1.3.3 Value Added Courses offered during the academic year 2023-2024

Sl. No.	Name of the value added courses offered	Duration of course	Number of students enrolled
1	Rhino	30 Hours	47
2	Autodesk Autocad	75 Hours	35
3	Autodesk Revit	75 Hours	35

1. Rhino - Value Added Course on PARAMETRIC DESIGNS

The Rhino Value Added Course was organized to work on the parametric design as part of the Design studio VI for the batch 2021-2026. Introduction to Rhino software and the development of existing serpentine pavilions are worked out as exercises for the students understanding of the tools and practice in the software. The session continued with the design and development of a seating structure to highlight on the importance of the software and parametric design approach for the output on the dimensions and construction details of the products for its fabrication. Grasshopper scripts are introduced for the design and development of the different kind of parametric designs. Installation of elk for the development of 2d and 3 D maps of various location and output as AutoCAD drawings. Energy simulations are worked out with the ladybug and honeybee plug ins. Students understood on the radiation effects on the buildings and created various parametric design approaches for their facades and massing of the buildings. The workshop outputs are presented in the university viva of their design studio project of mixed use building.

The School of Building and Environment, Sathyabama Institute of Science & Technology is offering a Value Added Course on

RHINO & GRASSHOPPER SOFTWARE TOOLS

during the month of March 2024

by Ar. Trinadh P, Ekam BIM Studios

MODULE 1 - Introduction to Rhino & grasshopper Tools

MODULE 2 - Parametric Design

MODULE 3 - Climate Analysis 1

MODULE 4 - Climate Analysis 2

MODULE 5 - Building Analysis

Ar. Trinadh P

10-week schedule for an Autodesk AutoCAD course

SATHYABAMA INSTITUTE OF SCIENCE AND TECHNOLOGY

SCHOOL OF BUILDING AND ENVIRONMENT

DEPARTMENT OF ARCHITECTURE

BATCH -2023-2028

Week 1: Introduction to AutoCAD and User Interface

- Overview of AutoCAD and its applications
- Introduction to the user interface and workspace
- Understanding toolbars, menus, and panels
- Basic navigation (zoom, pan)
- **Assignment:** Practice navigating the interface and familiarizing with key commands

Week 2: Basic Drawing Tools

- Introduction to coordinate systems (absolute, relative, polar)
- Basic drawing tools: line, circle, rectangle, polyline
- Using the "Undo" and "Redo" functions
- **Exercise:** Create simple shapes and practice using coordinate systems

Week 3: Modifying Commands and Object Selection

- Object selection techniques (window, crossing)
- Modify tools: move, copy, rotate, mirror, scale
- Introduction to layers and layer management
- **Assignment:** Create and modify a basic floor plan layout using modify commands

Week 4: Precision Tools

- Using Osnap (Object Snap) settings for precision
- Drawing aids: Ortho, Grid, Snap, Polar Tracking
- Working with coordinates for accuracy
- **Exercise:** Practice drawing a more complex geometric design with precision tools

Week 5: Layers and Properties

- Detailed use of layers for organizing drawings
- Changing object properties (color, line type, line weight)
- Layer management (locking, freezing, isolating)

- **Assignment:** Create a structured drawing using multiple layers

Week 6: Annotation and Text

- Adding text to drawings
- Using text styles and managing annotations
- Dimensioning basics: linear, aligned, angular, and radius dimensions
- **Exercise:** Annotate and dimension a technical drawing

Week 7: Blocks and Attributes

- Creating and using blocks for repetitive elements
- Defining and modifying attributes within blocks
- Editing blocks using the Block Editor
- **Assignment:** Create a floor plan using blocks for furniture and fixtures

Week 8: Hatching and Gradients

- Applying hatch patterns and solid fills
- Controlling hatch properties (scale, angle, layer)
- Editing hatch boundaries
- **Exercise:** Add hatch patterns to a floor plan or section drawing

Week 9: Layouts and Printing

- Setting up paper space and model space
- Creating viewports and adjusting scale
- Printing and plotting basics, including setting up sheet size and print styles
- **Assignment:** Set up and print a simple layout with title block and viewport

Week 10: Project Work and Review

- Review of all key concepts covered in the course
- Individual or group project to design a simple architectural layout or mechanical part
- **Final Assignment:** Present and submit the project for feedback

3. Autodesk Revit – Value Added Course

The Autodesk REVIT Value Added Course was organized to work on the Architectural design as part of the Design studio VI for the batch 2022-2027.

The workshop attendees list

S. No.	Reg. Number	Student Name
1	42210001	ABINAYA. G
2	42210002	ADELINE RENISHA. R. L
3	42210003	AMEENA FIRDOUSE. M

10-week schedule for an Autodesk Revit course

SATHYABAMA INSTITUTE OF SCIENCE AND TECHNOLOGY

SCHOOL OF BUILDING AND ENVIRONMENT

DEPARTMENT OF ARCHITECTURE

BATCH -2023-2028

Week 1: Introduction to Autodesk Revit and User Interface

- Overview of Revit for architecture and BIM (Building Information Modeling)
- Setting up Revit environment, templates, and project organization
- Navigating the user interface: Ribbon, Quick Access Toolbar, Project Browser, Properties panel
- Basic tools: Select, Move, Copy, Rotate, Scale
- Practical Exercise: Creating a simple floor plan

Week 2: Basic Building Elements – Walls, Floors, and Roofs

- Creating and modifying walls: Wall types, alignment, and materials
- Placing floors and floor types
- Adding roofs: Types of roofs, creating slopes, modifying roofs
- Working with constraints and dimensions
- Practical Exercise: Designing a basic building layout with walls, floors, and roof

Week 3: Working with Doors, Windows, and Openings

- Inserting doors and windows
- Editing and customizing door and window families
- Working with wall openings, curtain walls, and storefronts
- Practical Exercise: Adding doors, windows, and curtain walls to the building model

Week 4: Levels, Grids, and Structural Elements

- Setting up levels and grids for the project
- Managing and modifying structural elements: Columns, beams, and framing
- Practical Exercise: Setting levels and grids for a multi-story structure, adding columns and beams

Week 5: Stairs, Ramps, and Railings

- Creating stairs: Stair types, modifying stair properties
- Designing ramps and understanding accessibility requirements
- Adding railings: Types of railings, customizing railing families
- Practical Exercise: Creating stairs, ramps, and railings within the building

Week 6: Annotation and Detailing

- Adding dimensions, text, and symbols to drawings
- Working with tags and keynotes
- Detail lines and components
- Practical Exercise: Adding dimensions, text annotations, and detailing to enhance clarity

Week 7: Rooms, Areas, and Space Planning

- Creating and managing rooms: Room tags and room schedules
- Area calculations and area plans
- Practical Exercise: Defining rooms and creating a basic room schedule

Week 8: View Management and Visualization

- Setting up different views: Plan views, section views, elevation views, 3D views
- Understanding visibility and graphic overrides
- Introduction to rendering basics and setting up camera views
- Practical Exercise: Creating various views and applying basic rendering settings

Week 9: Sheets, Printing, and Documentation

- Setting up sheets for presentation and documentation
- Adding views to sheets and managing layout
- Title blocks, legends, and keynotes
- Practical Exercise: Creating a sheet set for documentation and presentation

Week 10: Schedules, Export, and Final Project Presentation

- Creating and customizing schedules: Door, window, and room schedules
- Exporting files for collaboration (DWG, IFC, PDF)
- Reviewing and finalizing the project for presentation
- Final Project: Complete building model with schedules, sheets, and views for presentation

Additional Recommendations:

- **Assignments:** Weekly assignments based on practical exercises for hands-on learning.
- **Assessments:** Quizzes and project assessments in Weeks 5 and 10 for progress tracking.
- **Project work:** Encourage students to develop a portfolio-ready project by the end of the course.
