
- To gain knowledge on undecidable problems.

UNIT 1 FINITE AUTOMATA AND REGULAR LANGUAGES**9 Hrs.**

Finite automata and regular languages - Regular languages and regular expressions - Finite automata - Non-determinism and Kleene's theorem - Non-deterministic finite automata and NFA with null transition.

UNIT 2 CONTEXT-FREE LANGUAGES AND NORMAL FORMS**9 Hrs.**

Context-free grammars - Definition - More examples - Union, concatenations, and *'s of CFLs - Derivation trees and ambiguity - Unambiguous CFG for algebraic expressions - Normal Forms - CNF - GNF.

UNIT 3 PUSH DOWN AUTOMATA**9 Hrs.**

Pushdown automata - Introduction - Definition - Deterministic pushdown automata - PDA corresponding to a given context-free grammar - Context-free Grammar corresponding to PDA. Pumping Lemma for CFG.

UNIT 4 TURING MACHINES**9 Hrs.**

Turing machines - Models of computation and the Turing thesis - Definition of TM and TM as language acceptor - Non-deterministic TM and Deterministic TM - Universal TM.

UNIT 5 RECURSIVE LANGUAGES AND UNDECIDABILITY**9 Hrs.**

Recursively enumerable and recursive languages - Properties of Recursively enumerable and recursive languages - Enumerating a language. Introduction to Undecidability - Halting problem - Undecidability of Post correspondence problem (PCP) - Modified PCP - Rice Theorem.

Max. 45 Hrs.**COURSE OUTCOMES**

On completion of the course, student will be able to

- CO1 - Identify, analyze and compute a solution to a problem.
- CO2 - Interpret data using computational theory.
- CO3 - Determine whether a language is context free or not.
- CO4 - Design a Turing Machine for a given problem.
- CO5 - Apply the theoretical knowledge the design of compilers.
- CO6 - Identify the limitations of some computational models.

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA1304	ADVANCED DATA STRUCTURES	L	T	P	Credits	Total Marks
		3	*	0	3	100

COURSE OBJECTIVES

- To acquire knowledge of organizing the data in non linear fashion.
- To get the idea of balancing the height of trees to optimize the structure and search time.
- To learn the process of establishing the network with various nodes with minimum cost & finding the shortest path.
- To understand the method of designing the table data structure and its applications.

UNIT1 BASIC TREE CONCEPTS**9Hrs.**

Trees- Ordinary and Binary trees terminology, Properties of Binary trees, Implementation using Array and Linked list - Binary tree ADT representations, recursive and non recursive traversals - Binary Search Tree - Insertion and Deletion.

UNIT2 ADVANCED TREE CONCEPTS**9Hrs.**

Threaded Binary Trees, AVL Tree, B-tree Insertion and deletion, Splay trees - Heap trees - Heapify Procedure, Tries.

UNIT3 GRAPH CONCEPTS**9Hrs.**

Terminology, Representation using Array and Linked List - Types of graphs - Graph traversals - BFS and DFS - Applications.

UNIT4 ADVANCED GRAPH CONCEPTS**9Hrs.**

Minimum Spanning Tree - Kruskal's, Prim's and Sollin's Algorithm - Shortest path using Dijkstra's, Bellman Ford and Floyd Warshall Algorithm.

UNIT5 TABLES AND SETS**9Hrs.**

Rectangular tables - Jagged tables - Inverted tables - Symbol tables - Static tree tables - Dynamic tree tables - Hash tables. Sets: Representation - Operations on sets - Applications.

MAX. 45 Hours.**COURSE OUTCOMES:**

On completion of the course, student will be able to:

- C01: Design and implement the various non-linear data structures and perform the intended operations.
 C02: Understand the strength of balancing the height of the trees.
 C03: Analyze the time complexity of various non linear data structures.
 C04: Apply the algorithms to find the shortest path & to connect the nodes with minimum cost.
 C05: Design the table and applying the table for many applications.
 C06: Compare and identify the usage of different data structures

SITA1301	PROGRAMMING IN JAVA	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To introduce Object Oriented concepts in Java
- To understand Packages, Interfaces and Multithreading Concepts.
- To understand lang, io packages.
- To understand the concepts involved in internet application development.
- To understand the internet application design using swing controls.

UNIT 1 INTRODUCTION TO JAVA**9 Hrs.**

Classes and Objects - Class Fundamentals - Declaring Objects - Methods - Constructors - Garbage Collection. Inheritance - Basics - Using Super - Method Overriding - Abstract Classes - Using final with inheritance. String Handling - String class - String buffer class.

UNIT 2 PACKAGES, INTERFACES AND THREADS**9Hrs.**

Introduction to Packages - User Defined Packages - Importing packages - Access protection - Interfaces - Exception Handling - Exception Types - Using try, catch, throw, throws and finally - Multithreading - JavaThreadModel - Main thread - Creating multiple thread - Thread priorities - Synchronization.

UNIT 3 LANG AND IO PACKAGES**9 Hrs.**

Java.lang package - Wrapper Classes- Simple type wrappers - Using clone() and the Cloneable Interface -IO Package - Introduction - Input Stream and Output Stream classes - Data Output Stream and Data Input Stream classes - FileInputStream - FileOutputStream. - Reader and Writer Classes - FileReader and FileWriter

UNIT 4 APPLET PROGRAMMING AND EVENT HANDLING**9 Hrs.**

Applet Class - Applet basics - HTML APPLET tag - Passing parameters to applets -Delegation Event Model - Handling Mouse and Keyboard Events - Adapter Classes.

UNIT 5 SWINGS AND DATABASE CONNECTIVITY**9 Hrs.**

Introduction-JApplet Class-JLabel Control - JTextField Control -JButton Control -JCheckbox Control-JRadioButton Control - J ComboBox Control - JtappedPane Control-J ScrollPane Control - JTable.Introduction -Establishing Connection - Creation of Data Tables - Entering Data into the Tables- Table Updating .

Max.45 Hours**COURSE OUTCOMES :**

On completion of the course the student will be able to

- CO1: Develop application programs using java object oriented concepts
- CO2: Implement the interface, package and multithread concepts
- CO3: Implement various built in packages and its applications
- CO4: Develop web based applications using applet programming
- CO5: Implement Swing concepts in real time applications.
- CO6: Design the internet applications frontend and connect with backend using database connectivity.

80 marks

SCSA1319	DESIGN THINKING AND INNOVATIONS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To introduce the idea of Human-centered design and design thinking.
- To understand the concept of empathy and its technique.
- To understand observation phase and insight concepts in design thinking.
- To leverage the use of prototype in design thinking
- To design business models using the design thinking innovations.

UNIT 1 HUMAN-CENTERED DESIGN**9 Hrs.**

Introduction to Human-centered Design - Applications of Human-centered Design - Design Process - Mindsets of Human-centered designer - Principles and process of Design Thinking - Planning a Design Thinking Project

UNIT 2 INTERVIEWING & EMPATHY-BUILDING TECHNIQUES**9 Hrs.**

Introduction to Empathy - Practicing Empathy - Empathy vs. Sympathy - Methods for Empathetic design - Tips for Interviews - Empathy Interviews - Understanding and defining the problem

UNIT 3 MAKING SENSE OF OBSERVATIONS & INSIGHTS**9 Hrs.**

Observation Phase - Tips for observing - Insights definition - Problems with Insights - Case study: Insight problems in the history of aviation - Creativity process, principles and techniques - Evaluation of ideas

UNIT 4 DEVELOPING AND TESTING PROTOTYPES**9 Hrs.**

Role of Prototype in design thinking - Types of prototyping - Guidelines for prototyping - Lean Startup Method for Prototype Development - Visualization and presentation techniques - Testing prototypes: Feedbacks and Maximize learning

UNIT 5 DEFINING & TESTING BUSINESS MODELS & BUSINESS CASES**9 Hrs.**

Business Model Definition - Design thinking to design business model - Innovation in Business Model - Pursuing innovation in business - Business model innovations cases - Kano Model - Desirability Testing.

Max.45 Hrs.**COURSE OUTCOMES**

On completion of the course the student will be able to

CO1: Understand and apply human-centered design process and planning of design thinking project

CO2: Use empathetic design in the interview process

CO3: Identify need for observations and insights problems and come up with creative ideas in design thinking

CO4: Understand, build and test the prototypes

CO5: Use design thinking concepts to build successful business models.

CO6: Implement innovation techniques in business models.

80 marks

SCSA2301	DATABASE MANAGEMENT SYSTEMS LAB	L	T	P	Credits	Total Marks
		0	0	4	2	100

COURSE OBJECTIVES

1. To instill sound understanding on the fundamentals of DBMS.
2. To lay a formal foundation on the relational model.
3. To introduce the basic concepts of SQL as a universal database language.
4. To understand the necessity for normalization.
5. To formulate problem statements for real life problems.

LIST OF EXPERIMENTS:

1. Data Definition Language (DDL).
2. Data Manipulation Language (DML)
3. Data Control Language (DCL)
4. Constraints and Built-in functions.
5. Joins and Group-by functions.
6. PL/SQL programs using functions
7. PL/SQL programs using procedures
8. PL/SQL programs using triggers
9. Developing GUI applications using PHP.
 - Student Information System.
 - Inventory Management.
 - Payroll Processing.

COURSE OUTCOMES:

- CO1: Understand, appreciate and effectively explain the underlying concepts of database technologies
- CO2: Populate and query a database using SQL DML/DDL commands.
- CO3: Declare and enforce integrity constraints on a database.
- CO4: Retrieve data from multiple tables.
- CO5: Programming PL/SQL including stored procedures, stored functions, triggers.
- CO6: Design and build a GUI application using PHP

SITA2302	PROGRAMMING IN JAVA LAB	L	T	P	Credits	Total Marks
		0	0	4	2	100

COURSE OBJECTIVES

- To implement Object Oriented concepts in Java
- To implement Packages, Interfaces and Multithreading Concepts.
- To develop applications using lang and io packages.
- To design web based application.
- To design GUI application design using swing controls.

CYCLE -1

1. Write a Java program using Classes and Objects.
2. Write a java Program using various types of Constructors.
3. Implement the concept of following kinds of Inheritance for Employee Application
Single Inheritance.
Multilevel Inheritance.
Hierarchical Inheritance.
4. Write a Java Program to access various members of super class using Super Keyword
5. Write a java program that illustrates the example for abstract class.
7. Write a java program to find area of various shapes using interface.
8. Write a java Program to create custom package to implement calculator operations.
9. Write a java program that describes the exception handling mechanism.
10. Write a java program that describes the user defined exception.
11. Write a program to create thread by extending Thread Class or by implementing Runnable Interface.
12. Write a java program to create copy of a given object using ICloneable interface.

Cycle2

13. Write a Java Program to implement Wrapper classes and their methods.
14. Write a java program for handling input and output operations using,
 - a. Input Stream and Output Stream classes
 - b. Reader and Writer Classes
 - c. Data Output Stream and Data Input Stream classes.
15. Write a java program that describes the life cycle of an applet.
16. Write a java program to pass parameters to Applet and display the output.
17. Write a java program for event handling using awt controls
18. Write a Java program to handle Mouse and Key events
19. Create a Java Application Programming Interface by using swing controls
20. Write a java program for database connectivity using JDBC.

COURSE OUTCOMES:

On completion of the course the student will be able to

- CO1: Ability to implement application programs using java object oriented concepts
 CO2: Able to implement interface, package and multithread concepts
 CO3: Understand various built in packages and its applications
 CO4: Knowledge on designing web based applications using applet programming
 CO5: Create applications using swing controls in real time applications.
 CO6: Able to connect frontend and backend using database connectivity.

SCSA2302	CODE OPTIMIZATION AND DEBUGGING I	L	T	P	Credits	Total Marks
		0	0	2	1	100

COURSE OBJECTIVES

- To improve the intermediate code by making it consume fewer resources
- To get the faster running machine code
- To improve the consistency of the code
- To enhance the readability of the code and easier code maintenance
- To improve the work flow of the code

LIST OF EXPERIMENTS:

1. Implement Built In Function and Libraries using python
2. Implement Optimizing loop using python
3. Profiling CPU usage using python
4. Profiling memory usage using python
5. Implement query optimization in DBMS
6. Implement heuristics in query optimization in DBMS
7. Implement factorial of given number using memorization in data structure
8. Implement Divide and conquer method in data structure
9. Implement hybrid stable sorting algorithm in data structure
10. Implement linked list with improving the time complexity in data structure.

COURSE OUTCOMES:

After successful completion of the course, student will be able to

- CO1: Understand importance of code optimization
 CO2: Apply time complexity and space complexity of the algorithm for improving optimization.
 CO3: Analyse and appreciate variety of performance measures for various optimization problems
 CO4: Learn efficient computational procedures to solve optimization problems
 CO5: Be able to use programming languages to implement optimization algorithms
 CO6: Be able to reduce the execution time of code by applying proper coding technique.

SMTA1402	PROBABILITY AND STATISTICS (CSE and IT)	L	T	P	CREDITS	TOTAL MARKS
		3	*	0	3	100

COURSE OBJECTIVE:

The ability to identify, reflect upon, evaluate and apply different types of information and knowledge to form independent judgments. Analytical, logical thinking and conclusions based on quantitative information will be the main objective of learning this subject.

UNIT I PROBABILITY CONCEPTS AND RANDOM VARIABLE**9 Hrs**

Probability Space - Events - Axiomatic approach to Probability - Conditional Probability - Independent Events - Baye's Theorem - Random Variables - Functions of Random Variables and their Probability Distribution.

UNIT II PROBABILITY DISTRIBUTION**9 Hrs**

Discrete Distributions: Binomial, Poisson and Geometric - Continuous Distributions: Uniform, Exponential and Normal - Applications only (no derivation).

UNIT III TWO DIMENSIONAL RANDOM VARIABLES**9 Hrs**

Joint Probability distributions- Marginal and Conditional Distributions- Transformation of Random Variables.

UNIT IV CORRELATION AND REGRESSION**9 Hrs**

Correlation- Linear regression- Multiple and Partial Correlation- Curve Fitting- Method of Least Squares- Fitting of the Curve of the form $y = a + bx$, $y = a + bx + cx^2$, $z = ax + by + c$.

UNIT V ANALYSIS OF VARIANCE AND STATISTICAL QUALITY CONTROL**9 Hrs**

Review of F-test- Design of experiments : Completely Randomized Design, Randomized Block Design and Latin Square Design- Statistical Quality Control: Mean, Range, p, np, c-charts.

MAX. 45 Hours**COURSE OUTCOMES:**

After completing this course, students will understand the following concepts thoroughly and will be able to apply it in academic problems and industry/ real life problems.

CO1: Define probabilities, probability distributions. List the discrete and continuous distributions

CO2: Explain functions of random variables and their probability distributions. Explain and derive the parameters of the distributions.

CO3: Choose appropriate probability theorem and solve the problems. Prepare the cumulative distribution for random variables. Application of the parameters of distributions. Sketch the control charts and point out the results based on the charts.

CO4: Distinguish correlation and regression. Categorize the regression coefficients.

CO5: Evaluate the constants involved in curves by the method of least squares. Evaluate the correlation coefficients. Compare the variances of design of experiments

CO6: Construct and develop the transformations of random variables. Also determine their mean and variances by expectations.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100**

Part A: 10 questions carrying 2 marks each - No choice

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

Exam Duration: 3 Hrs.

20 marks

80 marks

SCSA1401	OBJECT ORIENTED ANALYSIS AND SYSTEM ENGINEERING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES:

- To Understand the fundamentals of Object Oriented System Development
- To understand the object oriented methodologies .
- To use UML in requirements elicitation and designing.
- To understand concepts of relationships and aggregations.
- To test the software against its requirements specification

UNIT 1 AN OVERVIEW OF OBJECT ORIENTED SYSTEM DEVELOPMENT**9 Hrs.**

Introduction - Object Oriented System Development Methodology - Why Object Orientation - Overview of Unified Approach - Object Basics: Object Oriented Philosophy - Objects - Classes - Attributes - Object Behavior and Methods, Messages and Interfaces, Encapsulation and Information Hiding - Class Hierarchy - Polymorphism - Object Relationships and Associations - Aggregations and Object Containment - Object Identity - Static and Dynamic Binding - Persistence. Object-oriented CASE tools, Object Oriented Systems Development Life Cycle: Software Development Process - Building High Quality Software -Use case Driven Approach – Reusability.

UNIT 2 OBJECT ORIENTED METHODOLOGIES**9 Hrs.**

Rumbaugh et al.'s Object Modeling Technique - Booch Methodology - Jacobson et al. Methodologies - Patterns - Framework - Unified approach - Unified Modeling Language: Static and Dynamic Model - UML Diagrams - UML Class Diagram - UML Use Case -Case study- Use case Modelling - Relating Use cases - include, extend and generalization - When to use Use-cases- UML Dynamic Modeling -Case study- UML Extensibility - UML Metamodel.

UNIT 3 OBJECT ORIENTED ANALYSIS**9 Hrs.**

Business Object Analysis - Use Case Driven Object Oriented Analysis - Business Process Modeling - Use Case model - Developing Effective Documentation - Object Analysis Classification: Classification Theory - Noun Phrase Approach - Common Class Patterns Approach - Use-Case Driven Approach - Classes Responsibilities and Collaborators - Naming Classes - Identifying Object Relationships, Attributes and Methods: Association - SuperSubclass Relationships - A-part of Relationships.

UNIT 4 OBJECT ORIENTED DESIGN**9 Hrs.**

Object Oriented Design Process - Object Oriented Design Axioms - Corollaries - Designing Classes: Object Constraint Language - Process of Designing Class - Class Visibility - Refining Attributes - Access Layer: Object Store and Persistence - Database Management System - Logical and Physical Database Organization and Access Control - Distributed Databases and Client Server Computing - Object Oriented Database Management System - Object Relational Systems - Designing Access Layer Classes - View Layer: Designing View Layer Classes - Macro Level Process - Micro Level Process - Purpose of View Layer Interface - Prototyping the user interface.

UNIT 5 SOFTWARE QUALITY**9 Hrs.**

Software Quality Assurance- Impact of Object Orientation on Testing - Develop Test Cases and Test Plans - System Usability and Measuring User Satisfaction: Usability Testing - User Satisfaction Testing.

MAX. 45 Hours.**COURSE OUTCOMES:**

On completion of the course the student will be able to

- CO1: Understand the basics object model for System development.
- CO2: Understand the object Oriented Methodologies
- CO3: Express software design with UML diagrams
- CO4: Understand the concept of Relationships
- CO5: Design software applications using OO concepts.
- CO6: Understand the various testing methodologies for OO software

END SEMESTER EXAM QUESTION PAPER PATTERN

Max. Marks: 100

Part A: 10 questions carrying 2 marks each - No choice

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

Exam Duration: 3 Hrs.

20 marks

80 marks

SITA1401	DATA COMMUNICATION AND COMPUTER NETWORKS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand the network architecture and protocols supported for connecting devices in a network.
- To gain the knowledge of framing in data link layer.
- To learn the functions of network layer and the routing strategies with their associated protocols.
- To introduce the protocols used for end to end packet delivery in transport layer.
- To understand the application layer protocols.

UNIT1 DATA COMMUNICATION**9 Hrs.**

Introduction to data communication - Network protocols & standards - Line configuration - Topology - Transmission mode - Categories of networks - OSI model - Layers of OSI model - TCP/IP Model - Transmission media - Guided media - Unguided media - Switching - Circuit Switching - Packet Switching.

UNIT 2 DATALINK LAYER**9 Hrs.**

Error detection and correction - Line Discipline - Flow Control - Error control - Medium Access Control - Ethernet - CSMA/CD - Wireless LAN - CSMA/CA - IEEE 802.11, Bluetooth.

UNIT 3 NETWORK LAYER**9 Hrs**

Routing - Distance Vector Routing - Link State Routing - Addressing - Subnetting - IPV4 - IPV6 - ARP - RARP - ICMP - IGMP - DHCP - Networking Devices - Repeaters - Switches - Bridges - Routers - Gateways.

UNIT 4 TRANSPORT LAYER**9 Hrs.**

TCP - UDP - Connection Management - Flow Control - Retransmission - Congestion Control - Leaky bucket algorithm - Detection and Avoidance.

UNIT 5 APPLICATION LAYER**9 Hrs.**

Message Handling System (MHS) - FTAM - Virtual Terminal (VT) - Domain Name System - FTP - WWW and HTTP - SNMP - SMTP - POP3 - IMAP - MIME - TELNET

MAX. 45 Hours.**COURSE OUTCOMES:**

On completion of the course, student will be able to

- CO1: Describe the architecture of a computer network and explain how each device in a network communicates with each other.
- CO2: Explain packet collision in the link layer and how they are corrected.
- CO3: Design a routing protocol in a network and demonstrate how data packet will reach to the intended destination.
- CO4: Implementation of flow control mechanism to regulate the traffic in a network.
- CO5: Describe IP addressing and explain its functions.
- CO6: Recognize various application layer protocols and its functions.

80 marks

SCSA1403	DESIGN AND ANALYSIS OF ALGORITHMS	L	T	P	Credits	Total Marks
		3	*	0	3	100

COURSE OBJECTIVES

- To analyze the performance of algorithms under various scenarios.
- To learn mathematical background for algorithm analysis & solving the recurrence equations.
- To learn various algorithm design techniques.
- To understand and apply the algorithms

UNIT 1 INTRODUCTION**9 Hrs.**

Fundamentals of Algorithmic Problem Solving - Time Complexity - Space complexity with examples - Growth of Functions - Asymptotic Notations: Need, Types - Big Oh, Little Oh, Omega, Theta - Properties - Complexity Analysis Examples - Performance measurement - Instance Size, Test Data, Experimental setup.

UNIT 2 MATHEMATICAL FOUNDATIONS**9 Hrs.**

Solving Recurrence Equations - Substitution Method - Recursion Tree Method - Master Method - Best Case - Worst Case - Average Case Analysis - Sorting in Linear Time - Lower bounds for Sorting: - Counting Sort - Radix Sort - Bucket Sort

UNIT 3 BRUTE FORCE AND DIVIDE-AND-CONQUER**9 Hrs.**

Brute Force:- Travelling Salesman Problem - Knapsack Problem - Assignment Problem - Closest Pair and Convex Hull Problems - Divide and Conquer Approach:- Binary Search - Quick Sort - Merge Sort - Strassen's Matrix Multiplication.

UNIT 4 GREEDY APPROACH AND DYNAMIC PROGRAMMING**9 Hrs.**

Greedy Approach:- Optimal Merge Patterns- Huffman Code - Job Sequencing problem- -- Tree Vertex Splitting Dynamic Programming:- Dice Throw-- Optimal Binary Search Algorithms.

UNIT 5 BACKTRACKING AND BRANCH AND BOUND**9 Hrs.**

Backtracking:- 8 Queens - Hamiltonian Circuit Problem - Branch and Bound - Assignment Problem - Knapsack Problem:- Travelling Salesman Problem - NP Complete Problems - Clique Problem - Vertex Cover Problem .

MAX. 45 Hours**COURSE OUTCOMES:**

On completion of the course the student will be able to

- CO1:Determine the suitable algorithmic design technique for a given problem.
 CO2:Identify the limitations of algorithms in problem solving
 CO3:Analyze the efficiency of the algorithm based on time and space complexity.
 CO4:Implement asymptotic notations to analyze worst-case and average case running times of algorithms.
 CO5:Interpret the fundamental needs of algorithms in problem solving.
 CO6:Describe the various algorithmic techniques and its real time applications.

END SEMESTER EXAM QUESTION PAPER PATTERN

Max. marks:100

Exam Duration:3 Hrs.

Part A: 10 question of 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SBAA1408	ECONOMICS FOR ENGINEERS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To enable students to understand the fundamental micro and macro-economic concepts applicable to engineering
- To learn the techniques of estimation, planning and policies in economic decision making

UNIT 1 INTRODUCTION**9 Hrs.**

Introduction to Economics - Concept of Engineering Economics - Law of Demand & Law of Supply - Determinants of Demand & Supply - Elasticity of demand - Concept of Utility - Law of diminishing marginal utility - Equi-Marginal Utility - consumer's Surplus analysis - Indifference Curve Approach - Budget Line - Consumer's Equilibrium.

UNIT 2 PRODUCTION, COST ANALYSIS AND PRICING**9 Hrs.**

Production function - returns to scale - production optimization - least cost input - Isoquants - Managerial uses of production function. Cost concepts - cost function - Determinants of cost - Short run and long run cost curves - Cost output decisions - Estimation of cost - Pricing under different market structures - price discrimination - pricing methods in practice.

UNIT 3 MONEY, BANKING AND TRADE**9 Hrs.**

Money- nature and functions - Inflation and Deflation - Kinds of Banking - commercial banks - Central banking - Credit instrument - Monetary Policy - International trade - Balance of trade and Balance of Payments - taxation - Direct and Indirect taxes - GST- Impact and Incidence of tax- Concept of National Income - Features with reference to developing countries.

UNIT 4 PLAN AND POLICIES FOR ECONOMIC GROWTH IN INDIA**9 Hrs.**

Brief overview of post-independence period - plans - Five years plans and its role on Economic growth - Role of Industry in economic development - Industrial Policies in India - New Economic Reforms - New industrial Policy - MSME - concept of unemployment - concept of poverty - concept of urbanization.

UNIT 5 ESTIMATION**9 Hrs.**

Estimation of Material - Labor and Overhead Cost - Allocation of Overheads - Estimation for different types of jobs - Use of relevant Indian Standard Specifications - Bar bending Schedules - Mass haul Diagrams - Estimating Earthwork and Foundations - Estimating Concrete and Masonry - Finishes - Interiors - MEP works - BIM and quantity take-offs.

Max. 45 Hrs.**COURSE OUTCOMES**

On completion of the course the student will be able to

CO1: Understand Economics in general, Economics of India particularly for public sector agencies and private sector businesses

CO2: Perform and evaluate present worth, future worth and annual worth analyses on one of more economic alternatives

CO3: Carry out and evaluate benefit/cost, life cycle and breakeven analyses on one or more economic alternatives

CO4: Understand the technical specifications for various works to be performed for a project and how they impact the cost of a structure

CO5: Quantify the worth of a structure by evaluating quantities of constituents, derive their cost rates and build up the overall cost of the structure

CO6: Understand how competitive bidding works and how to submit a competitive bid proposal

SAIC4003	UNIVERSAL HUMAN VALUES	L	T	P	Credits	Total Marks
		2	1	0	3	100

COURSE OBJECTIVES

- To develop a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence
- To understand (or developing clarity) the harmony in the human being, family, society and nature/existence
- To strengthen self-reflection
- To develop commitment and courage to act

MODULE 1: COURSE INTRODUCTION - NEED, BASIC GUIDELINES, CONTENT AND PROCESS FOR VALUE EDUCATION

1. Purpose and motivation for the course, recapitulation from Universal Human Values-I
 2. Self-Exploration-what is it? - Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-exploration
 3. Continuous Happiness and Prosperity- A look at basic Human Aspirations
 4. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority
 5. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario
 6. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.
- Practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking.

MODULE 2: UNDERSTANDING HARMONY IN THE HUMAN BEING - HARMONY IN MYSELF!

7. Understanding human being as a co-existence of the sentient 'I' and the material 'Body'
 8. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility
 9. Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer)
 10. Understanding the characteristics and activities of 'I' and harmony in 'I'
 11. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail
 12. Programs to ensure Sanyam and Health.
- Practice sessions to discuss the role others have played in making material goods available to me. Identifying from one's own life. Differentiate between prosperity and accumulation. Discuss program for ensuring health vs dealing with disease.

MODULE 3: UNDERSTANDING HARMONY IN THE FAMILY AND SOCIETY- HARMONY IN HUMAN-HUMAN RELATIONSHIP

13. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship
 14. Understanding the meaning of Trust; Difference between intention and competence
 15. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship
 16. Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals
 17. Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family.
- Practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives.

MODULE 4: UNDERSTANDING HARMONY IN THE NATURE AND EXISTENCE - WHOLE EXISTENCE AS COEXISTENCE

18. Understanding the harmony in the Nature
 19. Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self regulation in nature
 20. Understanding Existence as Co-existence of mutually interacting units in all-pervasive space
 21. Holistic perception of harmony at all levels of existence.
- Practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

MODULE 5: IMPLICATIONS OF THE ABOVE HOLISTIC UNDERSTANDING OF HARMONY ON PROFESSIONAL ETHICS

22. Natural acceptance of human values

23. Definitiveness of Ethical Human Conduct
 24. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order
 25. Competence in professional ethics: a. Ability to utilize the professional competence for augmenting universal human order b. Ability to identify the scope and characteristics of people friendly and eco-friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems.
 26. Case studies of typical holistic technologies, management models and production systems
 27. Strategy for transition from the present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations
 28. Sum up.
- Practice Exercises and Case Studies will be taken up in Practice (tutorial) Sessions eg. To discuss the conduct as an engineer or scientist etc.

TOTAL: 28 LECTURES AND 14 PRACTICE SESSIONS

COURSE OUTCOMES

By the end of the course, students are expected

- To become more aware of themselves, and their surroundings (family, society, nature)
- They would become more responsible in life, and in handling problems with sustainable solutions, while keeping human relationships and human nature in mind
- They would have better critical ability
- They would also become sensitive to their commitment towards what they have understood (human values, human relationship and human society)
- It is hoped that they would be able to apply what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction

ASSESSMENT:

Assessment by faculty mentor	: 10 marks
Self-assessment	: 10 marks
Assessment by peers	: 10 marks
Socially relevant project/Group Activities/Assignments	: 20 marks
Semester End Examination	: 50 marks

SITA2401	NETWORKING LAB	L	T	P	Credits	Total Marks
		0	0	4	2	100

COURSE OBJECTIVES

- To understand how to implement socket programming.
- To be familiar with simulation tools.
- To understand how to create applications using TCP and UDP.
- To gain Knowledge on various networking protocols.

LIST OF EXPERIMENTS:

1. Study of Socket Programming and Client - Server model.
2. Creation of Date Server, and also print the client's address on the Server.
3. Applications using TCP Sockets like
 - a. Echo client and echo server
 - b. Chat
 - c. File Transfer
4. Applications using TCP and UDP Sockets like
 - a. DNS
 - b. SNMP
 - c. File Transfer
5. Calculation of Checksum for packet data and file.
6. Program to implement HTTP Protocol.
7. Implementation of Stop and Wait Protocol and Sliding Window Protocol.
8. Simulating PING and TRACEROUTE commands.
9. Study of Network simulator (NS) and Simulation of Congestion Control Algorithms using NS.
10. Perform a case study about the different routing algorithms to select the network path with its optimum and economical during data transfer.
 - i. Link State routing
 - ii. Flooding
 - iii. Distance vector
11. WiFi Simulation.

COURSE OUTCOMES:

On completion of the course, student will be able to

- CO1: Analyze the performance of the protocols in different layers.
 CO2: Implement various protocols.
 CO3: Design with simulation tools.
 CO4: Analyze various routing algorithms.
 CO5: Construct Wi-Fi model.
 CO6: Understand socket programming.

SCSA2401	OBJECT ORIENTED ANALYSIS AND SYSTEM ENGINEERING LAB	L	T	P	Credits	Total Marks
		0	0	2	1	100

COURSE OBJECTIVES

- To understand the object oriented concepts
- To understand the concept of UML Diagrams.
- To train in Rational ROSE and Agro UML Tool
- To capture the requirements specification for an intended software system
- To draw the UML diagrams for the given specification
- To map the design properly to code

LIST OF EXPERIMENTS:

1. Study experiment - Object Oriented Concepts
2. Study of UML diagrams - aim and scope of diagrams.
3. Study of CASE tools - Agrium and Rational ROSE
4. Draw standard UML diagrams using an UML modelling tool for a given case study and map design to code
 - Identify a software system that needs to be developed.
 - Document the Software Requirements Specification (SRS) for the identified system.
 - Identify the actors and use cases and develop the Use Case model.
 - Identify the classes and develop a Class Diagram by specifying the attributes and methods. The Relationships between the classes are identified to indicate how the classes are related to each other.
 - Using the identified scenarios, find the interaction between objects and represent them using UML Sequence and Collaboration Diagrams.
 - Draw relevant State Chart and Activity Diagrams for the same system.
 - Generate the Code Sequence for
 - a. Student Information System
 - b. Online Ticket Reservation system
 - c. Employee Payroll system
 - d. Online Banking Application
 - e. ATM processing
 - f. Stock Maintenance
 - g. Library Management
 - h. Exam registration
 - i. Book bank

COURSE OUTCOMES :

On completion of the course the student will be able to:

- CO1: Identify the Requirement specification of a given problem.
- CO2: Apply the concept of UML diagrams to perform analysis and design using the Tools.
- CO3: Perform OO analysis and design for a given problem specification.
- CO4: Generate the code
- CO5: Test the compliance of the software with the SRS.

SCSA2402	CODE OPTIMIZATION AND DEBUGGING II	L	T	P	Credits	Total Marks
		0	0	2	1	100

COURSE OBJECTIVES

- To analyze the programming logic and apply the appropriate design approach
- To optimize the speed of the program by using proper utilization of available memory
- To make use of performance tools for tracking the application.
- To have a capacity to analyze and design software systems, components to meet desired needs
- To have a working ability and grasping attitude to design and conduct object-oriented analysis

LIST OF EXPERIMENTS

1. Implement minimum heap allocation in java
2. Implement string builder in java
3. Implement concurrency control using java
4. Checking the current log level using java
5. Implement Garbage collection using java
6. Implement grid line in object oriented analysis and design
7. Implement grid with two sets of diagonal lines in object oriented analysis and design
8. Implement concurrency in object oriented analysis and design
9. Implement design optimization for removing non usable associations in object oriented analysis and design
10. Implement sparing and storing derived attributes associations in object oriented analysis and design.

COURSE OUTCOMES:

- CO1: Understand the impact of performance hits during application runtime.
 CO2: Implement optimal functions for improving the performance
 CO3: Analyze the proper utilization of memory for code
 CO4: Design experiments using UML, as well as to analyze and evaluate their models
 CO5: Discussing and understanding analysis and design heuristics that are involved in the course
 CO6: Students will learn and understand how to map one style of diagrammatic notations into another

SCSA1301	OPERATING SYSTEMS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To have an overview of different types of operating systems.
- To understand the concept of process management.
- To understand the concept of storage management.
- To understand the concept of I/O and file systems.

UNIT 1 INTRODUCTION**9Hrs.**

Introduction - Operating system structures - System components - OS services - System calls - System structure - Resources Processes - Threads - Objects - Device management - Different approaches - Buffering device drivers.

UNIT 2 PROCESS MANAGEMENT**9Hrs.**

Processes - Process concepts - Process scheduling - Operations on processes - Cooperating processes - CPU scheduling - Basic concepts - Scheduling criteria - Scheduling algorithms - Preemptive strategies - Non-preemptive strategies

UNIT 3 SYNCHRONIZATION AND DEADLOCKS**9Hrs.**

The critical section problem - Semaphores - Classic problems of synchronization - Critical regions - Monitors-Dead locks - Deadlock characterization - Prevention - Avoidance - Detection - Recovery.

UNIT 4 MEMORY MANAGEMENT**9Hrs.**

Storage Management Strategies - Contiguous Vs. Non-Contiguous Storage Allocation - Fixed & Variable Partition Multiprogramming - Paging - Segmentation - Paging/Segmentation Systems - Page Replacement Strategies - Demand & Anticipatory Paging - File Concepts - Access Methods - Directory Structure - File Sharing - Protection - File - System Structure - Implementation.

UNIT 5 I/O SYSTEM, LINUX & SHELL PROGRAMMING**9Hrs.**

Mass Storage Structure - Disk Structure- Disk Scheduling - Disk Management - Swap Space Management - RAID Structure - Shell Operation Commands - File Management Operation - Internet Service - Telnet - FTP - Filters & Regular Expressions- Embedded Linux - Android Vs iOS - Unix Internals - Shell Programming - Variable, Arithmetic Operations, Control Structures, Handling Date, Time & System Information.

Max.45Hours**COURSE OUTCOMES:**

On completion of the course, student will be able to-

- CO1: Understand the fundamental components of a computer operating system and how computing resources are managed by the operating system.
- CO2: Demonstrate and understand the different memory and I/O management techniques used in Operating Systems.
- CO3: Apply the concepts of CPU scheduling, synchronization and deadlocks in real computing problems.
- CO4: Have practical experience with software tools available in modern operating systems such as semaphores and monitors for process synchronization
- CO5: Create design and construct the following OS components: System calls, Schedulers, Memory management systems, Virtual Memory and Paging systems in the modern operating system
- CO6: Understand file system structure and implement a file system such as FAT.

END SEMESTER EXAM QUESTION PAPER PATTERN

Max. marks:100

Exam Duration:3 Hrs.

Part A: 10 question of 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SITA1502	CUSTOMER INTERFACE DESIGN AND DEVELOPMENT	L	T	P	Credits	Total Marks
		3	*	0	3	100

COURSE OBJECTIVES

- To effectively design with a range of technologies.
- To develop static websites & dynamic web applications.
- To learn new emerging web technologies.
- To gain knowledge and skills required for web development careers.
- To develop skills in the use and application of specific methods in user experience design.

UNIT 1 HTML, XML, CSS & RWD**9 Hrs.**

Introduction To HTML- DHTML, XML - Structuring XML document using DTD - Schemas - XML parsers - DOM - SAX presentation technologies - XSL - XFORMS - XHTML - Transformations - XSLT - XLINK - XPATH - XQuery. Responsive Web Design-Intro-Fluid Grid-Viewport-Media Queries-Images.
Introduction To CSS-Syntax, Selectors-Types of style sheets.

UNIT 2 CLIENT SIDE SCRIPTING**9Hrs.**

Java Script - Advantages - Data types - Variables - Operators - Control statements - Functions - Objects and arrays - Windows and frames - Forms. AJAX - XMLHttpRequest (XHR) - Create Object - Request - Response - Ready state.

UNIT 3 SERVER SIDE SCRIPTING**9 Hrs.**

Introduction To PHP - Data Types - Control Structures - Arrays - Function - Html Form with PHP -Form Handling & Validation - File Handling - Cookies - Sessions - Filters - Exception Handling - Database Connectivity With MySQL.

UNIT 4 ANGULAR JS & JQUERY**9 Hrs.**

Angular JS Expression - Modules - Directives - Data Binding - Controllers - Scopes - Filters - Services - Tables - Events - Form - Validation.
jQuery Syntax - Selects - Events - jQuery Effects - jQuery - jQuery HTML - jQuery Traversing

UNIT 5 UX & UI**9 Hrs.**

UX Introduction -Elements of UX Design- UX Design Process- Research Methods and Tools-Understanding User Needs and Goals. UX Design Process: Visual Design Principles-Information Design and Visualization-Interaction Design-Prototyping Tools-Usability Test. UI Introduction-User Interface Components -Tools and Processes.

Max.45Hours**COURSE OUTCOMES:**

On completion of the course the student will be able to

- C01: Able to work with XML technologies.
- C02: Design web page to perform form validation using client-side scripting language.
- C03: Implement new technologies such as Angular JS & jQuery.
- C04: Develop web applications using server-side scripting language.
- C05: Understand the differences between usability and user experience.
- C06: Effectively select and utilize design thinking processes and UX/UI tools.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100**

Part A: 10 questions carrying 2 marks each - No choice

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

Exam Duration:3 Hrs.

20 marks

80 marks

SCSA1402	COMPUTER ARCHITECTURE & ORGANIZATION	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To impart knowledge on various types of Registers and Microinstructions.
- To discuss about the Data path design and Processor design in detail.
- To understand the types of memory organizations.
- To discuss about the registers, interface and communication in I/O devices.
- To analyze about the characteristics, structure, communication and synchronization of multiprocessors.

UNIT 1 CENTRAL PROCESSING UNIT**9 Hrs.**

Introduction - General Register Organization - Stack organization - Basic computer Organization - Instruction codes - Computer Registers - Computer Instructions - Instruction Cycle - Arithmetic - Logic - Shift Micro operations - Arithmetic Logic Shift unit - Example Architectures: MIPS - Power - PC - RISC - CISC

UNIT 2 COMPUTER ARITHMETIC**9 Hrs.**

Addition - Subtraction - Multiplication and Division algorithms - Floating Point Arithmetic operations Micro programmed Control - Control memory - address sequencing - Micro program Example - Design of Control unit - Example Processor design

UNIT 3 MEMORY ORGANIZATION**9 Hrs.**

Memory Hierarchy - Main memory - auxiliary Memory - Associative Memory - Cache Memory - Virtual memory

UNIT 4 INPUT - OUTPUT ORGANIZATION**9 Hrs.**

Peripheral Devices - I/O Interface - Modes of transfer - Priority Interrupt - DMA - IOP - Serial Communication

UNIT 5 CHARACTERISTICS OF MULTIPROCESSORS**9 Hrs.**

Interconnection Structures - Interprocessor Arbitration - Interprocessor Communication and Synchronization - Cache coherence

MAX. 45 Hours**COURSE OUTCOMES**

On completion of the course the student will be able to

- CO1: Classify the various types of registers, microinstructions and addressing modes.
 CO2: Design the data path for processor
 CO3: Demonstrate the usage of Memory Organization.
 CO4: Describe about the I/O devices.
 CO5: Explain the characteristics, structure, communication and synchronization of multiprocessor.
 CO6: State the inter processor communication and synchronization.

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

Exam Duration: 3 Hrs.

20 marks

80 marks

SCSA1503	COMPUTER GRAPHICS & MULTIMEDIA APPLICATIONS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To introduce Two and Three dimensional graphical structure.
- To design 2D and 3D methods and Models
- To explore the visible surface detection with illumination and color models.
- To understand the concepts involved in multimedia and basis tools.
- To gain knowledge on Multimedia compression and animations.

UNIT 1 BASICS OF COMPUTER GRAPHICS**9 Hrs.**

Output primitives- Survey of Computer Graphics-Overview of Graphics System- Line drawing Algorithm (DDA Line Drawing Algorithm, Bresenham's Line Drawing Algorithm)-Circle drawing Algorithm- Curve Drawing Algorithm- Attributes of output Primitives- Antialiasing.

UNIT 2 2D TRANSFORMATION AND VIEWING**9 Hrs.**

2D Transformation and other transformation - 2D and 3D Viewing- Line Clipping(Cohen Sutherland)- Polygon Clipping (Sutherland Hodgeman) - Logical Classification Input Function.

UNIT 3 3D CONCEPTS AND CURVES**9 Hrs.**

3D Object: Representation Method- B-Rep- Sweep Representation- 3D Transformation - curve generation - Splines - Beziers - Blending of curves other interpolation techniques- Display Curves and Surface - Shape Description Requirements - Parametric function - 3D Concept Introduction - Fractals and Self Similarity - Successive refinement of Curves - Koch Curves and Peano Curves.

UNIT 4 METHODS AND MODELS**9 Hrs.**

Visual Surface detection methods - Illumination models - Halftone Patterns - Dithering Techniques - Polygon Rendering Methods - Ray Tracing Methods - Color methods - Color Applications.

UNIT 5 MULTIMEDIA BASIS AND TOOLS**9 Hrs.**

Multimedia Basics and Tools - Introduction to Multimedia - Compression and Decompression - Data and File Format Standards - Digital voice and audio video image animation- Introduction to photoshop- workshop tools- Navigating window - Importing and Exporting Images - Operations on Images - resize, Crop, rotate.

Introduction to Flash - Elements of Flash Documents - Flash Environment- Drawing Tools - Flash Animation Importing and Exporting - Adding Sounds - Publishing Flash Movies .

Max.45Hours**COURSE OUTCOMES :**

On completion of the course the student will be able to:

- CO1: Identify the various line & circle drawing algorithm.
- CO2: Study the various transformations in 2D and 3D objects.
- CO3: Understand the concepts of curves and surface.
- CO4: Apply transformation and clipping algorithm in 2D and 3D objects.
- CO5: Design Illumination and color models.
- CO6: Implement 2D and 3D Transformation concepts in Real world Applications

80 marks

SITA2501	CUSTOMER INTERFACE DESIGN AND DEVELOPMENT LAB	L	T	P	Credits	Total Marks
		0	0	4	2	100

COURSE OBJECTIVES

- To be familiar with mark-up languages and style sheets
- To learn XML technologies and AJAX
- To develop static websites and dynamic web applications
- To gain knowledge and skills required for web development careers.
- To create web page using PHP.

LIST OF EXPERIMENTS:

1. Design a web page for your university using HTML
2. Create an Internal and External Style sheet.
3. Working with XML and CSS
4. Write a JavaScript code to perform form validation.
5. Working with AJAX
6. Working with Angular JS Directives
7. Working with Angular JS Expressions
8. Working with jQuery Selectors
9. Working with jQuery Events & Effects
10. Program to perform PHP Form Validation
11. Program to demonstrate PHP Form Handling
12. Program to create PHP Database Application using MySQL

COURSE OUTCOMES :

On completion of the course the student will be able to

- CO1: Implement static web pages using mark-up languages and style sheets
 CO2: Implement form validation using client-side scripting language
 CO3: Implementation of new technologies: Angular JS & jQuery
 CO4: Develop web applications using server-side scripting language
 CO5: Develop web applications with database connectivity.
 CO6: Create web page using PHP concepts

SCSA2502	OPERATING SYSTEMS LAB	L	T	P	Credits	Total Marks
		0	0	4	2	100

COURSE OBJECTIVES

- To write programs in Linux environment using system calls.
- To implement the scheduling algorithms.
- To implement page replacement algorithms
- To implement file allocation methods.
- To develop solutions for synchronization problems using semaphores.

LIST OF PROGRAMS:

1. Study of basic LINUX & vi Editor command
2. String and Numerical Handling Functions
3. Loop and Selection Constructs
4. File Handling Functions
5. Manipulate Date/Time/Calendar
6. Retrieve System information
7. Implementation of process scheduling mechanism - FCFS, SJF, Priority Queue
8. Producer Consumer Problem using Semaphores
9. Reader - Writer Problem
10. Diner's Philosopher Problem
11. First Fit, Worst Fit, Best Fit allocation strategy
12. Bankers Algorithm
13. Simulate Paging Technique of Memory Management
14. Simulate Page Replacement Algorithms
15. Implement memory management Scheme

COURSE OUTCOMES:

On completion of the course, student will be able to-

- C01: Learn the basic services and functionalities of the operating system using System Calls in Linux.
 C02: Model CPU Scheduling such as FCFS, SJF, Priority and Round Robin
 C03: Describe and solve Synchronization Problem
 C04: Simulate Memory Management Technique
 C05: Explain how to perform Paging Techniques
 C06: Demonstrate Page Replacement Algorithms

4. Linux Fundamentals, Paul Cobbaut, 2015

SCSA1601	MACHINE LEARNING	L	T	P	Credits	Total Marks
		3	*	0	3	100

COURSE OBJECTIVES

- To focus on the construction and study of algorithms that can learn from data.
- To emphasize on the logical, knowledge-based approach.
- To introduce students to the basic concepts and techniques of Machine Learning.
- To develop skills of using recent machine learning software for solving practical problems.
- To gain experience of doing independent study and research.

UNIT 1 INTRODUCTION TO MACHINE LEARNING**9Hrs**

Machine learning - examples of machine learning applications - Learning associations - Classification -Regression - Unsupervised learning - Supervised Learning - Learning class from examples - PAC learning -Noise,model selection and generalization - Dimension of supervised machine learning algorithm.

UNIT2-DECISION THEORY**9Hrs**

Bayesian Decision Theory- Introduction- Classification - Discriminant function-Bayesian networks-Association rule - Parametric Methods - Introduction - Estimation -Multivariate methods-Data Parameter estimation-Dimensionality Reduction- PCA-Linear discriminant analysis.

UNIT3 CLUSTERING®RESSION**9Hrs.**

Clustering - Mixture densities - k-means clustering - Supervised Learning after clustering - Hierarchical clustering - Nonparametric Methods - Density estimation - Generalization of multivariate data - Smoothing models -Decision Trees - Univariate trees - Multivariate trees - Learning rules from data - Linear Discrimination-Gradient Descent

UNIT 4 MULTILAYER PERCEPTRONS**9Hrs**

Structure of brain - Neural networks as a parallel processing - Perceptron - Multilayer perceptron - Back propagation - Training procedures - Tuning the network size - Learning time.

UNIT 5 LOCAL MODELS**9Hrs**

Competitive learning - Adaptive resonance theory - Self organizing map -Radial Basis functions - Bagging- Boosting-Reinforcement Learning.

Max.45Hours**COURSE OUTCOMES:**

After completing the study of the discipline "Machine Learning", the student are expected to:

- CO1: understand complexity of Machine Learning algorithms and their limitations;
- CO2: understand modern notions in data analysis oriented computing;
- CO3: be capable of confidently applying common Machine Learning algorithms in practice and implementing their own;
- CO4: be capable of performing distributed computations;
- CO5: can demonstrate working knowledge of reasoning in the presence of incomplete and/or uncertain information
- CO6: gain ability to apply knowledge representation, reasoning, and machine learning techniques to real-world problems

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration: 3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA1603	BIG DATA ANALYTICS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To become familiar with the fundamental concepts of Big Data
- To be competent in identifying the challenges in handling large volumes of data.
- To propose scalable solutions
- To understand the impact of Big Data in business intelligence, scientific discovery, and in day-to-day life.
- To learn the tools and techniques for handling large datasets.

UNIT 1 Introduction**9Hrs.**

Introduction to Big Data - Issues and Challenges in the traditional systems - Evolution of Big Data - Four V's of Big Data - Big Data Use Cases and characteristics - Intelligent Data Analysis - Data Analytic Tools - Big Data Storage Statistical Concepts: Sampling Distributions - Re-Sampling - Statistical Inference - Prediction Error - Random Sampling

UNIT 2 Big Data Tools I**9 Hrs.**

Big Data Applications using Pig and Hive - Fundamentals of HBase and ZooKeeper - IBM InfoSphere Big Insights - Introduction to FLUME - KAFKA

UNIT 3 Big Data Tools II**9Hrs.**

Introduction to NoSQL - MongoDB - Spark - Cassandra - Cassandra Data Model - Data Design - Cassandra Architecture - Read and Write Data - Clients - Integrate with Hadoop

Introduction - Importance of Effective Data Visualization - Introduction to Tableau - Choosing the Right Chart Type - Using the Color Effectively Reducing Clutter - Dashboard Creation and Formatting

UNIT 4 Hadoop**9 Hrs.**

Introduction to Hadoop - Hadoop Distributed File System - Analysing data with Hadoop - Scaling - Streaming - Clustering: Single Node and Multi Node - Working with Hadoop Commands - Working with Apache Oozie

UNIT 5 Map Reduce**9Hrs.**

Algorithms using map reduce - Matrix-Vector - Multiplication - Word Count - Understanding inputs and outputs of MapReduce, Data Serialization - Introduction to YARN - MapReduce Vs YARN - YARN Architecture - Scheduling in YARN - Fair Scheduler - Capacity Scheduler.

MAX. 45 Hours.**COURSE OUTCOMES:**

On completion of the course the student will be able

- CO1: Configure the tools required for setting up Big Data Ecosystem
- CO2: Understand conceptually how Big Data is stored and organized
- CO3: Use appropriate models of analysis, assess the quality of input, derive insight from results, and investigate potential issues
- CO4: Interpret data findings effectively in visual formats
- CO5: Explore the fundamentals of various big data applications
- CO6: Implement the Algorithms for data analytics

80 marks

SITA1601	MOBILE APPLICATION DEVELOPMENT	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand basic concepts of mobile technologies, different operating systems and how to work with Android.
- To develop applications for current and emerging mobile computing devices, performing tasks at all stages of the software development life-cycle.
- To learn how to code with objective C programming.
- To design, implement and deploy mobile applications for iOS.
- To design, implement and deploy mobile applications for windows OS.

UNIT1 INTRODUCTION TO ANDROID

9 Hrs.

Introduction to mobile technologies, mobile operation systems - pros and cons, Introduction to Android, Features, Architecture, UI Widgets and Events handling, Layouts, Application structure, Android Manifest file, Creating Android applications.

UNIT2 BUILDING BLOCKS AND DATABASE

9Hrs.

Introduction to Activities and Intents - Understanding Activity life cycle, Linking Activities, Passing Data, Toast, Displaying a Dialog Window and Notifications. Content Provider, Services, Broadcast receivers, accessing databases, Location and sensors, Multimedia audio, video and camera, Deploying and publishing application.

UNIT3 OBJECTIVE C PROGRAMMING

9 Hrs.

Objective C - Objects and Classes, Property, Messaging, Categories and Extensions, Fast Enumeration - NSArray, NSDictionary, Methods and Selectors, Static & Dynamic objects, Exception handling, Memory management, Swift language essentials: Arrays, Dictionaries, functions.

UNIT4 INTRODUCTION TO IOS

9Hrs.

Introduction to iPhone, MVC Architecture, View Controller - Building the UI and Event handling, Application life cycle, Tab Bars, Story Boards and Navigation Controllers, Table View, Push Notification, Database handling, Introduction to icloud, Webkit framework in iOS8, Deploying and publishing application.

UNIT 5 WINDOWS MOBILE APP DEVELOPMENT

9 Hrs.

Introduction to Windows Phone 8, Application Life cycle, UI Designing and events, Building, Files and Storage, Network Communication, Push Notification, Background Agents, Maps and Locations, Data Access and storage, Introduction to silverlight and XAML, Data Binding, Deploying and Publishing.

MAX. 45 Hours.

COURSE OUTCOMES:

On completion of the course, student will be able to

- CO1: Understand the technologies and business trends impacting mobile applications.
- CO2: Understand and remember the components of android, iOS and Windows mobile applications.
- CO3: Learn the programming languages and techniques for developing mobile applications.
- CO4: Develop mobile applications with compelling user interface and database connectivity for real time applications for iOS.
- CO5: Deploy mobile applications with compelling user interface and database connectivity for real time applications for Windows OS.
- CO6: Develop and deploy mobile applications using silverlight.

80 marks

SITA2601	MOBILE APPLICATION DEVELOPMENT LAB	L	T	P	Credits	Total Marks
		0	0	4	2	100

COURSE OBJECTIVES

- To develop applications for current and emerging mobile computing devices, performing tasks at all stages of the software development life-cycle.
- To learn how to utilize rapid prototyping techniques to design and develop sophisticated mobile interfaces.
- To understand the programming languages and platform for developing mobile applications.
- To design, implement and deploy mobile applications using an appropriate software development environment.
- To upload the developed application into the Android play store.

LIST OF EXPERIMENTS:

1. To implement mobile application life cycle methods.
2. To implement simple calculator application.
3. To implement simple SMS application.
4. To implement authentication verification application without and with database.
5. To implement navigation application with multiple pages / activities.
6. To implement student placement registration form with database.
7. To implement a simple notification application.
8. To implement simple intent with data passing application.
9. To implement simple profile changer application through SMS.
10. To create mobile web browser application.
11. To create mobile e-mail application to send a mail.
12. To add Google maps to an Android application.
13. To create photo show application
14. To create app to upload a document
15. Mini project

NOTE:

1. Above applications have to be created and deployed in Android OS.
2. Environment Required: Android SDK / Android Studio.

COURSE OUTCOMES:

On completion of the lab, student will be able to

- C01: Understand how to set up Android Development Environment.
 C02: Design various Android UI components.
 C03: Develop Android applications using Java.
 C04: Develop Android applications by using Eclipse with ADT / Android Studio.
 C05: Create real time applications using Android database connectivity.
 C06: Deploy the Android App into play store.

SITA2602	BIG DATA ANALYTICS LAB	L	T	P	Credits	Total Marks
		0	0	4	2	100

COURSE OBJECTIVES

- To configure Big Data Ecosystem
- To work with No SQL Databases
- To process job scheduling
- To Analyse and Interpret Data
- To visualize the data insights

To learn, deploy and execute programs on the following technologies.

1. No SQL (using Cassandra/MongoDB/Spark)
2. Hadoop - Map Reduce Programs / Commands / Job Scheduling
3. HDFS
4. YARN
5. Working with Pig and Hive
6. Visualization (using Tableau Cloud)

COURSE OUTCOMES:

- CO1: Able to setup Hadoop in a Cloud / Cluster environment
 CO2: Process and schedule the tasks in the Hadoop platform
 CO3: To configure nosql databases in the big data ecosystem
 CO4: Selection of right visualization method based on the intended audience
 CO5: Creates a dashboard and story based on the data analysis
 CO6: Test and evaluate the data models

SECA3009	DIGITAL IMAGE PROCESSING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES:

- To understand and gain complete knowledge about the fundamentals of digital image processing
- To develop a theoretical foundation of image processing techniques
- To provide analytic skills to process the images

UNIT 1 INTRODUCTION**9 Hrs**

Image Representation, Components of Digital Image Processing Systems, Image Sensing and Acquisition, Elements of Visual Perception, Image formation model, Image Sampling and Quantization, Relationship between pixels.

UNIT 2 IMAGE ENHANCEMENT**9 Hrs**

Enhancement by Point Processing, Histogram Processing, Arithmetic/Logic Operations, Image Averaging, Spatial Filters for Smoothing and Sharpening, Frequency domain filters for Smoothing and Sharpening; Image Degradation & Restoration Model, Noise Models, Inverse Filtering, Geometric Mean Filter.

UNIT 3 IMAGE SEGMENTATION &**9 Hrs**

Detection of Discontinuities, Edge Linking and boundary Detection, Thresholding, Region based Segmentation, Coding Redundancy, Inter pixel Redundancy, Image Compression model, Error Free Compression, Variable Length Coding, Lossy Compression.

UNIT 4 MORPHOLOGICAL & COLOUR IMAGE PROCESSING**9 Hrs**

Dilation and Erosion, Opening and Closing, Basic Morphological Algorithms: Boundary Extraction, Region Filling, Thickening and Thinning; Colour Image Representation, Colour Models, Pseudo Colour Image Processing, Colour Transformations, Smoothing and Sharpening, Segmentation based on Colour.

UNIT 5 MEDICAL IMAGE PROCESSING**9 Hrs**

Noise Reduction in Nuclear Medicine Imaging, Contrast enhancement of mammograms, Detection of Spinal Canal, Detection of calcifications by multi-tolerance region growing, Shape analysis of calcifications, Analysis of Ligament Healing.

Max. 45 Hours**COURSE OUTCOMES:**

At the end of the course student will be able to

- CO1. Understand the fundamentals of Digital Image Processing.
 CO2. Learn the image enhancement techniques in Spatial and Frequency Domain
 CO3. Model the Noises, Restoration and Compression.
 CO4. Analyze segmentation and compression techniques.
 CO5. Apply various algorithms for Colour Image Processing.
 CO6. Apply various algorithms for Medical Image Processing.

80 marks

SCSA1702	ARTIFICIAL INTELLIGENCE	L	T	P	Credits	Total Marks
		3	*	0	3	100

COURSE OBJECTIVES

- To understand the various characteristics of intelligent agents
- To learn the different search strategies in AI.
- To understand the knowledge in solving AI problems.
- To learn the concepts of learning and communication in AI.
- To know about the various applications of AI.

UNIT I INTRODUCTION AND PROBLEM SOLVING**9Hrs**

Introduction - Foundations of AI - History of AI - Intelligent agent - Types of agents - Structure - Problem solving agents - Uninformed search strategies - Breadth first search - Uniform cost search - Depth first search - Depth limited search - Bidirectional search - Searching with partial Information.

UNIT II INFORMED SEARCH AND GAME PLAYING**9Hrs**

Informed search - Strategies - A* Heuristic function - Hill Climbing - Simulated Annealing - Constraint Specification problem - Local Search in continuous space - Genetic algorithm - Optimal decisions in games - Pruning - Imperfect decisions - Alpha-Beta pruning - Games that include an element of chance.

UNIT III KNOWLEDGE AND REASONING**9Hrs**

Knowledge based agent - The Wumpus world environment - Propositional logic - Inference rules - First-order logic - Syntax and semantics - Situation calculus - Building a knowledge base - Electronic circuit domain - Ontological Engineering - Forward and backward chaining - Resolution - Truth maintenance system - Mental Events and Mental Objects.

UNIT IV ACTING LOGICALLY**9Hrs**

Planning - Representation of planning - Partial order planning - Planning and acting in real world - Acting under uncertainty - Bayes's rules - Semantics of Belief networks - Inference in Belief networks - Making simple decisions - Making complex decisions.

UNIT V APPLICATIONS**9Hrs**

AI applications - Language Models - Information Retrieval - Information Extraction - Natural Language Processing - Machine Translation - Speech Recognition - Robot - Hardware - Perception - Planning - Moving.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course the student will be able to

- CO1: An ability to identify, analyze the search algorithm for the AI problems.
- CO2: Represent a problem using first order logic.
- CO3: Provide the knowledge based agent to solve the problem.
- CO4: Understand the Informed search strategies.
- CO5: Apply the bayes's rule to solve the problem for societal concern.
- CO6: Design user centric applications that use AI concepts

COURSE OBJECTIVES

- To implement various machine learning algorithms.
- To learn how to build Artificial Neural Network.
- To understand how to learn Data sets with the help of machine learning algorithms.
- To Apply EM algorithm to cluster a set of data stored in a .CSV file.
- To be familiar with PROLOG tool.

LIST OF PROGRAMS

1. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
2. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
4. Build an Artificial Neural Network by implementing the Back propagation algorithm and test the same using appropriate data sets.
5. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
6. Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set
7. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.
8. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.
9. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.
10. Study of PROLOG. Write the following programs using PROLOG
11. Write a program to solve 8 queens problem
12. Solve any problem using depth first search.
13. Solve any problem using best first search.
14. Solve 8-puzzle problem using best first search.
15. Solve travelling salesman problem

COURSE OUTCOMES

After studying this course, the students will be able to

- CO1: Apply various machine learning algorithms.
 CO2: Design Java/Python programs for various Learning algorithms.
 CO3: Apply appropriate data sets to the Machine Learning algorithms.
 CO4: Identify and apply Machine Learning algorithms to solve real world problems.
 CO5: Apply EM algorithm to cluster a set of data stored in a .CSV file.
 CO6: Implement programs with PROLOG.

SITA3001	PERVASIVE COMPUTING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To make student to understand the challenges for low-resourced computing and the schemes to overcome these.
- To study about creating a ubiquitous environment.
- To learn WAP and voice technology.
- To learn PDA operating systems.
- To learn about device connectivity in ubiquitous environment.

UNIT1 INTRODUCTION**9Hrs.**

Pervasive Computing - Principles, Characteristics - Application examples: Retail, Airline check-in and booking, Healthcare. Interaction Transparency, context aware automated experience capture. Pervasive devices - embedded controls - smart sensors and actuators.

UNIT2 PROTOCOLS**9 Hrs.**

Open protocols - Service discovery technologies - SDP, Jini, SLP, UpnP protocols - data synchronization - SyncML framework - Context communication and access services - Context aware mobile services - Context aware sensor networks, addressing and communications - Context aware security - Device Management.

UNIT 3 DEVICE CONNECTIVITY & TECHNOLOGIES**9 Hrs.**

Past, Present and Future - Device Technology - Device Connectivity - Web Application Concepts- WWW architecture - Protocols - Transcoding - Client Authentication via Internet. Java for Pervasive devices.

UNIT4 WAP & VOICE TECHNOLOGY**9Hrs.**

WAP and Beyond - Voice Technologies - Personal Digital Assistants, WAP infrastructure - WAP security issues - WML - WAP push - Products - i-Mode - Voice Technology: Basics of Speech recognition- Voice Standards - Speech applications - Speech and Pervasive Computing.

UNIT 5 PDA & APPLICATION IN PERVASIVE COMPUTING**9 Hrs.**

PDA operation Systems - Device Characteristics - Software Components - Standards - Mobile Applications - PDA Browsers - Pervasive Web Application architecture, Pervasive application architecture. Applications- Smart Card, Heating Ventilation and Air Conditioning, Set Top Boxes, Appliances and Home Networking, Residential Gateway, Automotive Computing, On Board Computing Systems, In Vehicle networks, Entertainment Systems.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course, student will be able to

CO1: Apply the pervasive computing concepts in real time applications.

CO2: Explore the protocols of Pervasive Computing Environments.

CO3: Analyse the device connectivity and the technologies used in pervasive computing.

CO4: Implement WAP and voice technology.

CO5: Design applications in PDA.

CO6: Create applications in ubiquitous environment.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration:3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SITA3002	REAL TIME OPERATING SYSTEMS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To gain in depth knowledge in fundamentals of Real Time Operating systems and to study the various various performance measures.
- To discuss embedded software and task scheduling and introduce system design techniques and networks.
- To describe system design techniques and networks.
- To learn Task Communication and how to choose a RTOS
- To understand real time operating system with case studies

UNIT1 INTRODUCTION TO REAL TIME SYSTEMS**9Hrs.**

Structure of real time system, Need for RTOS, Task Classes, Performance measures for real time systems- Properties, traditional performance measures, performability, cost functions and hard deadlines, and Estimating program run times, Introduction LINUX/ UNIX OS.

UNIT2 EMBEDDED SOFTWARE AND TASK SCHEDULING**9Hrs.**

Example of embedded system, characteristics and their typical hardware components, embedded software architectures, Scheduling algorithms: round robin, round robin with interrupts, function queue scheduling, real time operating system selection, CPU scheduling algorithms: Rate monotonic, EDF, MLF. Priority Scheduling, Priority Ceiling and Priority inheritance, Real time operating system: Tasks and task states, shared data and re entrancy semaphores and shared data, use of semaphores, Protecting shared data.

UNIT3 SYSTEM DESIGN TECHNIQUES AND NETWORKS**9 Hrs.**

Design methodologies- Design flows - Requirement Analysis - Specifications-System analysis and architecture design - Quality Assurance techniques- Distributed embedded systems - MPSoCs and shared memory multiprocessors.

UNIT4 TASK COMMUNICATION**9 Hrs.**

Shared Memory, Message Passing, Remote Procedure Call and Sockets, Task Synchronization: Task Communication/Synchronization Issues, Task Synchronization Techniques, Device Drivers, How to Choose a RTOS.

UNIT 5 APPLICATIONS OF REAL TIME OS**9 Hrs.**

Comparison and study of RTOS: Vxworks and μ COS - Case studies: RTOS for Image Processing - Embedded RTOS for voice over IP - RTOS for fault Tolerant Applications - RTOS for Control Systems.

Max. 45 Hours

COURSE OUTCOMES :On completion of the course, student will be able to

CO1:Design the fundamental requirements of real time operating system.

CO2:Implement all kind of scheduling algorithm.

CO3:Analyze and design requirement analysis, quality assurance techniques etc.

CO4:Design all kinds of task communication.

CO5:Describe the applications of real time OS.

CO6:Recognize real time OS and its application.

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA3001	DATA MINING AND DATA WAREHOUSING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- Identify the scope and necessity of Data Mining & Warehousing for the society.
- Describe various Data Models and Methodologies in Data Warehousing.
- To understand various Tools and techniques in Data Mining.
- To learn how to analyze the data, identify the problems and choose the relevant algorithms.
- To assess the Pros and Cons of various algorithms and analyze their behavior on real datasets.

UNIT 1 DATA MINING**9 Hrs.**

Introduction - Steps in KDD - System Architecture - Types of data -Data mining functionalities - Classification of data mining systems - Integration of a data mining system with a data warehouse - Issues - Data Preprocessing - Data Mining Application

UNIT2 DATA WAREHOUSING**9 Hrs.**

Data warehousing components - Building a data warehouse - Multi Dimensional Data Model - OLAP Operation in the Multi-Dimensional Model - Three Tier Data Warehouse Architecture - Schemas for Multi-dimensional data Model - Online Analytical Processing (OLAP) - OLAP Vs OLTP Integrated OLAM and OLAP Architecture

UNIT3 ASSOCIATION RULE MINING**9 Hrs.**

Mining frequent patterns - Associations and correlations - Mining methods - Finding Frequent itemset using Candidate Generation - Generating Association Rules from Frequent Itemsets - Mining Frequent itemset without Candidate Generation - Mining various kinds of association rules - Mining Multi-Level Association Rule-Mining MultiDimensional Association Rule-Mining Correlation analysis - Constraint based association mining.

UNIT4 CLASSIFICATION AND PREDICTION**9 Hrs.**

Classification and prediction - Issues Regarding Classification and Prediction - Classification by Decision Tree Induction - Bayesian classification - Baye's Theorem - Naïve Bayesian Classification - Bayesian Belief Network - Rule based classification - Classification by Backpropagation - Support vector machines - Prediction - Linear Regression

UNIT5 CLUSTERING, APPLICATIONS AND TRENDS IN DATA MINING**9 Hrs.**

Cluster analysis - Types of data in Cluster Analysis - Categorization of major clustering methods -Partitioning methods - Hierarchical methods - Density-based methods - Grid-based methods - Model based clustering methods -Constraint Based cluster analysis - Outlier analysis - Social Impacts of Data Mining- Case Studies: Mining WWW- Mining Text Database- Mining Spatial Databases

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course the student will be able to

CO1: Assess Raw Input Data and process it to provide suitable input for a range of data sets.

CO2: Design and Model a Data Warehouse.

CO3: Discover interesting patterns from large amount of data.

CO4: Design and Deploy appropriate Classification Techniques.

CO5: To cluster high dimensional Data.

CO6: Apply suitable data mining techniques for various real time applications.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration: 3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SITA3003	ADVANCED JAVA PROGRAMMING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To know about Enterprise architecture models.
- To introduce the basics of session tracking.
- To understand JSP and to write Custom Tags.
- To know about the development of Enterprise Java Beans.
- To have knowledge in advanced Java programming concepts.

UNIT 1 INTRODUCTION & DATABASE PROGRAMMING**9 hrs.**

J2EE Platform - Enterprise architecture styles - J2EE run times - J2EE API - J2EE architecture - Containers - Introduction to J2EE technologies - Naming and directory services. Database programming with JDBC - JDBC/ODBC bridge - Establishing a connection - Creating and executing SQL statements - Querying - Report statements - Scrollable and updatable result sets - Java.sql packages - JDBC data sources - Connection pooling.

UNIT 2 SERVLET PROGRAMMING**9 hrs.**

Introduction to Servlet Programming - Servlet Implementations - Servlet configuration - Servlet exceptions - Servlet Life Cycle - Servlet Programming - Servlet Security- Servlet communication - Advanced Servlets : Approach to Session Tracking - Demonstrating Session - Lifecycle with Cookies - A simple shopping cart using Sessions - Servlet Context Interface - Servlet Collaboration

UNIT 3 JSP & JAVA MAIL**9 hrs.**

Java Server Pages : Intro to JSP - JSP Directives - Scripting elements - Standard Auctions - Implicit objects - Scope - JSP pages as XML documents - JSP Sample Program - Design Strategies - JSP tag Extensions-A simple TAG - Writing TAG Extensions. Java Mail API: Introduction to Java Mail - Mail Protocols- Java Mail Overview- Quick, Send me a Email: An example program

UNIT 4 ENTERPRISE JAVA BEANS**9 hrs.**

Overview of EJB-EJB Middleware Architecture - EJB Architecture- EJB Containers and its services - Design of EJB Tier - Session java Beans- Stateless and Stateful Beans, Entity Beans and Persistence - Container Vs Bean Managed Persistence, Message Driven Bean - Relationships, EJB Container Services.

UNIT 5 STRUTS**9 hrs.**

Struts: Development Models-Basic Components of Struts - Struts2 Architecture-Interceptors-Validation- Building simple struts Application.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course the student will be able to

- CO1:**Implement JDBC connectivity.
- CO2:**Implement advanced Servlets.
- CO3:**Implement JSP and Java Mail.
- CO4:**Implement EJB.
- CO5:**Implement Struts.
- CO6:**To develop enterprise java applications thereby meeting the industrial requirements.

80 marks

SCSA3002	QUALITY ENGINEERING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To define quality assurance plans
- To apply quality assurance tools & techniques
- To understand the Clean Room Software Engineering activities
- To implement the tools for quality.
- To learn quality assurance models

UNIT 1 SOFTWARE QUALITY**9Hrs.**

Definition of Software Quality, Quality Planning, Quality system - Quality Control Vs Quality Assurance - Product life cycle – Project life cycle models. The Software Quality Challenge - Software Quality Factors - Components of the Software Quality Assurance System. Pre-Project Software Quality Components - Contract Review - Development and Quality Plans.

UNIT 2 SOFTWARE ENGINEERING ACTIVITIES**9Hrs.**

Estimation, Software requirements gathering, Analysis, Architecture, Design, development, Testing and Maintenance.

UNIT 3 SUPPORTING QUALITY ACTIVITIES**9Hrs.**

Metrics, Reviews - SCM - Software quality assurance and risk management

UNIT 4 SOFTWARE QUALITY ENGINEERING TOOLS AND TECHNIQUES**9Hrs.**

Seven basic Quality tools - Checklist - Pareto diagram - Cause and effect diagram - Run chart - Histogram - Control chart - Scatter diagram - Poka Yoke - Statistical process control - Failure Mode and Effect Analysis - Quality Function deployment - Continuous improvement tools - Case study.

UNIT 5 QUALITY ASSURANCE MODELS**9Hrs.**

Software Quality Standards, ISO 9000 series - CMM, CMMI - P-CMM - Six Sigma - Malcolm Baldrige Quality - Case study.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course, student will be able to

CO1: Learn software quality factors

CO2: Apply common software testing strategies

CO3: Demonstrate about the project process control and software Metrics

CO4: Implement all the common software testing strategies.

CO5: Understand the SQA standards and software process assessments

CO6: To deploy quality engineering models in projects

80 marks

SCSA3003	SOFTWARE DEFINED NETWORKS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To learn the fundamentals of software defined networks.
- To understand the separation of the data plane and the control plane.
- To study about the SDN Programming.
- To study about the various applications of SDN
- To learn the SDN Framework

UNIT 1 INTRODUCTION**9Hrs.**

How SDN Works - History and Evolution of Software Defined Networking (SDN): Separation of Control Plane and Data Plane, IETF Forces, Active Networking.

UNIT 2 OPEN FLOW & SDN CONTROLLERS**9Hrs.**

Open Flow Specification - Drawbacks of Open SDN, SDN via APIs, and SDN via Hypervisor-Based Overlays - SDN via Opening up the Device - SDN Controllers - General Concepts.

UNIT 3 DATA CENTERS**9Hrs.**

Multitenant and Virtualized Multitenant Data Center - SDN Solutions for the Data Center Network - VLANs - EVPN - VxLAN - NVGRE. Network Virtualization: Concepts, Applications, Existing Network Virtualization Framework (VMWare and others), and Mininet based examples.

UNIT 4 SDN PROGRAMMING**9Hrs.**

Programming SDNs: Northbound Application Programming Interface, Current Languages and Tools, Composition of SDNs – Network Functions Virtualization (NFV) and Software Defined Networks: Concepts, Implementation and Applications

UNIT 5 SDN**9Hrs.**

Juniper SDN Framework - IETF SDN Framework - Open Daylight Controller - Floodlight Controller - Bandwidth Calendaring - Data Centre Orchestration

Max. 45 Hrs.**COURSE OUTCOMES:**

On completion of the course the student will be able to

- C01:** Analyse the evolution of software defined networks
- C02:** Express the various components of SDN and their uses
- C03:** Explain the use of SDN in the current networking scenario
- C04:** Design and develop various applications of SDN
- C05:** Understand and explain SDN Programming
- C06:** An Ability to understand the SDN Framework

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA3004	ADVANCED COMPUTER ARCHITECTURE	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand the evolution of computer architecture.
- To understand the design challenges in building a system.
- To impart knowledge on various types of Architectures.
- To discuss the performance and synchronization issues in multiprocessors.
- To learn about pipelining concepts and Vector processing.

UNIT 1 BASIC ORGANIZATION AND ARCHITECTURAL TECHNIQUES**9 Hrs.**

RISC processors - Characteristics of RISC processors, RISC vs CISC, Classification of Instruction Set Architectures - Review of performance measurements - Metrics and measures for parallel programs, Speedup performance laws, scalability analysis approaches, Amdahl's law, limitation, Benchmark, SIMD, MIMD Performance.

UNIT 2 INSTRUCTION LEVEL PARALLELISM**9 Hrs.**

Introduction - Parallel Processing - Instruction Level Parallelism and its Exploitation - Concepts and Challenges - Compiler Techniques for Exposing ILP - Limitations on ILP for Realizable Processors - Hardware versus Software Speculation - Multithreading: Using ILP Support to Exploit Thread-Level Parallelism.

UNIT 3 MULTI-CORE ARCHITECTURES**9 Hrs.**

SMT and CMP Architectures - Design Issues - Intel Multi-Core Architecture - SUN CMP Architecture - IBM cell Architecture - HP Architecture - RISC Architecture-Multicore Organization - Intel x86 Multicore Organization

UNIT 4 MULTIPROCESSORS**9 Hrs.**

Symmetric and Distributed Shared Memory Architectures - Cache Coherence Issues - Performance Issues - Synchronization Issues - Models of Memory Consistency - Interconnection Networks - Buses, Crossbar and Multi-stage Switches

UNIT 5 VECTOR PROCESSING & PARALLEL ALGORITHMS**9 Hrs.**

Pipelining - Introduction - Vector Processing - Vector Operations- Vector Architecture - SIMD Extensions for Multimedia - Graphics Processing Units - Introduction to Parallel Algorithms - Models of Computation- Selection - Merging on EREW and CREW.

Max. 45 Hrs.**COURSE OUTCOMES :**

On Completion of course the student will be able to

CO1: Compare RISC and CISC processors and analyze metrics for improving performance of processors.

CO2: Analyze and utilize instruction level parallelism.

CO3: Analyze the design issues of distributed shared memory and explain multiprocessor Architectures.

CO4: Compare SMT and CMT architectures and their performance.

CO5: Describe multi core processors and intel x86 multi core organizations.

CO6: Design and develop Parallel algorithms.

80 marks

SITA3004	USER INTERFACE DESIGN AND IMPLEMENTATION	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To explain hypertext and style sheet languages.
- To apply Responsive Web Design Framework and features.
- To illustrate the basics of JavaScript, jQuery and allied scripting languages for Web design.
- To build Server side JS frameworks
- To design client side JS frameworks

UNIT 1 UI DESIGN**9Hrs.**

HTML5: What is HTML5 - Features of HTML5 - Semantic Tags - New Input Elements and tags - Media tags (audio and video tags) - Designing Graphics using Canvas API - Drag and Drop features - Geolocation API - Web storage (Session and local storage).

CSS3: What is CSS3 - Features of CSS3 - Implementation of border radius, box shadow, image border, custom web font, backgrounds - Advanced text effects (shadow) - 2D and 3D Transformations - Transitions to elements - Animations to text and elements.

UNIT 2 RESPONSIVE WEB DESIGN (RWD)**9 Hrs.**

Responsive Design: What is RWD - Introduction to RWD Techniques - Fluid Layout, Fluid Images and Media queries - Introduction to RWD Framework.

Twitter Bootstrap - Bootstrap Background and Features - Getting Started with Bootstrap - Demystifying Grids - OffCanvas - Bootstrap Components - JS Plugins - Customization.

UNIT 3 INTRODUCTION TO JAVASCRIPT AND JQUERY**9 Hrs.**

Introduction - Core features - Data types and Variables - Operators, Expressions and Statements - Functions & Scope - Objects - Array, Date and Math related Objects - Document Object Model - Event Handling - Browser Object Model - Windows and Documents - Form handling and validations. Object-Oriented Techniques in JavaScript - Classes - Constructors and Prototyping (Sub classes and Super classes) - JSON - Introduction to AJAX. Introduction - jQuery Selectors - jQuery HTML - Animations - Effects - Event Handling - DOM - jQuery DOM Traversing, DOM Manipulation - jQuery AJAX.

UNIT 4 INTRODUCTION TO SERVER-SIDE JS FRAMEWORK – NODE.JS**9 Hrs.**

Introduction - What is Node JS - Architecture - Feature of Node JS - Installation and Setup - Creating web servers with HTTP (Request & Response) - Event Handling - GET & POST implementation - Connect to SQL Database using Node JS – Implementation of CRUD operations.

UNIT 5 INTRODUCTION TO CLIENT-SIDE JS FRAMEWORK**9 Hrs.**

Introduction to Angular 4.0 - Needs & Evolution - Features - Setup and Configuration - Components and Modules - Templates - Change Detection - Directives - Data Binding - Pipes - Nested Components. Template - Model Driven Forms or Reactive Forms - Custom Validators. Introduction to ReactJS - React Components- Build a simple React component- React internals -Component inter communication- Component composition- Component styling.

Max. 45 Hours**COURSE OUTCOMES :**

On Completion of course the student will be able to

- CO1:** Develop web pages and style sheets using HTML and CSS3 respectively.
- CO2:** Design responsive websites with RWD techniques.
- CO3:** Apply JavaScript and allied scripting languages for implementing object models and functions.
- CO4:** Demonstrate Server Side JS Framework for application development.
- CO5:** Use Client Side JS Framework for redefining the application development.
- CO6:** Develop User Interface Designs using the frameworks

80 marks

SITA3005	SOCIAL NETWORK ANALYSIS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand the concept of semantic web and related applications.
- To learn knowledge representation using ontology.
- To understand human behavior in social web and related communities.
- To learn mining in social network communities.
- To learn visualization of social networks.

UNIT 1 INTRODUCTION**9 Hrs.**

Introduction to Semantic Web: Limitations of current Web - Development of Semantic Web - Emergence of the Social Web
 Social Network Analysis: Social Networks Perspective - Analysis of Network Data -Key concepts and measurements in network analysis-Interpretation of Network Data - Social Network Analysis in the Social and Behavioral Sciences - Metrics in social network analysis.

UNIT 2 SOCIAL NETWORK ANALYSIS SOFTWARE, TOOLS AND LIBRARIES**9 Hrs.**

Modelling and aggregating social network data: Ontological representation of social individuals - Ontological representation of social relationships - Aggregating and reasoning with social network data -(Advanced representations) Multi-Relational characterization of dynamic social network communities -Social network analysis software - Tools - Libraries.

UNIT 3 CLIQUES, CLUSTERS AND COMPONENTS**9 Hrs.**

Components and Sub graphs: Sub graphs - Ego Networks, Triads, and Cliques, Hierarchical Clustering, Triads, Network Density and conflict. Density: Egocentric and Sociocentric - Digression on Absolute Density - Community structure and Density, Centrality : Local and Global - Centralization and Graph Centres, Cliques and their intersections, Components and Citation Circles - Positions, Sets and Clusters.

UNIT 4 PREDICTING HUMAN BEHAVIOUR AND PRIVACY ISSUES**9 Hrs.**

Development of Social Network Analysis - Understanding and predicting human behavior for social communities - User data management - policy, legal, and technical challenges. Inference and Distribution - Enabling new human experiences - Reality mining - Context - Awareness - Privacy in online social networks - Trust in online environment - Trust models based on subjective logic - Trust network analysis - Trust transitivity analysis - Combining trust and reputation - Trust derivation based on trust comparisons - Attack spectrum and countermeasures.

UNIT 5 VISUALIZATION AND APPLICATIONS OF SOCIAL NETWORKS**9 Hrs.**

Graph theory - Centrality - Clustering - Node-Edge Diagrams - Matrix representation - Visualizing online social networks, Visualizing social networks with matrix-based representations - Matrix and Node-Link Diagrams - Hybrid representations - Modeling and aggregating social network data -Applications - Cover networks - Community welfare - Collaboration networks - Co-Citation networks.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course the student will be able to

- CO1:**An ability to identify metrics used in network analysis.
- CO2:**An ability to classify the network related data's.
- CO3:**Identify the aim of graph in computational models.
- CO4:**Apply the knowledge in predicting the user behaviors.
- CO5:**Visualization of a social network using tools.

CO6:Ability to analyze metrics in social network analysis.

END SEMESTER EXAM QUESTION PAPER PATTERN

Max. Marks: 100

Exam Duration: 3 Hrs.

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SBIA3010	HEALTH INFORMATICS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES:

- To Introduce the students the problems and challenges that confront the field of health informatics.
- To Introduce the students about the research avenues and salient features in the practice of health informatics
- To Provide the students with the basic skills and knowledge in health informatics to apply in a career related to health care.
- To Lead students in the discussion around ethical and diversity issues in health informatics.
- To Provide additional direction to those interested towards the study in the field.

UNIT 1 INTRODUCTION & OVERVIEW: HEALTH INFORMATION TECHNOLOGY & HEALTH INFORMATICS 9 Hrs.

Define information management, information technology and informatics - Various ways in which HIT has evolved to improve quality or enhance patient safety - Informatics drivers and trends - Standards development organizations: Health Level 7 (HL-7), Healthcare Information Technology Standards Panel (HITSP), and Office of the National Coordinator for Health Information Technology (ONC) Health IT Standards Committee-Health informatics - Needs, objectives and limitations - Medical Terminology for Health Informatics Professionals

UNIT 2 CLINICAL DECISION SUPPORT SYSTEMS (CDSS) AND WORKFLOW**9 Hrs.**

Fundamental requirements of an effective Clinical Decision Support System-principles of health care data exchange and health care data standards relate to patient care, productivity and data analysis- common controlled vocabularies in use today: ICD, CPT, NDC, RxNorm, LOINC and SNOMED CT-advantages and disadvantages (unintended consequences) of Clinical Decision Support Systems (CDSS) in terms of cognitive support

UNIT 3 HEALTHCARE DATABASE MANAGEMENT SYSTEM**9 Hrs.**

Health information systems - design, architecture and interoperability - Electronic health records (EHRs) - Electronic medical record (EMR) with electronic health record (EHR)- emergence of Personal Health Records and their implications for patients, health care providers and Decision Aids and health systems- EHR access agreement

UNIT 4 COMPUTER APPLICATIONS IN HEALTH CARE AND BIOMEDICINE**9 Hrs.**

The language of biomedical informatics: data, information & knowledge; standards and vocabularies - Evidence based practice (EVP) and clinical practice guidelines (CPG) - Evaluation methods for health informatics - Machine learning for extraction of medical knowledge - MATLAB programming for health informatics

UNIT 5 CASE STUDIES AND ETHICAL ISSUES**9 Hrs.**

Modeling, simulation and visualisation in health informatics - Ethical Issues in Health Informatics - Fundamentals of data science in medicine - Genomic and Systems Medicine -Advanced data analysis in medicine - Data driven decision making and evaluation in medicine - Legal Aspects of Health Information Systems - E-Healthcare & Ethics - E-Medicine Business Models - Case Studies in Health Information Management.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course, student will be able to

CO1: Develop knowledge about problems and challenges that health addressed by informatics and apply the knowledge to the research and practice in health informatics.

CO2: Demonstrate basic skills and knowledge in health informatics for application in future health-related careers.

CO3: Demonstrate ability to ask, search for information and answer health-related questions.

CO4: To identify genomic variants associated with a disease phenotype and communicate this association.

CO5: Perform visualization and simple analysis of a data set to assess difficulty of predicting disease (cardiovascular and other) risk in a synthetic patient dataset.

CO6: Apply communication skills through an interview with an informatics professional and development of a written summary and analyse ethical and diversity issues in health informatics.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100**

Part A: 10 questions carrying 2 marks each - No choice

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

Exam Duration: 3 Hrs.

20 marks

80 marks

SITA3006	UNIX INTERNALS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand the design of the UNIX operating system.
- To become familiar with the system architecture.
- To learn the various low-level algorithms used in UNIX.
- To learn process control.
- To learn memory management.

UNIT 1 SYSTEM ARCHITECTURE AND ADMINISTRATION**9 Hrs.**

General review of the system - History - System structure - User perspective - Operating system services - Assumptions about hardware - Introduction to the kernel - Architecture of the UNIX operating system - System administration.

UNIT 2 BUFFER CACHE AND DISK BLOCKS**9 Hrs.**

The buffer cache - Headers - Buffer pool - Buffer retrieval - Reading and writing disk blocks - Advantages and disadvantages of the buffer cache - Internal representation of files - Inodes - Structure of the buffer pool - Directories - Path name to Inode - Super block - Inode assignment - Allocation of disk blocks - Other file types.

UNIT 3 FILE SYSTEMS**9 Hrs.**

System calls for the file system - Open - Read - Write - Lseek - Close - Create - Special files creation - Change directory and change root - Change owner and change mode - Stat - Fstat - Pipes - Dup - Mount - Un-mount - Link - Unlink - File system abstraction - Maintenance.

UNIT 4 PROCESS CONTROL**9 Hrs.**

The system representation of processes - States - Transitions - System memory - Context of a process - Saving the context - Manipulation of a process address space - Sleep process control - signals - Process termination - Awaiting - Invoking other programs - The Shell - system Boot and the INIT process - process scheduling.

UNIT 5 MEMORY MANAGEMENT**9 Hrs.**

Memory management policies - Swapping - Demand paging - A Hybrid System - I/O subsystem - Driver interfaces - Disk drivers - Terminal drivers - Inter Process Communication.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course the student will be able to

- CO1** : Understand the basic functions of UNIX operating systems
- CO2** : Analyze the buffers and kernel representation
- CO3** : Understand the UNIX system structure and system calls.
- CO4** : Demonstrate the UNIX segmentation, scheduling and paging.
- CO5** : Apply the concept of memory management and Inter process communication.
- CO6** : Explore various file systems.

80 marks

SITA3007	COMPUTATIONAL INTELLIGENCE	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

1. To understand the concepts, paradigms, algorithms, and implementation of CI and its constituent methodologies
2. To emphasize on practical applications throughout, that is, how to apply the concepts, paradigms, algorithms implementations, discussed to practical problems in engineering and computer science.
3. To introduce the paradigms, concepts and algorithms in Computational Intelligence.
4. To introduce different kinds of problems addressed by CI techniques and their performance measurement.

UNIT 1 ARTIFICIAL NEURAL NETWORKS**9 Hrs.**

The Artificial Neuron - Supervised Learning Neural Networks-Supervised Learning rules -Unsupervised Learning Neural Networks - Reinforcement Learning -Learning through awards-Model free Reinforcement Learning- Performance Measures-Performance Factors.

UNIT 2 EVOLUTIONARY COMPUTATION**9 Hrs.**

Introduction to Evolutionary Computation - Genetic Algorithms - Genetic Programming - Basic Evolutionary Programming – Generic Evolution Strategy Algorithm -Basic Differential Evolution - Basic Cultural Algorithm-Belief Space - Coevolution-Applications of various evolutionary computation techniques.

UNIT 3 SWARM INTELLIGENCE**9 Hrs.**

Basic Particle Swarm Optimization - Social Network Structures-Basic Variations-Basic PSO Parameters-Ant Colony Optimization - Ant Algorithms-Simple Ant Colony Optimization Algorithm-Ant System - Ant Colony System - Max-Min Ant System- Basic Artificial Bee Colony Algorithm.

UNIT 4 ARTIFICIAL IMMUNE SYSTEMS**9 Hrs.**

Natural Immune System - Learning the Antigen Structure - Artificial Immune System Algorithm-Classical View Models-Clonal Selection Theory Models-Network Theory Models-Artificial Immune Network-Adapted artificial Immune Network.

UNIT 5 FUZZY SYSTEMS**9 Hrs.**

Fuzzy Sets - Fuzzy Logic and Reasoning - Fuzzy Inferencing - Fuzzy Controllers - Mamdani Fuzzy Controller-Takagi-Sugeno Controller -Introduction to Rough sets - Intelligence and Applications: Natural language processing-Morphological Analysis-Syntax analysis-Semantic Analysis.

Max. 45 Hours**COURSE OUTCOMES :**

On completion of the course the student will be able to

- CO1** : Provide a basic exposition to the goals and methods of Computational Intelligence.
- CO2** : Analyze a given system/problem and extract learnable subsystems/problems.
- CO3** : Learn computational intelligence tools.
- CO4** : Study of the design of intelligent computational techniques.
- CO5** : Apply the Intelligent techniques for problem solving.
- CO6** : Improve problem solving skills using the acquired knowledge in the areas of, reasoning, natural language understanding, computer vision, automatic programming and machine learning.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration:3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA1701	CYBER PHYSICAL SYSTEMS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To introduce basics of cyber-physical system and Industrial revolution 4.0 concepts
- To develop an exposition of the challenges in implementing a cyber-physical system
- To analyze the functional behavior of CPS based on standard modeling formalisms.
- To design CPS requirements based on operating system and hardware architecture constraints.
- To understand the concepts involved in Cyber Physical Systems Security

UNIT 1 INTRODUCTION TO INDUSTRY 4.0 & CYBER PHYSICAL SYSTEM**9 Hrs.**

Industry 4.0 - Globalization and Emerging Issues, The Fourth Revolution - Smart and Connected Business Perspective, Basics of Industrial IoT - Industrial Processes - Industrial Sensing & Actuation, Industrial Internet Systems - Basic principles of design and validation of CPS - Cyber-Physical Systems (CPS) in the real world-Next Generation Sensors, Collaborative Platform and Product Lifecycle Management, Augmented Reality and Virtual Reality, Artificial Intelligence, Trends of Industrial Big Data and Predictive Analytics for Smart Business Transformation

UNIT 2 EMBEDDED SYSTEMS MODELING AND DESIGN AND CPS - PLATFORM COMPONENTS**9 Hrs.**

Embedded Systems definition, specification, and languages. Concepts, requirements, examples. Embedded system models at different abstraction levels. Test benches, design under test, Intellectual Property components. Discrete event simulation, semantics, algorithms. Design, analysis techniques for decentralized computer architectures, communication, and hardware-software systems. -Cyber Physical System Hardware Platform - Processors, Sensors, Actuators - Network - WirelessHart, CAN, Automotive Ethernet - Software stack -Real-Time Operating system (RTOS) -Scheduling Real Time control tasks

UNIT 3 SENSORS, ACTUATORS AND SENSOR NETWORKS & REAL-TIME AND DISTRIBUTED SYSTEMS**9 Hrs.**

Fundamental principles and applications of sensors, actuators. Smart sensors and microsensor/microactuator array devices. Introduction to signal processing and sensor/actuator networks, deployment and architecture, wireless communication, multiple access control layer, data gathering, routing and querying, collaborating signal processing - Time dependent systems, clock synchronization, real-time communication protocols, specification of requirements, task scheduling. Validation of timelines, real-time configuration management. Middleware architecture for distributed real-time and secure services.

UNIT 4 SECURITY OF CYBER PHYSICAL SYSTEMS**9 Hrs.**

Embedded and CPS security - attacks and countermeasures, authentication, identification, confidentiality, data integrity, authorization, access control, malware attacks and counter-measures, security protocols. Privacy issues - vehicular devices and smart metering. Applications of public key and symmetric cryptography, - digital certificates, credentials. Security and vulnerability of cyber-physical infrastructure networks - Mobile and wireless network security, Robust wireless infrastructure - Cloud computing and data security, Event Awareness and System Monitoring for Cyber Physical Infrastructure

UNIT 5 CYBER-PHYSICAL SYSTEMS CASE STUDIES AND PROJECTS**9 Hrs.**

Automotive: SW controllers for Antilock braking system, Adaptive Cruise Control, Lane Departure Warning, Suspension Control - Healthcare: Artificial Pancreas/Infusion Pump/Pacemaker - Green Buildings: automated lighting, AC control - power distribution grid - robotics - civil infrastructure - avionics - Transportation

Max. 45 Hours**COURSE OUTCOMES :**

On completion of the course the student will be able to

- CO1:** An ability to expose the student to real world problems in CPS and Industrial revolution 4.0 best practices.
- CO2 :**Identify the limitations of some computational models.
- CO3 :**Apply the theoretical knowledge the design of compilers.
- CO4 :**Student can Analyze and verify the correctness of CPS implementations against system requirements and timing constraints.
- CO5 :**Categorize the essential modeling formalisms of Cyber-Physical Systems (CPS)
- CO6 :**Ability to understand cyber modelling systems

80 marks

SITA3008	INTERNET OF THINGS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand the concepts of IoT
- To identify the various elements of an IoT System
- To understand the various means of communication from Node / Gateway to Cloud Platforms
- To understand Cloud Computing & its relevance in IoT
- To identify types of data analytics and data visualization tools
- To make students aware of security concerns and challenges while implementing IoT solutions

UNIT 1 INTRODUCTION TO IOT**9 Hrs.**

Introduction to IoT, Current technological trends and future prospects, - Evolution of IoT, Business Scope, Relation with embedded system, - Basic Architecture of an IoT, From M2M to IoT, M2M towards IoT, IoT Value Chains, An emerging industrial structure for IoT.

UNIT 2 ELEMENTS OF IOT**9 Hrs.**

Application Sensors & Actuators - Edge Networking (WSN) - Gateways - IoT Communication Model - WPAN & LPWA, Overview of IoT supported Hardware platforms such as: Raspberry pi, ARM Cortex Processors, Arduino and Intel Galileo boards, Wearable Development Boards

UNIT 3 COMMUNICATION AND CONNECTIVE TECHNOLOGIES**9 Hrs.**

IoT Communication Model, Cloud computing in IoT, IoT in cloud architecture, Logging on to cloud, Selecting and Creating cloud service, cloud based IoT platforms - IBM Watson, Google cloud.

UNIT 4 DATA ANALYTICS AND IOT PLATFORM**9 Hrs.**

Big Data Analytics, Apache Hadoop, Using Hadoop MapReduce for Batch Data Analysis, Apache Storm, Data Visualization, Visualization tools for IoT

UNIT 5 HANDS-ON PROJECTS**9 Hrs.**

Industry 4.0 concepts. Sensors and sensor Node and interfacing using any Embedded target boards (Raspberry Pi / Intel Galileo/ARM Cortex/ Arduino), DIY Kits - Soil moisture monitoring, Weather monitoring, Air quality Monitoring, Movement Detection.

Max. 45 Hours**COURSE OUTCOMES:**

On Completion of course the student will be able to

- CO1** :To learn and understand the technology and current trends in Internet of things.
- CO2** :To understand the various elements of IoT system and hardware devices.
- CO3** :To learn the programming languages and platforms for building IoT applications.
- CO4** :To understand the cloud computing and its relevance for developing IoT applications.
- CO5** :To design and implement IoT applications that manages big data with data analytics and visualization tools.
- CO6** :To implement hands-on projects using an appropriate software and hardware devices in various applications.

SCSA3006	GREEN COMPUTING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To learn the fundamentals of Green Computing.
- To analyze the Green computing Grid Framework.
- To understand the issues related with Green compliance.
- To study and develop various case studies.

UNIT 1 FUNDAMENTALS**9 Hrs.**

Green IT Fundamentals: Business, IT, and the Environment - Green computing: carbon foot print, scoop on power - Green IT Strategies: Drivers, Dimensions, and Goals - Environmentally Responsible Business: Policies, Practices, and Metrics.

UNIT 2 GREEN ASSETS AND MODELING**9 Hrs.**

Green Assets: Buildings, Data Centers, Networks, and Devices - Green Business Process Management: Modeling, Optimization, and Collaboration - Green Enterprise Architecture - Environmental Intelligence - Green Supply Chains - Green Information Systems: Design and Development Models.

UNIT 3 GRID FRAMEWORK**9 Hrs.**

Virtualization of IT systems - Role of electric utilities, Telecommuting, teleconferencing and teleporting - Materials recycling - Best ways for Green PC - Green Data center - Green Grid framework.

UNIT 4 GREEN COMPLIANCE**9 Hrs.**

Socio-cultural aspects of Green IT - Green Enterprise Transformation Roadmap - Green Compliance: Protocols, Standards, and Audits - Emergent Carbon Issues: Technologies and Future.

UNIT 5 CASE STUDIES**9 Hrs.**

The Environmentally Responsible Business Strategies (ERBS) - Case Study Scenarios for Trial Runs - Case Studies - Applying Green IT Strategies and Applications to a Home, Hospital, Packaging Industry and Telecom Sector.

Max. 45 Hours**COURSE OUTCOMES:**

On Completion of course the student will be able to

- CO1:** Acquire knowledge to adopt green computing practices to minimize negative impacts on the environment.
CO2: Enhance the skill in energy saving practices in their use of hardware.
CO3: Evaluate technology tools that can reduce paper waste and carbon footprint by the stakeholders.
CO4: Understand the ways to minimize equipment disposal requirements.
CO5: Satisfy societal requirements
CO6: Apply green computing concepts in real time

SCSA3007	INTRODUCTION TO VISUAL COMPUTING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To gain in depth knowledge of fundamentals of Visual Computing
- Modeling and solving image and video processing and analysis problems.
- Exploiting high level knowledge about human visual perception
- To contribute state-of-the-art solutions for multimedia applications
- To learn the field of visualisation, determining how best to turn data into information.

UNIT1 VISUAL COMPUTING INTRODUCTION**9 Hrs.**

Physiological Foundations-Representation of Light and Color-Image and Noise Models- Basics of Fourier series, Sampling Theorem-Vector Quantization- k-Means Clustering- Mixture Models- Gray Level and Color Quantization-Relationships between Pixels- Camera Geometry- 2D and 3D Transforms, Projections

UNIT2 DIGITAL IMAGE PROCESSING**9 Hrs.**

Digital Image Filtering-Image Transforms-Image Enhancement and Restoration, Wiener Filters, Nonlinear Image Processing (Median filtering)-Nonlinear Diffusion, Gauss-Laplace Pyramid, Wavelets-Scale Space, (Image and Video Compression Image Segmentation-Optical Flow-Stereo Vision-Template Matching, Point Matching

UNIT3 DIGITAL IMAGE GENERATION**9Hrs.**

The Graphics Pipeline- Lighting and Reflection Models- Shading-Texture Analysis and Texture Mapping-Aliasing- Global Illumination-Radiosity-Ray Tracing-Graphics Systems- APIs-3D Graphics Hardware.

UNIT4 REPRESENTATION OF GEOMETRY**9Hrs.**

Parametric Curves-Bézier Curves-B-Splines-NURBS- Tensor Product Surfaces, Triangle Meshes-Subdivision Methods-Shape Models, linear (Gaussian) Diffusion

UNIT5 LEARNING METHODS IN VISION**9Hrs.**

Classifier Learning-Support Vector Machines-Radial Basis Function Networks-Dimension Reduction: PCA, ICA- Linear Discriminant Analysis-Graphical Models- Markov Random Fields-Maximum Entropy Inference and Bayesian Image Analysis

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course, student will be able to

CO1 :Acquaint students with core knowledge in visual information processing and learning

CO2 :Implement Digital Image Processing Mechanisms. .

CO3 :Analyze and design Digital Image Generation Mechanisms

CO4 :Representation of geometry and subdivision methods.

CO5 :Describe the Learning Methods in Vision

CO6 :Comprehend the concepts related three dimensional object representations.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration:3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA3008	DISTRIBUTED DATABASE AND INFORMATION SYSTEMS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COUCOURSE OBJECTIVES

- To understand the role of databases and database management systems in managing organizational data and information.
- To understand the techniques used for data fragmentation, replication and allocation during the distributed database design process.
- To discuss the issues involved in resource management and process.
- To Perceive the building blocks and design of information systems
- To acquire knowledge of information systems on Business operations

UNIT 1 INTRODUCTORY CONCEPTS AND DESIGN OF (DDBMS)**9 Hrs.**

Data Fragmentation - Replication and allocation techniques for DDBMS - Methods for designing and implementing DDBMS - designing a distributed relational database - Architectures for DDBMS - Cluster federated - parallel databases and client server architecture - Overview of query processing.

UNIT 2 DISTRIBUTED SECURITY AND DISTRIBUTED DATABASE APPLICATION TECHNOLOGIES**9 Hrs.**

Overview of security techniques - Cryptographic algorithms - Digital signatures - Distributed Concurrency Control - Serializability theory - Taxonomy of concurrency control mechanisms - Distributed deadlocks - Distributed Database Recovery - Distributed Data Security - Web data management - Database Interoperability.

UNIT 3 ADVANCED IN DISTRIBUTED SYSTEMS**9 Hrs.**

Authentication in distributed systems - Protocols based on symmetric cryptosystems - Protocols based on asymmetric cryptosystems - Password-based authentication - Unstructured overlays - Chord distributed hash table - Content addressable networks (CAN) - Tapestry - Some other challenges in P2P system design - Tradeoffs between table storage and route lengths - Graph structures of complex networks - Internet graphs - Generalized random graph networks.

UNIT 4 FUNDAMENTALS OF INFORMATION SYSTEMS**9 Hrs.**

Defining information - Classification of information - Presentation of information systems - Basics of Information systems - Functions of information systems - Components of Information systems- Limitations of Information systems - Information System Design.

UNIT 5 ENTERPRISE COLLABORATION SYSTEMS**9 Hrs.**

Groupware - Types of groupware - Enterprise Communication tools - Enterprise Conferencing tools - Collaborative work management tools - Information System for Business operations - transaction processing systems - functional Information Systems - Decision Support systems - Executive Information systems - Online Analytical processing.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course the student will be able to

CO1 :Identify the introductory distributed database concepts and its structures.

CO2 :Produce the transaction management and query processing techniques in DDBMS..

CO3 :To develop in-depth understanding of relational databases and skills to optimize database performance in practice.

CO4 :Critiques on each type of databases.

CO5 :Analyse, Design and present the information systems.

CO6 :Designing of decision support system and tools for Business operations.

80 marks

SCSA3009	SOFT COMPUTING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To learn the various types of soft computing frameworks.
- To understand the knowledge about Genetic Algorithms.
- To design various types of neural networks.
- To understand the concepts of neuro fuzzy.
- To gain knowledge on Fuzzy Logic.

UNIT 1 NEURAL NETWORKS**9Hrs.**

Introduction to ANN - Adaline - Back propagation network - Hopfield network - Boltzman machine - Self organizing maps - Support Vector Machines - Spike Neuron Models.

UNIT 2 FUZZY LOGIC**9Hrs.**

Fuzzy sets - Fuzzy rules and fuzzy reasoning - Defuzzification - Fuzzy inference system - Mamdani fuzzy model - Sugeno fuzzy model - Tsukamoto fuzzy model.

UNIT 3 NEURO FUZZY**9Hrs.**

Adaptive Neuro Fuzzy Inference System - Coactive neuro-fuzzy modelling - Classification and regression trees - Data Clustering Algorithm - Rule based structure - Neuro - Fuzzy control I - Neuro -Fuzzy control II - Fuzzy decision making.

UNIT 4 GENETIC ALGORITHM**9Hrs.**

Introduction - Implementation of GA - Reproduction - Crossover - Mutation - Coding - Fitness scaling - Application of GA.

UNIT 5 ARTIFICIAL INTELLIGENCE**9Hrs.**

Introduction - Searching techniques - First order Logic - Forward reasoning - Backward reasoning - Semantic - Frames.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course the student will be able to

CO1: Describe human intelligence and how intelligent system works.

CO2: Apply basics of Fuzzy logic and neural networks.

CO3: Discuss the ideas of fuzzy sets, fuzzy logic and use of heuristics based on human experience.

CO4: Discuss about Neuro Fuzzy concepts.

CO5: Describe with genetic algorithms and other random search procedures useful while seeking global optimum in self-learning situations.

CO6: Develop some familiarity with current research problems and research methods in Soft Computing Techniques.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration: 3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SITA3009	CYBER FORENSICS AND CYBER LAW	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To introduce Cyber Forensic Theory and cyber laws.
- To understand the concept of data and recovery evidence for different platforms.
- To designed Forensics Investigation and laws.
- To understand the concepts of cyber security and legal systems of information technology.
- To gain knowledge on reverse engineering and cracking techniques.

UNIT 1**9 Hrs.**

Cyber Forensic Basics- Cyber Forensic Basics- Introduction to Cyber Forensics, Storage Fundamentals, File System Concepts, Data Recovery, Operating System Software and Basic Terminology.

UNIT 2**9 Hrs.**

Data and Evidence Recovery- Introduction to Deleted File Recovery, Data Recovery Tools, Data Recovery Procedures and Ethics, Preserve and safely handle original media, Document a "Chain of Custody", Complete time line analysis of computer files based on file creation, file modification and file access, Recover Internet Usage Data, Recover Swap Files/Temporary Files/Cache Files, Introduction to Encase Forensic Edition, Forensic Tool Kit (FTK) etc,

UNIT 3**9 Hrs.**

Cyber Forensics Investigation- Introduction to Cyber Forensic Investigation, Investigation Tools, eDiscovery, Digital Evidence Collection, Evidence Preservation, E-Mail Investigation, E-Mail Tracking, IP Tracking, E-Mail Recovery, Encryption and Decryption methods, Search and Seizure of Computers, Recovering deleted evidences, Password Cracking.

UNIT 4**9 Hrs.**

Cyber Laws- Introduction to IT laws & Cyber Crimes - Internet, Hacking, Cracking, Viruses, Virus Attacks, Pornography, Software Piracy, Intellectual property, Legal System of Information Technology, Social Engineering, Mail Bombs, Bug Exploits, and Cyber Security etc.

UNIT 5**9 Hrs.**

Cyber Security- Introduction to Cyber Security, Implementing Hardware Based Security, Software Based Firewalls, Security Standards, Assessing Threat Levels, Reporting Cyber-crime, Operating System Attacks, Application Attacks, Reverse Engineering & Cracking Techniques and Financial Frauds

COURSE OUTCOMES:

On completion of the course the student will be able to

- CO1:** Understand the definition of computer forensics fundamentals.
- CO2 :**Describe the types of computer forensics technology.
- CO3 :**Analyse various computer forensics systems.
- CO4 :**Illustrate the methods for data recovery, evidence collection and data seizure.
- CO5 :**Summarize duplication and preservation of digital evidence.
- CO6 :**To apply the concepts in engineering system.

Max. 45 Hours**TEXT / REFERENCE BOOKS :**

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration: 3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA3012	KNOWLEDGE MANAGEMENT SYSTEMS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand the fundamental concepts in the study of knowledge and its creation, acquisition, representation.
- To learn the technologies to use and manage the knowledge.
- To understand how to apply and integrate appropriate components and functions of various knowledge management systems.
- To know the core concepts, methods, techniques, and tools for computer support of knowledge management.
- To be prepared for further study in knowledge generation and engineering.

UNIT 1 INTRODUCTION**9Hrs.**

Overview of Knowledge Management: The Nature of Knowledge - Data, Information and Knowledge with Examples - Types of Knowledge-Subjective View of knowledge-Objective View of knowledge-Procedural vs. Declarative Knowledge-Tacit vs. Explicit Knowledge - General vs. Specific Knowledge - Technically vs. Contextually Specific Knowledge - Knowledge and Expertise - Types of Expertise - Codifiability and Teachability of Knowledge - Specificity of Knowledge - Reservoirs of Knowledge - Characteristics of Knowledge.

UNIT 2 COMPONENTS AND TECHNOLOGIES IN KMS**9Hrs.**

Major components of KMS-Categories of KMS-Technologies to Manage Knowledge-Digital Libraries- Repositories- Cognitive Psychology - Kinds of Knowledge- Expert Knowledge-Thinking and Learning in Humans -Knowledge vs. Intelligence - Knowledge Based Systems for KM :dumb search, Heuristic search .

UNIT 3 KNOWLEDGE ARCHITECTURE**9Hrs.**

Knowledge Management Systems Life Cycle-Challenges in KM Systems Development-Conventional Vs KM Systems Life Cycle (KMSLC)-Key Differences-Key Similarities and KMSLC Approaches - Knowledge Architecture- Knowledge Creation-Nonaka's Model of Knowledge Creation & Transformation-Knowledge Architecture-Acquiring the KM System.

UNIT 4 KMS TOOLS AND TECHNIQUES**9Hrs.**

Knowledge Discovery: Systems that Create Knowledge -Knowledge Capture Systems: Systems that Preserve and Formalize Knowledge - Concept Maps, Process Modelling, RSS-Wikis-Delphi Method-Knowledge Sharing Systems- Systems that Organize and Distribute Knowledge- Ontology Development Systems-Categorization and Classification Tools - XML-Based Tools - Capturing Techniques- On-Site Observation (Action Protocol) -Brainstorming, Electronic Brainstorming - Protocol Analysis (Think-Aloud Method) - Consensus Decision Making, Repertory Grid - Nominal Group Technique (NGT) - Delphi Method - Concept Mapping - Black boarding .

UNIT 5 APPLICATION AND FUTURE TRENDS**9Hrs.**

Components Of A Knowledge Strategy - Case Studies - Discovering New Knowledge - Data Mining - Classical statistics & statistical pattern recognition - Induction of symbolic rules -Induction trees - Artificial Neural Networks - Supervised Learning - Back Propagation -Unsupervised Learning - Kohonen Network -The Future of Knowledge Management - Protecting Intellectual Property (IP)

Max. 45 Hours

COURSE OUTCOMES: On completion of the course the student will be able to

- CO1:**An ability to create and represent knowledge to solve a problem.
CO2 :Interpret data for knowledge management systems.
CO3 :Identify the various knowledge architectures.
CO4 :Apply the theoretical knowledge to acquire new systems.
CO5 :Use the knowledge management tools.
CO6 :Develop Knowledge Management Applications

END SEMESTER EXAM QUESTION PAPER PATTERN

Max. Marks: 100

Exam Duration: 3 Hrs.

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA3013	SYSTEM MODELING AND SIMULATION	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To introduce various system modeling and simulation techniques and highlight their applications in different areas.
- To discuss about modeling, design, simulation, planning, verification and validation.
- To understand various mathematical models.
- To validate and verify the simulated model.
- To understand simulation programming.

UNIT1 INTRODUCTION TO SIMULATION**9 Hrs.**

Introduction - Simulation Terminologies - Application areas - Model Classification - Types of Simulation - Steps in a Simulation study - Concepts in Discrete Event Simulation - Simulation Examples .

UNIT2 MATHEMATICAL MODELS**9Hrs.**

Statistical Models - Concepts - Discrete Distribution- Continuous Distribution - Poisson Process- Empirical Distributions - Queuing Models - Characteristics- Notation- Queuing Systems - Markovian Models - Generation of Pseudo Random numbers- Properties of random numbers - Techniques for generating random numbers - Testing random number generators - -Generating Random-Variates- Inverse Transform technique- Acceptance- Rejection technique - Composition & Convolution Method.

UNIT3 ANALYSIS OF SIMULATION DATA**9Hrs.**

Input Modeling - Data collection - Assessing sample independence- -Hypothesizing distribution family with data - Parameter Estimation - Goodness-of-fit tests - Selecting input models in absence of data - Output analysis for a Single system - Terminating Simulations- Steady state simulations.

UNIT4 VERIFICATION AND VALIDATION**9 Hrs.**

Model Building - Verification of Simulation Models - Calibration and Validation of Models - Validation of Model Assumptions - Validating Input - Output Transformations

UNIT 5 SIMULATION OF COMPUTER SYSTEMS AND CASE STUDIES**9 Hrs.**

Simulation Tools - Model Input - High level computer system simulation - CPU Memory Simulation - Comparison of systems via simulation - Simulation Programming techniques - Development of Simulation models .

MAX. 45 Hours**COURSE OUTCOMES:**

On completion of the course, student will be able to

CO1:Describe the components of continuous and discrete systems and simulate them.

CO2 :Explain the need for the development process to initiate the real problem.

CO3 :Simulate any discrete system using queuing systems.

CO4 :Implement numerical algorithm to meet simple requirements.

CO5 :Discuss the simulation methods and select the suitable technique on the problems

CO6 :Model any system from different fields.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration:3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA3014	OPEN SOURCE SYSTEMS	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand open source licenses and learn the implications for users, developers and the software community.
- To Understand the motivation, theory, strengths and weakness of open source software.
- To become familiar with and become adapt using the tools of open source development.
- To learn GNU.
- To practice open source programming techniques.

UNIT 1 OVERVIEW OF FREE/OPEN SOURCE SOFTWARE**9 Hrs.**

Overview of Free/Open Source Software - Definition of FOSS & GNU - History of GNU/Linux and the free software movement -Advantages of free software and GNU/Linux -Licensing - Types of licensing , Intellectual Proprietary Right, Commercial License vs. Open source license- Open Source Licensing, Contract and Copyright Law: Basic principles of copyright law, contract and copyright, open source software licensing, Issues with copyrights and patents, warranties . The FOSS Philosophy, usage -Trends and potential -global and Indian -. FOSS Licenses - GPL- AGPL- LGPL - FDL - Implications - FOSS examples . Review of common programming practices and guidelines for GNU/Linux and FOSS.

UNIT 2 LINUX**9 Hrs.**

Linux OS Installation and Hardware Configuration - Configure disk partitions & file systems and install a GNU/Linux distribution -Basic shell commands - Logging in, Listing files, editing files, copying/moving files, viewing file contents, changing file modes and permissions, process management User and group management -File ownerships and permissions -PAM authentication -Introduction to common system configuration files & log files -Configuring networking - Basics of TCP/IP networking and routing -Connecting to the Internet ,System Administration - Backup and Restore Procedures- Strategies for keeping a Secure Server.

UNIT 3 OPEN SOURCE TOOLS AND TECHNOLOGIES FOR HARDWARE AND E-MAIL SERVER**9 Hrs.**

Configuring additional hardware -Sound cards -Displays & display cards-Network cards -Modems -USB drives -CD writers -The OS boot up process -Performing every day tasks using GNU /Linux - Accessing the Internet -Playing music -Editing documents and spreadsheets -Sending and receiving email -Copy files from disks and over the network -Playing games - Writing CDs -X Window system configuration and utilities -Configure X windows -Detect display devices -Installing software -From source code as well as using binary packages -Setting up email servers-Using postfix -(SMTP services) -Courier (IMAP & POP3 services) -Squirrel mail (web mail services) -Setting up web servers - Using apache (HTTP services) -PHP (server-side scripting) -Perl (CGI support) -Setting up file services -Using samba (file and authentication services for windows networks) -Using NFS (file services for gnu/Linux / Unix networks) -Setting up proxy services -Using squid (http / ftp / https proxy services) - Printer Installation.

UNIT 4 UNDERSTANDING GNU LIBC LIBRARIES, COMPILERS AND LINKER**9 Hrs.**

GNU compiler tools - The C compiler (gcc) and the C++ compiler (g++) - Linking against object archives (.a libraries) and dynamic shared object libraries (.so libraries) -Generating statically linked binaries and libraries -Generating dynamically linked libraries -Using the GNU debugging tools -Gdb to debug programs -Graphical debuggers like ddd - Memory debugging/profiling libraries mpatrol and valgrind -Introduction to Bash, sed & awk scripting.

UNIT 5 OPEN SOURCE PROGRAMMING TECHNIQUES**9 Hrs.**

Application Programming -Basics of the X Windows server architecture -Qt programming -Gtk+ programming -Python programming - Execution Environment - Programming GUI applications with localisation support, Open Source Equivalent of existing commercial software.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course, student will be able to

- CO1:** Understands the importance of open source and how it can be used in efficient manure.
- CO2:** Understands the importance of licensing, legal impacts.
- CO3:** Configured Hardware using OPEN SOURCE TOOLS AND TECHNOLOGIES
- CO4:** Get experiences with python programming language.
- CO5:** Understand various system software tools
- CO6:** Implement various applications using open source software.

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA3015	DEEP LEARNING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To present the mathematical, statistical and computational basis of neural networks.
- To study the concepts of deep learning.
- To introduce dimensionality reduction techniques.
- To enable the students to know deep learning techniques to support real-time applications.
- To examine the case studies of deep learning techniques.

UNIT1 INTRODUCTION**9 Hrs.**

Introduction to machine learning- Linear models (SVMs and Perceptrons, logistic regression)- Intro to Neural Nets: What a shallow network computes- Training a network: loss functions, back propagation and stochastic gradient descent- Neural networks as universal function approximates.

UNIT 2 DEEP NETWORKS**9 Hrs.**

History of Deep Learning- A Probabilistic Theory of Deep Learning- Backpropagation and regularization, batch normalization- VC Dimension and Neural Nets-Deep Vs Shallow Networks- Convolutional Networks- Generative Adversarial Networks (GAN), Semi-supervised Learning.

UNIT 3 DIMENTIONALITY REDUCTION**9Hrs.**

Linear (PCA, LDA) and manifolds, metric learning - Auto encoders and dimensionality reduction in networks - Introduction to Convnet - Architectures - AlexNet, VGG, Inception, ResNet - Training a Convnet: weights initialization, batch normalization, hyper parameter optimization.

UNIT 4 OPTIMIZATION AND GENERALIZATION**9 Hrs.**

Optimization in deep learning- Non-convex optimization for deep networks- Stochastic Optimization- Generalization in neural networks- Spatial Transformer Networks- Recurrent networks, LSTM - Recurrent Neural Network Language Models- Word-Level RNNs & Deep Reinforcement Learning - Computational & Artificial Neuroscience

UNIT 5 CASE STUDY AND APPLICATIONS**9 Hrs.**

Imagenet- Detection-Audio WaveNet-Natural Language Processing Word2Vec - Joint Detection- BioInformatics- Face Recognition- Scene Understanding- Gathering Image Captions.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course, student will be able to

CO1: Understand basics of deep learning.

CO2 :Implement various deep learning models.

CO3 :Realign high dimensional data using reduction techniques.

CO4 :Analyze optimization and generalization in deep learning.

CO5 :Explore the deep learning applications.

CO6 :Design and creation of data models.

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA3016	DATA SCIENCE	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand the mathematical foundations required for data science
- To describe a flow process for data science problems
- To introduce basic data science algorithms and data visualization
- To learn machine tools and techniques.
- To learn the ideas and tools for data visualization.

UNIT1 LINEAR ALGEBRA**9Hrs.**

Algebraic view - vectors 2D, 3D and nD, matrices, product of matrix & vector, rank, null space, solution of over determined set of equations and pseudo-inverse.

Geometric view - vectors, distance, projections, eigenvalue decomposition, Equations of line, plane, hyperplane, circle, sphere, Hypersphere.

UNIT2 PROBABILITY AND STATISTICS**9Hrs.**

Introduction to probability and statistics, Population and sample, Normal and Gaussian distributions, Probability Density Function, Descriptive statistics, notion of probability, distributions, mean, variance, covariance, covariance matrix, understanding univariate and multivariate normal distributions, introduction to hypothesis testing, confidence interval for estimates

UNIT3 EXPLORATORY DATA ANALYSIS AND THE DATA SCIENCE PROCESS**9 Hrs.**

Exploratory Data Analysis and the Data Science Process - Basic tools (plots, graphs and summary statistics) of EDA - Philosophy of EDA - The Data Science Process - Data Visualization - Basic principles, ideas and tools for data visualization - Examples of exciting projects- Data Visualization using Tableau

UNIT4 MACHINE LEARNING TOOLS, TECHNIQUES AND APPLICATIONS**9 Hrs.**

Supervised Learning, Unsupervised Learning, Reinforcement Learning, Dimensionality Reduction, Principal Component Analysis, Classification and Regression models, Tree and Bayesian network models, Neural Networks, Testing, Evaluation and Validation of Models

UNIT5 INTRODUCTION TO PYTHON**9Hrs.**

Data structures-Functions-Numpy-Matplotlib-Pandas- problems based on computational complexity-Simple case studies based on python (Binary search, common elements in list), Hash tables, Dictionary

Max. 45 Hours

COURSE OUTCOMES: On completion of the course, student will be able to

- CO1** :Explain the basic terms of Linear Algebra and Statistical Inference.
CO2 :Describe the Data Science process and its components interaction.
CO3 :Apply EDA and the Data Science process in a case study.
CO4 :Classify Data Science problems.
CO5 :Analyse and correlate the results to the solutions.
CO6 :Simulate Data Visualization in exciting projects.

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SEIA3006	ROBOTICS AND AUTOMATION	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To introduce basic concepts of various dynamics processes
- To educate on the effect of various power sources and sensors.
- To impart knowledge on the manipulators, grippers and robot dynamics

UNIT 1 BASIC CONCEPTS 9 Hrs.

Origin & various generation of Robots - Robot definition - Robotics system components - Robot classification Coordinate frames - Asimov's laws of robotics - degree of freedom - dynamic stabilization of robots.- work volume. Need for Automation - types of automation - fixed, programmable and flexible automation.

UNIT 2 POWER SOURCES AND SENSORS 9 Hrs.

Hydraulic, pneumatic and electric drives - determination of HP of motor and gearing ratio - variable speed arrangements - path determination - micro machines in robotics - machine vision - ranging - laser - acoustic - magnetic, fiber optic and tactile sensors.

UNIT 3 MANIPULATORS, ACTUATORS, GRIPPERS and ROBOT DYNAMICS 9 Hrs.

Construction of manipulators - manipulator dynamics and force control - electronic and pneumatic manipulator control circuits - end effectors - various types of grippers - design considerations. Introduction to Robot Dynamics - Lagrange formulation - Newton Euler formulation - Properties of robot dynamic equations.

UNIT 4 KINEMATICS AND PATH PLANNING 9 Hrs.

Forward Kinematics - Denavit Hartenberg Representation. multiple solution jacobian work envelop, Inverse Kinematics - Geometric approach. Hill climbing techniques.

UNIT 5 PROGRAMMING LANGUAGES AND APPLICATIONS 9 Hrs.

Robot programming - Fixed instruction, sequence control, General programming language, Specific programming languages. Robots for welding, painting and assembly - Remote Controlled robots - robots in manufacturing and non-manufacturing applications - Robots for nuclear and chemical plants.

Max. 45 Hours**Course Outcomes:**

On completion of the course, student will be able to-

CO1: Understand the concepts of Robotics.

CO2: Define the laws of robotics and identify the types.

CO3: Classify the different types of sensors and summarize the techniques of image processing

CO4: Choose the type of gripper as per requirement and explain the dynamics of robots.

CO5: Compare the different kinematic techniques.

CO6: Develop a robot

80 Marks

SCSA3017	QUANTUM COMPUTING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To introduce the basics of Quantum Computing
- To understand Quantum state transformation and classical computation versions
- To know various Quantum Computation Algorithms.
- To have knowledge on Generalizations and advanced quantum computation algorithms
- To be proficient on the concepts of robust computation and error correction

UNIT 1 QUANTUM BUILDING BLOCKS-I**9Hrs.**

Introduction - Single Qubit Quantum Systems - Multiple Qubit Systems.

UNIT 2 QUANTUM BUILDING BLOCKS-2**9Hrs.**

Measurement of multiple Qubit Systems-Quantum State Transformations-Quantum versions of Classical Computations.

UNIT 3 BASIC ALGEBRA FOR QUANTUM ALGORITHMS**9Hrs.**

Introduction-Numbers and Strings-Basic linear algebra-Boolean Functions, Quantum, Bits and Feasibility, Special Matrices, Tricks.

UNIT 4 QUANTUM ALGORITHMS**9Hrs.**

Phil's algorithm, Deutsch's algorithm, Jozsa Algorithms, Simon's Algorithm, Shor's Algorithms, Grover's Algorithms.

UNIT 5 ENTANGLED SUBSYSTEMS AND ROBUST QUANTUM COMPUTATIONS**9Hrs.**

Quantum subsystems and properties of entangled states-Quantum error correction-Fault tolerance and Robust

Max. 45 Hours**COURSE OUTCOMES :** On completion of the course the student will be able to

- CO1:** An ability to identify, analyze the building Blocks.
CO2 : Know Quantum state transitions.
CO3 : Identify the advantages and limitations of Quantum Computational Algorithms.
CO4 : Apply advanced quantum computation algorithms.
CO5 : Investigate the concepts of robust computation and error corrections.
CO6 : Analyze error correction mechanisms.

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SITA3010	NATURAL LANGUAGE PROCESSING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To learn the fundamentals of natural processing
- To understand the way to measure one or more qualities of an algorithm or a system
- To gain knowledge of the linguistics concerned with the interactions between computers and human.
- To learn knowledge representation and reasoning.
- To learn the techniques in logic model, Theoretic semantics and Symbolic computation.

UNIT 1 INTRODUCTION**9 Hrs.**

Introduction and challenges of natural language processing, Phases in natural language processing, An outline of English syntax - Grammars and parsing - Features and Augmented Grammar.

UNIT 2 SYNTACTIC PROCESSING**9 Hrs.**

Grammar for natural language - Toward efficient parsing - Ambiguity resolution - Statistical Methods, Feature Structure

UNIT 3 SEMANTIC INTERPRETATION**9Hrs.**

Semantic and logical form - Linking syntax and semantics - Ambiguity resolution - Other strategies for semantic interpretation - Scoping for interpretation of noun phrases, Semantic attachments-Word senses, Relations between the senses.

UNIT 4 CONTEXT AND WORLD KNOWLEDGE**9 Hrs.**

Knowledge representation and reasoning - Using World Knowledge, Discourse Structure, Local discourse context and reference.

UNIT 5 WORLD KNOWLEDGE AND SPOKEN LANGUAGE**9 Hrs.**

Using world knowledge - Discourse structure - Defining conversational agent - An introduction to logic model - Theoretic semantics - Symbolic computation - Speech recognition and spoken Language, Applications: Machine Translation, Information Retrieval.

Max. 45 Hours**COURSE OUTCOMES:**

On completion of the course, student will be able to

CO1 :Understand NLP problems and its literature survey.

CO2 :Understand language models.

CO3 :Describe automated natural language generation and machine translation.

CO4 :Learn the natural language generation.

CO5 :Analyze and compare the use of different statistical approaches for different types of NLP applications.

CO6 :Implement the techniques in information retrieval..

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA3018	PARALLEL SYSTEM PROGRAMMING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand the concepts of parallel computing and Algorithm Design.
- To learn the popular parallel programming paradigms SIMD, MIMD (Message passing and Shared memory).
- To understand major performance issues for parallel systems and programs.
- To reiterate hot topics in research on parallel Programming.
- To learn CUDA architectures.

UNIT1 INTRODUCTION TO PARALLEL COMPUTING**9 Hrs.**

Motivating Parallelism- Scope of Parallel Computing- The von Neumann architecture- Modifications to the von Neumann Model- Parallel Hardware: SIMD systems- MIMD systems-Interconnection networks- Cache coherence - Shared memory versus distributed memory. Parallel Software: Caveats- Coordinating the processes/threads- Shared- Distributed-memory -Programming hybrid systems.

UNIT2 PRINCIPLES OF PARALLEL ALGORITHM DESIGN**9 Hrs.**

Preliminaries - Decomposition techniques - Characteristics of tasks and interactions - Mapping techniques for load balancing - Methods for containing interaction overheads - Parallel algorithm models - Basic communication operations.

UNIT3 PROGRAMMING USING MESSAGE PASSING**9 Hrs.**

Principles of Message-Passing Programming - The Building Blocks: Send and Receive Operations- MPI: the Message Passing Interface -Topologies and Embedding Section - Overlapping Communication with Computation - Collective Communication and Computation Operations - Groups and Communicators.

UNIT4 PROGRAMMING USING SHARED MEMORY**9 Hrs.**

Shared Memory Programming with Pthreads: Processes, Threads, and Pthreads - Matrix-Vector Multiplication - Critical Sections- Producer-Consumer Synchronization and Semaphores- Barriers and Condition Variables-Read-Write Locks-Caches, Cache Coherence, and False Sharing.

Shared Memory Programming with OpenMP: Compiling and running OpenMP programs-The Trapezoidal Rule-Scope of Variables-The Reduction Clause-The parallel for Directive-Scheduling Loops-Producers and Consumers

UNIT5 PROGRAMMING PARALLEL PROCESSORS**9 Hrs.**

Introduction to CUDA - CUDA Threads - CUDA Memories - Performance and Floating Point Considerations- Parallel Programming and Computational Thinking- Introduction to OPENCL.

Max. 45 Hours**COURSE OUTCOMES :**

On completion of the course the student will be able to

- CO1:**Recognize various parallel computing requirements.
- CO2:**Describe the basic concepts of Shared Memory and Message Passing.
- CO3:**Design solutions for Parallel Processor based Architectures.
- CO4:**Analyse a problem, design a solution and test their implementation.
- CO5:**Design and implement large scale machine as well as applications.
- CO6:**Implement parallel computing to a variety of applications in Mathematics and Engineering.

Part A: 10 question of 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA3019	AUGMENTED AND VIRTUAL REALITY	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To make students to know the basic concepts and framework in virtual reality.
- To teach students the principles and multidisciplinary features in virtual reality.
- To teach students the technology for multimodal user interaction and perception in VR, in particular the visual, audial and haptic interface and behavior.
- To teach students the technology for managing large scale VR environment in real time.
- To provide students with an introduction to the VR system framework and development tools.

UNIT 1 INTRODUCTION OF VIRTUAL REALITY**9 Hrs.**

Fundamental Concept and Components of Virtual Reality- Primary Features and Present Development on Virtual Reality - VR systems - VR as a discipline-Basic features of VR systems-Architecture of VR systems-VR hardware -VR input hardware: tracking systems, motion capture systems, data gloves-VR output hardware: visual displays.

UNIT 2 I/O INTERFACE & TECHNIQUES IN VR**9 Hrs.**

Multiple Modals of Input and Output Interface in Virtual Reality: Input -- Tracker, Sensor, Digital Glove, Movement Capture, Video-based Input, 3D Menus & 3DScanner etc. Output -- Visual / Auditory / Haptic Devices. Interactive Techniques in Virtual Reality: Body Track, Hand Gesture, 3D Manus, Object Grasp.

UNIT 3 VISUAL COMPUTATION IN VIRTUAL REALITY**9Hrs.**

Fundamentals of Computer Graphics-Software and Hardware Technology on Stereoscopic Display-Advanced Techniques in CG: Management of Large Scale Environments & Real Time Rendering -Development Tools and Frameworks in Virtual Reality: Frameworks of Software Development Tools in VR. X3D Standard; Vega, MultiGen, Virtoolsetc

UNIT 4 INTRODUCTION OF AUGMENTED REALITY**9Hrs.**

System Structure of Augmented Reality-Key Technology in AR-- AR software development - AR software. Camera parameters and camera calibration. Marker-based augmented reality. Pattern recognition. AR Toolkit

UNIT 5 APPLICATION OF VR IN DIGITAL ENTERTAINMENT**9Hrs.**

VR Technology in Film & TV Production.VR Technology in Physical Exercises and Games. Demonstration of Digital Entertainment by VR.3D user interfaces - Why 3D user interfaces. Major user tasks in VE.Interaction techniques for selection, manipulation and navigation.3DUI evaluation.

Max. 45 Hours**COURSE OUTCOMES :**

On completion of the course, the student will be able to

CO1:Design and implement the VR system.

CO2:Implement the Augmented Reality software.

CO3:Analyze and design the framework in VR using various software development tools in VR.

CO4:Design the multi modal user interface.

CO5:Describe the principles and features of VR and AR.

CO6:Recognize the technologies used to manage the large scale VR environment in real time.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration:3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SITA3011	BLOCK CHAIN TECHNOLOGIES	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To introduce Bit coin and other crypto currencies.
- To study the algorithms and techniques in block chain.
- To understand the practical aspects in the design of crypto currency
- To understand the function of Block chains as a method of securing distributed ledgers.
- To design, code, deploy and execute a smart contract.

UNIT 1 INTRODUCTION TO BLOCKCHAIN**9Hrs.**

Basics of blockchain-Public Ledgers-Block Chain as Public Ledgers-Types of Block chains- Pillars of Block chain-Government Initiatives of BlockChain-Bitcoin-SmartContracts

UNIT 2 ARCHITECTURE AND CONCEPTUALIZATION OF BLOCK CHAIN, CRYPTO CURRENCIES**9Hrs.**

Block in a Block chain-find Transactions-Distributed Consensus-Proof of work, Stake, Space-Attacks on POW-Ethereum-Pos/POW Hybrids-Crypto currency to block chain 2.0, Model of Blockchain-Algorand

UNIT 3 CRYPTO PRIMITIVES, SECURING AND INTERCONNECTING PUBLIC AND PRIVATE BLOCK CHAINS**9Hrs.**

Hash Function and Merle Tree-Security Properties-Security Considerations for block chain-Digital Signature-Public Key Cryptography-Bit coinblock chain incentive structures- Nash Equilibriums- evolutionary stable strategies,-and Pareto efficiency (game theory) Weaknesses and news Points of Failure Mitigation Methods Redundancies and fall-back methods

UNIT 4 MINING AND CRYPTO CURRENCIES - HOW TO USE AND INTERACT**9Hrs.**

Mining-Pools-Impact of CPU and GPU-Transaction in Bit coin Network- Block Mining-Block propagation and block relay

UNIT 5 USE CASES-APPLICATIONS IN DIFFERENT AREAS**9 Hrs.**

Industry applications of Blockchain-Blockchain in Government-Government use cases-Preventing Cybercrime through block chain-Block Chain in defense, tax payments

COURSE OUTCOMES :

On completion of the course the student will be able to

- CO1:** Explain the structure of a block chain.
- CO2 :**Analyze the incentive structure in a block chain based system.
- CO3 :**Judge the scenario where "smart" contract is most appropriate.
- CO4 :**Identify Basic knowledge of Bitcoin, Ethereum.
- CO5 :**Apply Blockchain in future use cases for security.
- CO6 :**Understand the various Block Chain applications.

END SEMESTER EXAM QUESTION PAPER PATTERN**Max. Marks: 100****Exam Duration:3 Hrs.**

Part A: 10 questions carrying 2 marks each - No choice

20 marks

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SITA1602	CYBER SECURITY	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To explore the aspects of classic and public key cryptography
- To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity
- To become aware of system security components
- To know the technological aspects of security
- To explore the vulnerabilities in any computing system

UNIT 1 INTRODUCTION**9 Hrs.**

Basic Concepts - Security Architecture, Attacks, Services, Mechanisms, Model - Cryptography Basics - Symmetric Ciphers - Transposition, Substitution, Rotor Machines - Block Cipher - Data Encryption Standard - Confidentiality using Symmetric Encryption

UNIT 2 PUBLIC KEY CRYPTOGRAPHY**9 Hrs.**

Principles - RSA algorithm - Key Management - Diffie Hellman Key Exchange - Message Authentication - Requirements, Functions, Message Authentication - Hash Functions - Digital Signatures - Authentication Protocols

UNIT 3 SYSTEM SECURITY**9 Hrs.**

Intruders - Detection - Password Management - Malicious Software - Virus - Countermeasures - Distributed Denial of Service Attacks - Firewalls - Design Principles - Trusted Systems

UNIT 4 OPERATIONS AND PHYSICAL SECURITY**9 Hrs.**

Origin - Process - Laws - Physical Security - Controls - Protecting People - Protecting Data - Protecting Equipment

UNIT 5 APPLICATION SECURITY**9 Hrs.**

Software Development Vulnerabilities - Buffer Overflow - Race Condition - Web Security - Database Security - Tools

Max. 45 Hours.**COURSE OUTCOMES:**

On completion of the course, the student will be able to:

- CO1: Identify the basics of cryptography
- CO2: Provide security of the data over the network.
- CO3: Explore the aspects of system security
- CO4: Illustrate operations and physical security aspects
- CO5: Analyse the vulnerabilities in any computing system and hence be able to design a security solution
- CO6: Design and implement secure applications.

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

80 marks

SCSA1303	SOFTWARE ENGINEERING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- Software process models and compare their applicability.
- Identify the key activities in managing a software project.
- Concepts of requirements engineering and Analysis Modelling.
- Apply systematic procedure for software design and deployment.
- Compare and contrast the various testing and maintenance.

UNIT1 SOFTWARE PROCESS AND PROJECT MANAGEMENT**9Hrs.**

The evolving role of software - the changing nature of software- Life cycle models - Water fall - Incremental - Spiral - Evolutionary-Prototyping-Concurrent development-Specialised process models-Verification-Validation-Lifecycle process-Development process-System engineering hierarchy-Introduction to CMM-Level of CMM.

UNIT2 REQUIREMENT ANALYSIS AND SPECIFICATIONS**9Hrs.**

Functional And Non-Functional - User - System - Requirement Engineering Process - Feasibility Studies - communication practices- Requirements - Elicitation - Validation and management - Fundamental of requirement analysis - Analysis principles - Structured System Analysis - Software prototyping - Prototyping in the Software Process - Data - Functional and Behavioral Models-Structured Analysis and Data Dictionary.

UNIT3 SOFTWARE DESIGN**9Hrs.**

Design process - Modular design - Design heuristic - Design model and document - Architectural design - Software architecture - Data design - Architecture data - Transform and transaction mapping - User interface design - User interface design principles.

UNIT4 TESTING AND IMPLEMENTATION**9Hrs.**

Levels - Software Testing Fundamentals - Types of s/w test - White box testing- Basis path testing - Black box testing -Control Structure testing- Regression testing strategies - Strategic approach and issues - UNIT testing - Integration testing -Validation testing - System testing and debugging. Case studies - Writing black box and white box testing-Coding Practices-Refactoring.

UNIT5 PROJECT MANAGEMENT AND ESTIMATION**9Hrs.**

Software cost estimation - COCOMO model - Quality management - Quality concepts- SQA - Software reviews - Formal technical reviews - Formal approaches of SQA and software reliability - Software maintenance - SCM - Need for SCM -Version control - Introduction to SCM process - Software configuration items. Re-Engineering - Software reengineering -Reverse engineering-Restructuring-Forward engineering.

Max.45Hrs.**COURSE OUTCOMES**

On completion of the course, student will be able to:

- CO1-Identify and apply software life cycle model for a given problem and will know the criteria for each level of CMM.
- CO2-Comprehend types of requirements and summarize Requirement Engineering Process.
- CO3-Design data,functional and behavioral model for any given software requirement.
- CO4-Identify and analyze levels of testing and perform white box testing and blackbox testing for a given problem.
- CO5-Describe concepts of software equality assurance and software configuration management.
- CO6-Compare and contrast forward engineering, reverse engineering and reengineering.

Part B: 2 questions from each unit of internal choice, each carrying 16 marks

Exam Duration: 3 Hrs.

20 marks

80 marks

SITA1501	WIRELESS SENSOR NETWORK AND ARCHITECTURE	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To Learn basics of Sensor and Network technology
- Learn key routing protocols for sensor networks and main design issues
- Learn transport layer protocols for sensor networks, and design requirements
- Understand the medium access control protocols and address physical layer issues
- To learn the security features in WSN.

Unit 1 Introduction and Overview of Wireless Sensor Networks**9Hrs.**

Introduction, Brief Historical Survey of Sensor Networks, and Background of Sensor Network Technology, Ad-Hoc Networks, Applications of Wireless Sensor Networks: Sensor and Robots, Reconfigurable Sensor Networks, Highway Monitoring, Military Applications, Civil and Environmental Engineering Applications, Wildfire Instrumentation, Habitat Monitoring, Another Taxonomy of WSN Technology, Basic Sensor Network Architectural Elements, Home Control, Medical Applications.

Unit 2 Routing protocols for Ad Hoc wireless networks**9 Hrs.**

Designing issues, classification of routing protocols, table driven routing protocols, on demand routing protocol, Hybrid routing protocol, Hierarchical routing protocols. Multicast routing in Ad Hoc wireless networks: Operations and classification of multicast routing protocols, Tree based multicast routing protocol, Mesh based multicast routing protocol.

Unit 3 System architecture and design issues**9Hrs.**

Design Constraints for Routing in Wireless Sensor Networks, Classification of Routing Protocols in Wireless Sensor Networks-Hierarchy Role of Nodes in the Network, Data Delivery Model, Optimization Techniques for Routing in Wireless Sensor Networks, Application of the Optimization Techniques: Routing Protocols.

Unit 4 Routing Protocols for Wireless Sensor Networks**9 hrs**

Introduction, Data Dissemination and Gathering, Routing Challenges and Design Issues in Wireless Sensor Networks Network Scale and Time-Varying Characteristics, Resource Constraints, Sensor Applications Data Models, Routing Strategies in Wireless Sensor Networks: WSN Routing Techniques, Flooding and Its Variants, Sensor Protocols for Information via Negotiation, Low-Energy Adaptive Clustering Hierarchy, Power-Efficient Gathering in Sensor Information Systems, Directed Diffusion, Geographical Routing.

Unit 5 Transport layer security protocols for Ad Hoc wireless networks**9 Hrs.**

Designing issues, classification of transport layer solutions, feedback based TCP, TCP bus, Ad Hoc TCP, Security in Ad hoc wireless networks, Issues and challenges in security provisioning, Key management, Secure routing in Ad hoc wireless networks. Quality of Service: Issues and challenges in providing QoS in Ad Hoc wireless networks, classification of QoS solutions.

Max.45Hours**COURSE OUTCOMES:**

On completion of the course the student will be able to

- CO1: An Ability to understand the concepts of sensors.
- CO2: An Ability to analyse modelling and simulation of various communication networks.
- CO3: Demonstrate knowledge of MAC protocols developed for WSN.
- CO4: Demonstrate knowledge of routing protocols developed for WSN.
- CO5: Understand and explain mobile data-centric networking principles
- CO6: An Ability to understand the security features in WSN

80 marks

SITA1503	FOG AND CLOUD COMPUTING	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand the basic concepts of cloud computing and cloud enables.
- To understand cloud services and Multi-tenancy computing
- To study about various models of cloud environments and virtualization.
- To manage the cloud computing infrastructure with security.
- To gain knowledge of cloud and to understand about Fog, edge computing.

UNIT 1 UNDERSTANDING CLOUD COMPUTING**9 Hrs.**

Basic Concepts and Terminology - Cloud Computing Architectural Framework - Types of Clouds - pros and cons of cloud computing - Cloud Characteristics - difference between web 2.0 and cloud - key challenges in cloud computing - Major Cloud players - Virtualization in Cloud Computing - Parallelization in Cloud Computing - cloud resource management - Cloud Enabling Technology

UNIT 2 CLOUD SERVICE MODELS**9 Hrs**

Software as a Service (SaaS) - Infrastructure as a Service (IaaS)- Platform as a Service (PaaS)- Web services - Service Oriented Architecture (SoA) - Elastic Computing - On Demand Computing- Service Management in Cloud Computing - Multi-tenancy computing , architecture.

UNIT 3 CLOUD DEPLOYMENT MODELS and VIRTUALIZATION**9 Hrs.**

Deployment models: Public cloud - Private Cloud -Hybrid cloud - Community cloud - Need for virtualization - Types of Virtualization - Virtualization OS - VMware, KVM - System VM - Process VM - Virtual Machine Monitor - Properties - Xen, Hyper V, Virtual Box, Eucalyptus .

UNIT 4 MANAGEMENT IN CLOUD COMPUTING & SECURITY**9 Hrs.**

Cloud data centres - Energy efficiency in data centre - Data Management in Cloud Computing - Mobile cloud computing service models - Open Source and Commercial Clouds, Cloud Simulator - sensor cloud- Fundamental Cloud security - Cloud security Threads - Additional considerations - Security solutions a case study.

UNIT 5 FOG COMPUTING**9 Hrs.**

From Cloud to Fog - Fog Computing architecture - fog networks - Principles of Edge/P2P networking - Security and privacy in Fog.

Max.45Hours**Course Outcomes:**

On completion of the course, student will be able to

- CO1: Analyze the Cloud computing setup with its vulnerabilities and applications using different architectures.
 CO2: Implement and install the cloud tools to make enable the cloud computing infrastructures.
 CO3: Apply and design suitable Virtualization concept, Cloud Resource Management and collaboration services.
 CO4: Create combinatorial auctions for cloud resources and services for computing clouds Develop and make cloud services as commercial.
 CO5: Assess cloud and cloud to Fog with IoT.
 CO6: Ability to, understand fog computing architecture

80 marks

SCSA3091	SOCIETY 5.0	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To understand the society 5.0, Cyberspace and Physical Space to solve
- To Provide knowledge and overview about Bigdata, IoT and Artificial Intelligence for Society 5.0.
- To understand Augmented Reality and Virtual Reality, Next Generation Sensors
- To discuss about Challenges and Technologies towards Society 5.0, Security of Cyber Physical Systems
- Discuss to apply society 5.0 Innovation with Future Trends with Applications

UNIT I INTRODUCTION TO SOCIETY 5.0**9hrs**

Introduction -Schema of society 5.0-Characteristics of Society 5.0. Introduction to communication technologies: Artificial Intelligence - robotics - 3D Printing. People: Centric Society -Knowledge Sharing-Physical space-Cyberspace - Humanity VS Society 5.0 -Elements of Society 5.0-Data Driven to Society-Modeling real world Issues.

UNIT 2 EMERGING TECHNOLOGIES WITH SOCIETY 5.0**9hrs**

Introduction to Big Data - Issues and Challenges in the traditional systems -Intelligent Data Analysis -Big Data Storage Statistical Concepts: Sampling Distributions - Re-Sampling - Prediction Error - Random Sampling- Artificial Intelligence -Foundations of AI-Intelligent agent-Types of agents-Structure-Problems solving agents-Internet of Things- Introduction to IoT- Basic Architecture of an IoT, From M2M to IoT, M2M towards IoT-Robotics- Robot system components-Robot classification Coordinate frames-degree of freedom-dynamic stabilization of robots

UNIT III INTRODUCTION TO INDUSTRY 4.0**9hrs**

Introduction-Globalization and Emerging Issues, LEAN Production Systems, Smart and Connected Business Perspective, Cyber Physical Systems and Next Generation Sensors, Augmented Reality and Virtual Reality, Artificial Intelligence, Big Data and Advanced Analysis- An emerging industrial structure for IoT -Cyber security in Industry 4.0-Basics of Industrial IoT. Common Issues in Industry 4.0 and Society 5.0.

UNIT IV CHALLENGES AND TECHNOLOGIES TOWARDS SOCIETY 5.0**9hrs**

Overcome with Economic Development and Solution to Social Problems in Society 5.0- Security of Cyber Physical Systems -Embedded and CPS security - attacks and countermeasures, authentication, identification, confidentiality, data integrity, authorization, access control, malware attacks and counter-measures, security protocols- Social Issues in Society 5.0 - human-centered society (Society 5.0)- Sustainable Development Goals-Economic Advancement-Resolution to Social Problems.

UNIT V INNOVATION WITH FUTURE TRENDS WITH APPLICATIONS**9hrs**

Mobility-Health Care-Agriculture-Food Products-Disaster Prevention.

MAX. 45 Hours**COURSE OUTCOMES**

On completion of the course the student will be able to

- CO1:** Understand the Social Problems By A System That Highly Integrates Cyber space and Physical Space to solve
- CO2:** Get Skills for Economic Development and A Human-Centered Society That Balances Economic Advancement
- CO3:** Achieve a High Degree of Convergence Between Cyberspace(Virtual Space) And Physical Space(Real Space)
- CO4:** Use of Emerging Technologies with Society 5.0 To Achieve More Production/Avoid Loss of Productions
- CO5:** Internet and IoT, Bigdata for production lines to be adaptive, intelligent, and flexible enough to meet the updated requests.
- CO6:** Design and apply in Health Care, Agriculture, Food Products, Disaster Prevention

SCSA1706	CYBER DIGITAL TWIN	L	T	P	Credits	Total Marks
		3	0	0	3	100

COURSE OBJECTIVES

- To gain knowledge in cyber security and digital firmware.
- To identify types of digital twin and data IoT Technologies
- To make a twin modelling.
- To understand about Risk Management and Twin Constructions
- To make students aware of security concerns while implementing Cyber Digital Twin Technology

UNIT I INTRODUCTION**(9hrs)**

Introduction- Cyber Digital twin-definition-uses and benefits-need for digital twin-working principle Technology Digital thread-digital shadow-building blocks of digital twin-digital twin technology drivers and enablers.

UNIT II DATA MODELLING ENVIRONMENT**(9hrs)**

Types of digital twin-Based on Product and Process-Based on Functionality-Based on Maturity. Development considerations-Overview of Data-Modeling Environment.Modelling-model and data management-Managing data-implementing the model- Cloud and IOT technologies.

UNIT-III DIGITAL TWIN OPTIMIZATION**(9hrs)**

Cyber range vs digital twin-human behavior modeling in digital twin-optimization using digital twin-digital twin and cyber security-Techniques. Technologies-Industrial IOT and Digital Twin-simulation and digital twin-Machine learning and digital twin-virtual reality and digital twin-cloud technology and digital twin.

UNIT IV RISK MANAGEMENT**(9hrs)**

Digital twin and Risk Assessment-Digital twin reference model-Implementation-Development of risk assessment plan-Development of communication and control system-Development of digital twin tools-Integration-platform validation-Difficulties-Practical implications.

UNIT -V APPLICATIONS**(9hrs)**

Applications: Digital Twin in Manufacturing-Digital Twin in Automotive-Digital Twin in Healthcare-Digital Twin in Utilities-Digital Twin in Construction.

COURSE OUTCOMES:

On completion of the course the student will be able to

CO1: Implement fundamental Cyber System and Digital Twin Technology

CO2: Understand types and data modelling of Digital twin

CO3: Understand the optimization, simulation and validation

CO4: Know about the risk and Control development

CO5: Understand the application in different fields

CO6: Develop applications using Cyber digital Twin Technologies
