TITLE OF THE STUDY:

Patient's attitude and response to dental scaling by BDS students – A Questionnaire Survey

TYPE OF STUDY: Questionnaire Survey

NAME AND DESIGNATION OF THE PRINCIPAL INVESTIGATOR:

Dr. Sumathi. H. Rao

Professor & Head, Department of Periodontics, Sathyabama Dental College & Hospital, Chennai

NAME AND DESIGNATION OF THE CO- INVESTIGATORS:

1. Akshaya Lakshmi P

CRRI, Sathyabama Dental College & Hospital, Chennai

DEPARTMENT WHERE THE PROJECT IS BEING CARRIED OUT:

Department of Periodontics and Implantology, Sathyabama Dental college and Hospital, Chennai 600119

PROJECT DURATION:

One year from the time of approval of the topic by the ethical committee of Sathyabama Dental College and Hospital, Chennai.

AIM OF THE STUDY

1. To assess Patients' attitude towards hand scaling on being treated by BDS students.
2. To investigate the incidence of hypersensitivity among patients pre- and post- Hand Scaling.

INTRODUCTION:

Satisfaction with dental care is an important topic of dental research as it is believed to be the primary factor for patients when they seek treatment. Patients who are satisfied with any clinical procedure are usually the patient who will come back for treatment, which directly affects the continuity of care for the patient and increase the trust between the patient and their dental care provider. One of the most common treatment procedure in the field of periodontics is scaling.

Scaling is a process that cleans the surface of teeth of diseased deposits like calculus, plaque and stains which if not eliminated contributes to gingival diseases and loosening which in turn causes pyorrhea and ultimately leads to periodontal conditions. The complaints faced during scaling includes dentin hypersensitivity, gingival bleeding, tooth pain, abrasion of the cervical area of tooth.

Dentin hypersensitivity (DH) is characterized by an acute, transient pain from an area of exposed dentin in response to stimuli that cannot be attributed to any other form of defect or disease. DH is considered by many patients as a consequence of Scaling and not as the result of the pathological process due to deposits on the teeth. Patients have reported that they felt that hand scaling especially “stripped” their teeth and caused sensitivity. Few patients also feel afraid of being treated by students even when they are aware that the institution has a teaching program associated with it. These misconceptions have led to many patients not accepting hand scaling or avoiding scaling, and dental treatment as a whole.

This study aims at identifying the prevalent opinion among patients about acceptance of, and attitude towards hand scaling, being treated by students and opinion about tooth sensitivity before and after scaling.

STUDY DESIGN:

Cross-sectional, Descriptive Questionnaire Study

OBJECTIVE OF THE STUDY

1. Patients' attitude towards hand scaling
2. Patients' attitude towards Hand Scaling done by BDS students
3. Overall assessment of treatment done by BDS students
4. Patients' opinion about tooth sensitivity pre- and post- scaling
5. Patients' preference vis-à-vis Hand and Ultrasonic Scaling

INCLUSION CRITERIA

1. Patients willing to participate
2. Age group: 18-60
3. Patients having at least 24 teeth
4. Patients who have not undergone any major dental surgery in the past 6 months

EXCLUSION CRITERIA

1. Patients not willing to participate in the study
2. Medically Compromised patients
3. Pregnant patients
4. Patients with any type of disability that can affect consent
5. Patients who have undergone any Periodontal Surgery in the past 6 months

METHODOLOGY:

- Patients will be given a questionnaire and will be asked to fill a questionnaire of 20 questions.
- Identifying details of participants will not be collected for confidentiality reasons.
- Questions will be in English and Tamil and consist of both open- and closed-ended options.
- Questionnaire has not been validated by experts yet.

STATISTICS:

Responses will be tabulated in Microsoft Excel and analyzed using SPSS software using appropriate statistics.

A sample size of 423 was derived, based on a confidence level of 90%.
