ADMINISTRATIVE ORDER

- Subject:** Project entitled "Prediction and Analysis of Mesoscale Thunderstorm in India – A Computational Approach".
- PI:** **Dr. P. Sardar Maran**, Department of Computer Science & Engineering, Sathyabama Institute of Science and Technology Jeppiar Nagar, Rajiv Gandhi Road Chennai, Tamil Nadu- 600119
- Co-PI:** **Dr. B. Prabhu Dass Batvari**, Centre for Earth & Atmospheric Sciences, Sathyabama Institute of Science and Technology Jeppiar Nagar, Rajiv Gandhi Road Chennai, Tamil Nadu- 600119
- Co-PI:** **Dr. L. Lakshmanan**, Department of Computer Science & Engineering, Sathyabama Institute of Science and Technology Jeppiar Nagar, Rajiv Gandhi Road Chennai, Tamil Nadu- 600119

Sanction of the Competent authority is hereby conveyed under Rule 18 of the Delegation of Financial Power Rules 1978 for implementation of the above-mentioned project at an estimated cost of **Rs. 20,73,280/- (Rupees twenty lakhs seventy three thousand and two hundred eighty only)** Sathyabama Institute of Science and Technology for a period of three years (2022-23 to 2024-25).

2.0 Objectives:

- Understand the genesis, development and propagation of severe Thunderstorms over Tamil Nadu.
- To develop Mesoscale Thunderstorm prediction model with various computational methods and techniques.
- Evaluate the performance of computational models for the thunderstorm prediction over Tamil nadu and find out suitable model

.2.1 Programme:

In general, climate prediction is highly non-linear phenomena in nature. The parameters that are required to predict the thunderstorms are enormously complex and the prediction using all these parameters is enormous even for a short period. Soft computing is an innovative approach to construct computationally intelligent systems that are supposed to possess humanlike expertise within a specific domain, adapt themselves and learn to do better in changing environments, and explain how they make decisions. In that manner ANFIS processing is a good solution from radar images to predict the accurate models. I have gone through many literatures, this hybrid technology of both NWP and Doppler images data cannot be used anywhere also the anti noise reduction technique is a new era before prediction of thunderstorm using Doppler images.

The prediction model will able to ingest Doppler radar, Satellite data using various soft computing tools and techniques (ANFIS, Machine language, 2nd Generation wavelet neural network and Image processing). The proposed mesoscale thunderstorm model will identify when and where the severe thunderstorm will occur in. This alert will be of much use to the society to save life and property.

Dear Sir/Ma'am,

Greetings from the **National Skill Development Corporation (NSDC), New Delhi.**

The Ministry of Skill Development & Entrepreneurship (MSDE), Govt. of India, is implementing the flagship skill development scheme of Government of India - Pradhan Mantri Kaushal Vikas Yojana 4.0 (PMKVY 4.0).

With the roll-out of the National Education Policy (NEP) in 2020, there has been a renewed focus on vocational skill training imparted by schools and higher education institutes, thus integrating mainstream academics with practical vocational skill training.

NSDC had circulated an online form to aggregate demand, and your institution has expressed interest to participate in PMKVY 4.0. Accordingly, your school, Sathyabama Institute of Science and Technology has been allocated 240 targets for implementing training under PMKVY4.0.

We are starting handholding initiatives through capacity building workshops in parallel for the benefit of all participants. A schedule of such workshops shall be shared with you upon receiving your willingness and Job Role wise demand. Some key highlights in terms of scheme contours, course offerings, etc. is shared below for your ready reference. You may like to write to [@Karthik Nair](#) for any queries.

Regards,

PMKVY 4.0 Target Allocation Team.

Brief Note on PMKVY 4.0

- c. Process overhauling of the skill ecosystem by leveraging technology, innovative financing, and digitalization.

2. Implementation through Skill Hubs:

Skill Hubs can be setup in State and Central Government Schools, Higher Educations Institutes (HEIs), Colleges, and Universities (including Skill Universities) with requisite infrastructure for providing Short Term Trainings under PMKVY 4.0. The information on Skill Hub is available on www.pmkvyofficial.org.

3. Selection of Job Role for Training:

Dear FRACTION partner

This news kicks off the final financial settlement process for the Fraction project.

In the first stage of this process, we are gathering information about the staff involved in the project. All we are asking for now is the names of the university staff who participated in the activities (list of activities and workload in attached file) and the names of the people who took part in the project trips (name, destination and dates of departure and return). This comes down to filling in the two tables provided in attachment. Once this information has been submitted, documents will be prepared for signature.

Universities that have not provided invoices confirming the purchase of equipment (if it took place by 30 September) are asked to send scans immediately. Failure to send scans will make it impossible to account for these amounts.

In the second stage, you will be asked to sign the prepared documents (we are going to prepare documents and send it ready to sign). Once the scans have been collected, we will move on to determining the financial flows.

The financial settlement will take into account all the operations performed so far - including unsuccessful transfers (if any). Any transfers of funds will be carried out until the funds are exhausted (the coordinator has 90% of the budget). The remaining 10% can only be accounted for once the final report has been accepted. This is what the contract with the EACEA states.

Your sincerely

Mariusz Mazurkiewicz

Schedule A

Title: Competency Assessment of In-Service Community Health Officers in Public Primary Health Care Setting in Odisha

Scope of Work

Introduction:

Providers' competence plays a significant role in primary health care performance (Michielsen et al., 2022). Community Health Officers (CHOs) in Health and Wellness Centres are one of the key members of the Primary Health Care team (Brar et al., 2021). They are new cadres of primary health care professionals, introduced by the Odisha state government. They are appointed in the modified sub-centres (HWCs) which cover 3000 population. Globally, including in Low- and middle-income countries (LMICs), the roles of primary health care nurses are becoming vital. The CHOs support primary health care to meet the elevated service needs caused due to the increasing burden of Chronic Care (Garg et al., 2022). Global, including Indian literature, suggests that the competency of the Primary Health Care team needs substantial capacitation to perform optimally (Baviskar et al., 2021). To explore it further in Odisha, the Harvard School of Public has assessed the competencies of the primary health care team (Yip et al., 2022). It entails that- only 40% of providers were able to diagnose tuberculosis (TB) correctly.

In contrast, the correct diagnostic ability was 54% for pre-eclampsia, 55% for asthma, 67% for heart attack, and 72% for diarrhoea. Doctors practicing in rural areas performed better than those in urban areas. Private providers showed better competence in diagnosing most diseases except for TB. In most cases, the condition was misdiagnosed as a milder illness. Most providers could not prescribe the right treatment recommended by STGs or correctly refer patients to higher facilities when required. This survey reported high referrals from PHCs and SCs to the higher centres for complex cases. However, the back referrals were very few, indicating inefficiencies in the health system's functioning. Out of the total PHCs, 56% refer to CHCs, 28% to sub-centers, and 10% to district hospitals.

*Our vision is that all people,
no matter where they live,
no matter what their age,
have the right to access high
quality and affordable
healthcare and to lead healthy
and productive lives*

Regarding the referral network among the public hospitals (including the CHCs) and private hospitals, 87% refer patients to public hospitals, while 7% to other private hospitals. In other cases, most public hospitals refer their patients to other public hospitals. These findings indicate that the level of competencies among the primary health care team is low, but the existing studies cannot quantify the level of competencies among in-service primary health care team.

Understanding this competency gap among primary health care teams, HSTP proposed to the Government of Odisha to develop the Primary Health Care team competency including Community Health Officers in Health and Wellness Centres. Competency Assessment is the first step towards developing competency. For which, HSTP intends to partner with Sathyabama College of Nursing, Sathyabama Institute of Science and Technology (SCN-SIST), Chennai to assess the competency of in-service CHO in public primary health care setting in Odisha.

The State Research & Ethics Committee, Directorate of Health Services, the Government of Odisha has approved the collaborative proposal to develop the Competency Assessment Framework (Competency Assessment Tool) on 23rd March 2023.

The objective of this proposed study is to assess the level of competencies among in-service CHOs in HWCs in Odisha and to develop the CHOs' competency-based training manuals for Participants and trainers.

*Our vision is that all people,
no matter where they live,

Title of the proposed research project Genotypic Diversity of Microbial flora in OXIS contacts of Primary Molars - A preliminary exploratory study

Summary (up to 250 words):

A structured summary should contain the following subheadings: Rationale/ gaps in existing knowledge, Novelty, Objectives, Methods, and Expected outcome.

Rationale Early childhood Caries (ECC) is a multi-factorial disease and has increased manifold in the recent years. Numerous risk factors are associated with ECC. Literature in the recent past has confirmed the risk of anatomic variation among the OXIS contacts of primary molars. To justify this multi- factorial nature of ECC, microbial factors need to be assessed in every anatomic variation of the contact areas of primary molars. Novelty This is the first such study to evaluate the microbial profile of OXIS contacts in primary molars. Site specific microbial profiling is necessary either to enhance the understanding of existing etiology of ECC or bring about a shift in assessing the risk factors of ECC. The outcomes of this project might pave way for antimicrobial interventions for prevention of early childhood caries. The results Objectives The primary objective of the study are to evaluate the microbial profile(genotypic diversity) of OXIS contacts of primary molars in children with and without ECC. The secondary objective is to compare the microbial profiles among O, X, I, S contacts. Methods Genotypic diversity will be studied by processing the collected plaque samples through a next generation sequencing method called Metagenomics. Bio informatics will be used to analyze the data and extrapolate the results. Expected Outcome From this project, we propose to provide a preliminary evidence of genotypic diversity of the most vulnerable anatomic sites to ECC. This could bring a paradigm shift in understanding the etiology, developing preventive strategies and accelerate the personalized approach for prevention of ECC, which is a global concern.

Priority Area: Non-Communicable Diseases

Priority Area diseases: Oral health

Area of Research

Descriptive

Keywords Six keywords separated by comma which best describe your project may be provided.

Early childhood caries, OXIS, Primary molars, microbiota, contact areas, Metagenomics, genotypic diversity

Abbreviations Only standard abbreviations should be used in the text. List of abbreviations maximum of ten may be given as a list.

ECC- Early Childhood Caries DNA- Deoxy Ribonucleic acid MG-RAST- Metagenomics - Rapid Annotation using Subsystems Technology ORF- Open Reading Frame CTAB- Cetyltrimethyl ammonium bromide RNA- Ribonucleic acid KEGG - Kyoto Encyclopedia of Genes and Genomes

Problem Statement (up to 500 words):

State the currently available information to present the problem adequately.

The oral cavity is heavily colonized by >700 species of microorganisms (Aas JA et al, 2015). Early childhood Caries (ECC) is a multi-factorial disease and has increased manifold in the recent years. The principal factor that initiates the caries process along with the dietary factor are the microbes. The most common anatomic sites for caries susceptibility are the pits and fissures and contact areas. Essentially, the broader proximal contact areas observed in primary teeth are likely to increase caries susceptibility, since the self-cleansing action would be reduced because of the limited movement, leading to greater plaque accumulation (Kennedy et al, 1986, Gohil et al, 1973, Sarig et al, 2015). Both prospective and retrospective cohort studies have provided compelling evidence that variations in interproximal contacts is a major risk factor in occurrence of Early childhood caries. However, the microbial diversity in the OXIS contacts needs to be described.

Rationale of the study (up to 250 words)

Mention how the research question addresses the critical barrier(s) in scientific knowledge, technical capability, and/or programmatic/clinical/lab practice and its relevance to local, national and international context with relevant bibliography.

Morphology of approximal surfaces in primary molar teeth, in particular both surfaces being concave, significantly influences the risk of developing caries (Cortes, 2018). The types of interproximal contact areas of primary molars were first described in a cross-sectional study (2018), which reported four different types of contact areas: open (O); point (X); straight (I); and curved (S) (Muthu MS et al 2021). Among the OXIS contacts, the S type was most susceptible to approximal caries due to its complex morphology followed by the I,X and O contacts which was confirmed in a prospective cohort study conducted on preschoolers of 3- 4 years of age (Muthu MS et al 2021, Kirthiga M et al 2023). However, the reason for S type being vulnerable could be the variation in the microbial profile in these contact areas. Therefore, there is a need to isolate and describe the genotypic diversity of the microorganisms in OXIS contacts with specific and sensitive newer technologies. With the establishment of new technologies, such as next generation sequencing (NGS) and machine learning algorithms, it has provided a unique opportunity to an enhanced understanding of the role of oral microbes (bacteria, fungi, and viruses) on caries development and progression (de Jesus VC et al, 2021).

Hypothesis/ Research question (up to 100 words):

Please provide details

Despite the wealth of studies on ECC and caries, the ecological aspects of the disease are still not fully understood (O'Connell LM et al, 2020). Therefore, studying caries with site-specific biofilm samples is essential (Fejerskov et al 2008, Gnat et al 2017). Null hypothesis tested in this study is that there is no difference in the genotypic diversity of microbial profile among the various contact areas of primary molars namely, O, X, I and S. This will aid in weighing the risk of anatomic variation against the microbial factors, thus help in understanding the caries susceptibility of an individual. The aim of the study is to evaluate and compare the microbial profile of the contact areas in primary molars of healthy children and children with Early childhood caries.

Study Objectives (up to 25 words/ objective)

Define the objectives clearly and in measurable terms; mention as primary and secondary objectives, if necessary. Do not include more than 3-4 objectives.

To identify the microbial profile of OXIS contacts of primary molars in children with and without Early Childhood Caries.
To correlate microbial profile with OXIS contacts in children with and without Early Childhood Caries.

Sanction of the Competent authority is hereby conveyed under Rule 18 of the Delegation of Financial Power Rules 1978 for implementation of the above-mentioned project at an estimated cost of **Rs. 20,73,280/- (Rupees twenty lakhs seventy three thousand and two hundred eighty only)** Sathyabama Institute of Science and Technology for a period of three years (2022-23 to 2024-25).

2.0 Objectives:

- Understand the genesis, development and propagation of severe Thunderstorms over Tamil Nadu.
- To develop Mesoscale Thunderstorm prediction model with various computational methods and techniques.
- Evaluate the performance of computational models for the thunderstorm prediction over Tamil Nadu and find out suitable model

2.1 Programme:

In general, climate prediction is highly non-linear phenomena in nature. The parameters that are required to predict the thunderstorms are enormously complex and the prediction using all these parameters is enormous even for a short period. Soft computing is an innovative approach to construct computationally intelligent systems that are supposed to possess humanlike expertise within a specific domain, adapt themselves and learn to do better in changing environments, and explain how they make decisions. In that manner ANFIS processing is a good solution from radar images to predict the accurate models. I have gone through many literatures, this hybrid technology of both NWP and Doppler images data cannot be used anywhere also the anti noise reduction technique is a new era before prediction of thunderstorm using Doppler images.

The prediction model will able to ingest Doppler radar, Satellite data using various soft computing tools and techniques (ANFIS, Machine language, 2nd Generation wavelet neural network and Image processing). The proposed mesoscale thunderstorm model will identify when and where the severe thunderstorm will occur in. This alert will be of much use to the society to save life and property.

Dear Dr. Manjunath Kamath S.,

Greetings from FICCI.

It gives me pleasure to inform you that Mr. Djimenan Boilengar from Chad has been selected for the award of 'C V Raman International Fellowship for African Researchers' under Visiting Fellowship for which you have graciously consented to be the host scientist in India. The final award to the candidate is, however, subject to fulfillment of acceptance criteria as required by DST and the host institution.

The selected African researchers are required to comply with requirements as indicated in the Annexure to this letter.

Further, as FICCI would be transferring the fellowship amount to the host institute, may I request you to send the fund transfer details (i.e. name of beneficiary/bank account, bank name and branch) along with name and details of the contact person. The host institute would be required to obtain original bills/invoices for procurement made by the fellow against contingency allocation (details given in brochure) and submit the same to FICCI along with utilization certificate (duly signed by competent authority) for the entire fellowship grant and technical progress report after completion of fellowship tenure.

We would like to extend our sincere gratitude for your kind support to 'C V Raman International Fellowship for African Researchers' program by accepting to be a host scientist. We value your partnership and believe that your support is critical for successful implementation of this ambitious program launched by Government of India. We are sure that it will help in building contacts and linkages with African researchers and at the same time serve as a goodwill building measure. We look forward to your continued support for the program in upcoming years.
