VALUE ADDED COURSES FOR IMPARTING TRANSFERABLE AND
LIFE SKILLS OFFERED DURING 2022 – 2023

S. No	TITLE	DATE OF THE EVENT	NO. OF STUDENTS ENROLLED	NO. OF STUDENTS COMPLETED	PAGE NO
1	NGS Data Analytics	11.07.2022 TO 29.07.2022	23	23	3
2	Computational Chemistry	07.09.2022 TO 30.09.2022	23	23	8
3	Introduction to Mathematics for Computational Biology	15.11.2022 TO 30.11.2022	54	54	14

School of Bio and Chemical Engineering
Department of Bioinformatics

Date: June 15, 2022

DEPARTMENT CIRCULAR

Ref No: SIST / Bioinfo / Even - sem / VAC / June 15, 2022

Dear students,

We are pleased to inform you that the following courses are being offered to students under the value-added certificate courses category for this academic year. Students belonging to the I year to the III of B. Sc and I and II year of M. Sc are welcome to enroll in these courses. The duration of every course is 30 hours. On completion of the course, you will obtain a certificate of accomplishment.

S. No	Name of the course	Faculty Coordinator
1	NGS Data Analytics - Workshop (July 11 - July 29th 2022)	Dr. Swetha Sunkar
2	Computational Chemistry - A workshop (Sep 7 – Sep 30 2022)	Dr. Jemmy Christy
3	Introduction to Mathematics for Computational Biology (Nov 15 – Nov 30, 2022)	Dr. Kirubashankar

Venue

Biocomputing Lab, Department of Bioinformatics.

The last date for enrollment is - Closes 07 days before the start of each course.

Head of the Department

23.	40738023	SUTHARSANAN.S

NGS Data Analytics – Workshop
(July 11 - July 29th 2022)

Days	Date	Topics Covered	Faculty-In-Charge
1-2	11-7-2023 to 12-7-2023	Introduction to Unix/Linux & running workflows	Dr. Alex Anand
3-4	13-7-2023 to 14-7-2023	Introduction to NGS Technologies	Dr. Swetha Sunkar
5-6	15-7-2023 to 18-7-2023	NGS data pre-processing and QC	Dr. Jemmy Christy
7-8	19-7-2023 to 21-7-2023	Alignment to reference sequences	Dr. Jemmy Christy
9-10	22-7-2023 to 25-7-2023	Variant calling and annotation	Dr. Alex Anand
11-12	26-7-2023	ChIPSeq	Dr. Swetha Sunkar
13-14	27-7-2023	RNASeq	Dr. Jemmy Christy
15-16	28-7-2023 to 29-7-2023	Genome assembly	Dr. Alex Anand

Next Generation Sequencing Workshop – Objective and outcomes

- Next-generation sequencing (NGS) technologies are now a crucial component of practically all life sciences research and diagnostics.
- NGS data are often processed by qualified bioinformaticians because to their volume and, more importantly, complexity.
- This is also a serious issue for experienced professionals in life sciences who have never studied NGS because it is too new and must suddenly adapt to completely new tools, workflows, and scientific terminology, not to analyse NGS data themselves (after all, that is why we have bioinformaticians), but to ask the right questions and understand the results.
- Our session will teach you the fundamentals of NGS data processing.
- Its purpose is to teach students how to perform the fundamental processes of NGS data analysis, such as raw data manipulation, quality control, and the elimination of low-quality sequences, sequence adapters, artefacts, or other contamination. The end result should be complete mastery of the process, with the output being a set of high-quality data that can be used for further analysis.
- You will become acquainted with numerous NGS data formats, learn about the specific benefits and drawbacks of sequencing technologies and how to cope with them, and gain an understanding of the history of individual techniques used to change NGS data. You will not become a bioinformatician after this three-day training, but you will be well on your way to being a qualified partner for bioinformaticists on your team.

Computational Chemistry – Objective and outcomes

The phrase theoretical chemistry can be described as a mathematical representation of chemistry, whereas computational chemistry is typically used when a mathematical approach has been sufficiently developed to be automated for computer execution. Chemists, physicists, and mathematicians work together to create algorithms and computer systems that anticipate atomic and molecular characteristics and reaction routes for chemical reactions. In contrast, computational chemists may simply apply existing computer tools and approaches to specific chemical problems.

Computational chemistry is divided into two parts:

- Computational investigations, which are used to determine a starting point for a laboratory synthesis or to help comprehend experimental data, such as the position and source of spectroscopic peaks.
- Computational studies, which are used to forecast the potential of previously unknown compounds or to investigate reaction mechanisms that are not easily examined through experiments.

Thus, computational chemistry can either assist or challenge experimental chemists to discover whole new chemical objects.

Within computational chemistry, many important fields can be distinguished:

- The prediction of a molecule's molecular structure using force simulation or more accurate quantum chemistry methods to discover stationary points on the energy surface as the position of the nucleus is altered.
- storing and searching for chemical entity data (see chemical databases).
- Recognizing relationships between chemical structures and properties (see quantitative structure-property relationship (QSPR) and quantitative structure-activity relationship (QSAR)).
- Computational techniques to aid in chemical synthesis efficiency.
- Computational approaches to designing compounds that interact with other molecules in certain ways (e.g. drug design and catalysis).

Introduction to Mathematics for Computational Biology

Course Coordinator - (Nov 15 – Nov 30)
Course coordinator - Dr. Kirubashankar

Workshop – Day wise schedule

(Sessions will be 2 hours each that will include initial theory followed by hands – on components)

Date	Topic
Nov 15, 2022	Early history and recent Growth
Nov 16, 2022	Abstract relational biology
Nov 17, 2022	Algebraic biology
Nov 18, 2022	Complex systems biology
Nov 20, 2022	Computer models and automata theory
Nov 21, 2022	Modeling cell and molecular biology
Nov 22, 2022	Modelling physiological systems
Nov 23, 2022	Computational neuroscience
Nov 24, 2022	Evolutionary biology
Nov 25, 2022	Mathematical biophysics
Nov 27, 2022	Mathematical methods
Nov 28, 2022	Model example: the cell cycle
Nov 29, 2022	Mathematical and theoretical Biology
Nov 30, 2022	Research groups and Thrust areas in India and abroad

**Lecture / Hands on Workshop on Introduction to
Mathematics for Computational Biology - Objective and outcomes**

- Students should have knowledge of and an understanding of a variety of advanced mathematical techniques and how they apply to biological systems by the end of the course. They should also understand the basic ideas underlying some mathematical techniques that can be used to comprehend biological systems.
- Quantitative approaches are widely considered to be helpful in addressing biological concerns at both the macro (population, community, ecosystem) and tiny (chemical and chromosomal) scales. It may be argued that these attempts have resulted in intriguing mathematical, statistical, and quantitative developments. However, the biological and mathematical communities have not fully benefited from one another at dimensions greater than DNA but smaller than populations.
- This failure is particularly striking from a systems or integrative biology perspective. The main focus of systems biology is on how biological elements interact to produce adaptive behaviour at a higher level of integration. We use a broad definition of systems biology to include topics like the dynamics of intracellular genetic and protein networks during development, the incorporation of tissue responses to create dynamic homeostasis at the organism level, the emergence of higher cognitive function from neural networks, and the organisation of social systems by the movement and interaction of individual organisms. It is obvious that improvements in mathematical, statistical, computational, and engineering analysis can help with such challenges.
- A number of scientific advances in fields like genomics, bioinformatics, and environmental biology that have largely embraced quantitative methodology have led to complementary motivations for improving the mathematical and computational aspects of systems biology. It therefore seems natural to look into what opportunities are similar in systems biology and what critical issues need to be resolved to achieve these opportunities. If systems biology does not adopt these analytical techniques, funding opportunities will be reduced due to the increased successful emphasis on mathematical and computational approaches in rival areas like medicine, genomics, and proteomics. If we don't take advantage of developments in the computational and mathematical sciences, we can also miss a chance to gain a greater knowledge of integrated living systems.
