Department of Mechatronics Engineering

School of Mechanical Engineering

Minutes of Board of Studies Meeting held on 04-06-2022 (Saturday)

Meet Time: 9.45 a.m. to 11.45 noon

The meeting started with the welcome address delivered by Dr. S. Prakash, Professor and Dean (Session Chair). He introduced the new course and the revised courses offered to Mechatronics Engineering students to the BOS panel members. The following are the BOS members were present during the Mechatronics Engineering BOS meeting.

Sl. No.	Name	Designation	Institution	Role
1	Dr. S. Prakash	Professor and Dean	Sathyabama Institute of Science & Technology	Chair person
2	Dr.L.Vijayaraghavan	Professor	IIT Madras, Chennai	BoS Member (External)
3	Dr.N.GaneshKumar	Associate Professor	PSG Tech, Coimbatore	BoS Member (External)
4	Dr. B. Kanimozhi	Professor	Sathyabama Institute of Science & Technology	Member
5	Dr. S. Sivasaravanan	Associate Professor	Sathyabama Institute of Science & Technology	Member
6	Dr. M Sangeetha	Associate Professor	Sathyabama Institute of Science & Technology	Member
7	Dr. J. R. Deepak	Associate Professor	Sathyabama Institute of Science & Technology	Member
8	Dr.J. Lilly Mercy	Assistant Professor	Sathyabama Institute of Science & Technology	Member
9	Mr. V. Jayaprakash	Assistant Professor	Sathyabama Institute of Science & Technology	Member
10	Mr. J. Senthil Kumar	Assistant Professor	Sathyabama Institute of Science & Technology	Member
11	Mr. M Vigneshwar	Students	Sathyabama Institute of Science & Technology	Student Member
12	Mr Aman Dinodya	Students	Sathyabama Institute of Science & Technology	Student Member

- Dr. S. Prakash proposed a new course entitled **SMEA3005 - Non-Destructive Testing and Techniques (Theory Course)** based on the current industrial requirements. Learning this course helps the students to improve the skill in the field of NDT and Quality Inspection. On learning this course students will be able to work with various NDT technologies like Radiography, Thermography, Ultrasonic Methods etc. which can be applied for various industrial applications. More over students will be able to develop new hybrid NDT Technologies for detecting various defects and for quality inspection in industries. On learning the course curriculum, the student will also be able to choose the correct NDT method for inspecting various components.

- Dr. J. R. Deepak proposed the revised theory course entitled **SMRA1701 - Robotics and Machine Vision System (Theory Course) 2019 regulation** from **SMR1401 - Robotics and Machine Vision System (Theory Course)** from the **2018 regulation** based on the futuristic requirements for the students in the field of Robotics and Automation. The course curriculum enables the student to select the appropriate end effector, actuator, driver for various industrial process and loading applications.
- **SMRA2701 - Robotics and CAM Lab (Practical Course) 2019 regulation** was also revised and proposed from **SPR4054 - CAD / CAM Lab and SMR4052 - Robotics Lab (Practical Course) 2018 regulation** by Dr. M. Sangeetha based on the futuristic requirements for the students in the field of robotics and Automation. On learning these courses students will be able to design and develop various robots and End effectors for various applications. Students will be able to write programs for robots for various industrial automation applications.
- Dr. N. Ganesh Kumar, Associate Professor from PSG Tech appreciated the idea of introducing **SMRA2701 - Robotics and CAM Lab (Practical Course)** and **SMRA1701 - Robotics and Machine Vision System (Theory Course)** saying that skill set of the mechatronics engineering students of Sathyabama Institute of science and technology will match the current needs of the robotics and Automation Industry.
- Dr. L. Vijayaraghavan, Professor from IIT Madras, Chennai and Dr. N. Ganesh Kumar, Associate Professor from PSG Tech (External BOS members) reviewed all the courses. The Board members appreciated the inclusion of the new courses in 2019 Regulation.

• NEWLY PROPOSED AND REVISED COURSES

SMEA3005	Non-Destructive Testing and Techniques	2022	7	New
SMRA1701	Robotics and Machine Vision System	2022	7	Revised
SMRA2701	Robotics and CAM Lab	2022	7	Revised

• NEW COURSES

SMEA3005 NON-DESTRUCTIVE TESTING AND TECHNIQUES

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

- ☐ To enable the student to understand the modern NDT techniques.
- ☐ To present the underlying principles and alternatives for destructive testing procedures.
- ☐ To provide the student with the opportunity for hands-on experience for diverse domains of application.

UNIT 1 INTRODUCTION AND VISUAL INSPECTION METHODS 9 Hrs.

Scope and advantages of NDT. Comparison of NDT with DT. Some common NDT methods used since ages, Terminology. Flaws and Defects, Visual Inspection-Unaided, Equipment used for visual inspection. Ringing test chalk test (oil whitening test). Attractive uses of above tests in detecting surface cracks, bond strength and surface defects.

UNIT 2 LIQUID PENETRANT TESTING AND MAGNETIC PARTICLE TESTING 9 Hrs.

Die penetrate test (liquid penetrate inspection), Principle, scope. Equipment & techniques, Tests stations, Advantages, types of penetrant and developers. Illustrative examples – Heavy castings of large size, frame of jet engine, porosity testing of nickel alloys, leak testing. Magnetic particle Inspection – Scope, principle, Ferro Magnetic and Non-ferro magnetic materials, equipment & testing. Advantages, limitations Interpretation of results. DC and AC magnetization, Skin Effect, use of dye and wet powders for magna glow testing, different methods to generate magnetic fields, Applications and demonstration.

UNIT 3 RADIOGRAPHIC METHODS 9 Hrs.

X-ray radiography principle, equipment and methodology. Applicability, types of radiations limitations. Interpretation of Radiographs, limitations of gamma-ray radiography –principle, equipment. Attenuation of electromagnetic radiations, source of radioactive materials and technique. Photo electric effect, Rayleigh's scattering (coherent scattering), Compton's scattering (Incoherent scattering). Pair production, Beam geometry, scattering factor. Precautions against radiation hazards. Xero-Radiography, Digital Radiography,

Gamma ray Radiography, Safety in X- ray and Gamma ray radiography. Advantages of gamma ray radiography over X-ray radiography.

UNIT 4 ULTRASONIC TESTING AND ACOUSTIC EMISSION TESTING 9 Hrs.

Introduction, Principle of operation, Piezoelectricity. Ultrasonic probes, CRO techniques, advantages, Limitation & typical applications. Applications in inspection of castings, forgings, Extruded steel parts, bars, pipes, rails and dimensions measurements. Acoustic Emission Technique – Introduction, Types of AE signal, AE wave propagation, Source location, Kaiser effect, AE transducers, Principle, AE parameters, AE instrumentation, Advantages & Limitations, Applications and demonstration.

UNIT 5 EDDY CURRENT TESTING AND THERMOGRAPHY 9 Hrs.

Eddy current Testing – Principle, properties of eddy currents, Eddy current sensing elements, probes, Instrumentation, Types of arrangement, Advantages and Limitations and applications. Thermography – Introduction, Principle, Contact and Non-Contact inspection methods, Active and Passive methods, Liquid Crystal – Concept, example, advantages and limitations. Electromagnetic spectrum, infrared thermography approaches, IR detectors, Applications and demonstration.

Max. 45 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to

CO1 - Recall the basic concepts of NDT.

CO2 - Interpret the quality of the components.

CO3 - Design the precautions against the radiation hazards.

CO4 - Apply the knowledge on Interpretation of results.

CO5 - Analyze products as production team member.

CO6 - Apply the knowledge on Electromagnetic spectrum.

END SEMESTER EXAMINATION QUESTION PAPER PATTERN

Max. Marks: 100 Exam Duration: 3 Hrs.

PART A: 10 Questions of 2 marks each – No choice 20 Marks

PART B: 2 Questions from each unit of internal choice, each carrying 16 marks 80 Marks

• REVISED COURSES

SMRA1701 ROBOTICS AND MACHINE VISION SYSTEM

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

• To introduce the robotic concepts, parts and various types of robots.

• To make the students familiar with sensors, drive systems for robot and their applications in robots, programming of robots.

• To understand the various applications of robots, justification, implementation and safety of robot.

UNIT 1 BASICS OF ROBOTICS 9 Hrs.

Introduction-Anatomy of Robot-Laws of robotics- Configurations of robot-work volume- -Spatial resolution-accuracy resolution –repeatability of robot-Drive Systems of Robot-Control system of Robot-: Robot motions Rotary to rotary motion, Rotary to linear motion, Harmonics Drives-Robotic sensors and actuators-control systems-Robot actuation and feedback components- Power transmission system.

UNIT 2 ROBOT END EFFECTORS 9 Hrs.

Robot End effectors: Types of End effectors- Mechanical gripper- types of gripper mechanism- gripper force analysis- other types of gripper- special purpose grippers-Tools-Selection and design of Grippers.

UNIT 3 ROBOT MECHANICS 9 Hrs.

Robot kinematics: Introduction-Position representation- rigid motion & homogeneous transformation forward & inverse kinematics- trajectory planning-Wrist Orientation-Manipulator path control. Robot Dynamics: Robot Arm dynamics – Lagrange - Euler formulation- Newton - Euler formulation.

UNIT 4 MACHINE VISION SYSTEM 9 Hrs.

Machine vision:- Sensing and Digitizing-Imaging Devices-Lighting Techniques-AD Converter-Image Processing-Data reduction-segmentation- Thresholding-Region Growing-Edge Detection-Feature extraction-Object recognition-Applications Inspection-identification-visual servicing and navigation-Training the vision.
UNIT 5 ROBOT PROGRAMMING 9 Hrs.

Robot programming: Types-Methods of Defining Position-Motion Interpolation-Commands-Branching-Robot Languages-Classification of robot language-Computer control and robot software-Val system and Languages-application of robots.

Max. 45 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able

CO1 - Understand the basic concepts of Robotics.

CO2 - Educate the various types of End effectors used in robots for various applications.

CO3 - Introduce the position representation on work space.

CO4 - Understand machine vision system and its applications.

CO5 - Impart knowledge on robot programming language and to educate how to program a robot.

CO6 - Upon completion of this course, the students can able to apply the basic engineering knowledge for the design of robotics.

SMRA2701 ROBOTICS AND CAM LAB

L T P Credits Total Marks

0 0 4 2 100

COURSE OBJECTIVES

ÿ To introduce different types of robotics and demonstrate them to identify different parts and Components.

ÿ To write programming for simple operations like pick and place, rotoxim etc.

ÿ Use of Adam's software and MAT Lab software to model the different types of robots and calculate work volume for different robots.

ÿ To study the features of CNC Machine Tool.

ÿ To expose students to modern control systems (Fanuc).

ÿ To know the application of various CNC machines like CNC lathe, CNC Milling etc.

SUGGESTED LIST OF EXPERIMENTS – ROBOTICS LAB

1. Study of Robot anatomy and programming methods.

2. Study of sensor operations using LEGO kits.

3. Study of Actuators using LEGO kits.

4. Programming of basic motion commands using Teach pendant.

5. Programming for pick and place and palletizing operation in Robot.

6. Programming the robot for a drilling and Milling application.

7. Programming on operation for cutting and welding application.

8. Programming a parallel kinematic robot for a pick and place application.

9. Introduction to Matlab for Image processing.

10. Reduction and Noise and Grey levels using Mat lab.

SUGGESTED LIST OF EXPERIMENTS - CAM LAB

CNC LATHE

i) Part Programming for;

· Facing

· Turning

· Step Turning

· Taper Turning

· Chamfering

· Threading

· Grooving

- Boring
- Drilling
- CNC MILLING
- i) Part Programming for:
 - Point to Point Motions
 - Linear Motions
 - Contour Motions
 - Peck Drilling
 - Rectangular Pocketing
 - Circular Pocketing
 - Mirroring

COURSE OUTCOMES

On completion of the course, student will be able

- CO1 - Provide sufficient knowledge of industrial robot.
- CO2 - Understand basic knowledge of robot programming.
- CO3 - Understand the concepts of work volume, configuration of industrial robot.
- CO4 - Understand the latest development in CNC system.
- CO5 - Understand the basic concepts of CNC programming and machining.
- CO6 - Prepare CNC Part Programming and preform manufacturing.

SPR4054 CAD /CAM LAB

(For Mech, Mech&Prod & Auto)

L T P Credits Total Marks

0 0 4 2 100

SUGGESTED LIST OF EXPERIMENTS

A.CAD LAB

CAD ANALYSIS USING ANALYSIS SOFTWARE

Exercises will be given on Analyzing of mechanical components using Suitable Software

1. Cantilever beam with Point load at the end
2. Simply supported beam with inclined load
3. Overhanging beam with Uniformly distributed load (UDL)
4. Determination of deflection for a Truss system
5. Determination of deflection in a Pressure vessel
6. Determination of deflection in a Bent tube
7. Determination of temperature distribution in a stepped bar
8. Analysis of a bicycle frame
9. Thermal - mixed boundary example

B.CAM LAB

1. CNC Milling

(i). Part Programming for: Point to point motions, Contour motions, Circular milling, Linear motions, Pocket milling, Mirroring Commands, Circular interpolations (both CW & CCW), Rectangular milling.

(ii). Part Programming involving fixed or canned cycles: Drilling, Peck drilling, Boring and Tapping. (iii). Part programming using: Do loops, Sub Routines.

2. CNC Lathe

(i). Part programming for: Turning, Facing, Chamfering, Grooving, Step Turning, Taper Turning, Circular Interpolation.

(ii). Part programming using standard fixed cycles: Turning, Facing, Taper Turning, Thread Cuttings.

COURSE OUTCOME

- CO1 - Execute steps required for modeling 3D objects by using protrusion, cut, sweep, extrude commands
- CO2 - Convert 3D solid models into 2D drawing-different views, sections
- CO3 - Use isometric views and dimensioning of part models
- CO4 - Machine simple components on CNC machines
- CO5 - Use CAM software to generate NC code
- CO6 - Implement CNC programs for milling and turning machining operations

SMR4052 ROBOTICS LAB

L T P Credits Total Marks

0 0 4 2 100

SUGGESTED LIST OF EXPERIMENTS

1. Study of Robot anatomy and programming methods
2. Study of sensor operations using LEGO kits
3. Study of Actuators using LEGO kits
4. Programming of basic motion commands using Teach pendant
5. Programming for pick and place operation in ROBOT
6. Programming the robot for a drilling application
7. Programming on palletizing operation
8. Programming a parallel kinematic robot for a pick and place application
9. Introduction to Matlab for Image processing
10. Reduction and Noise and Grey levels using Matlab

Course Outcome

After the successful completion of the course the students will be able to:

CO1 - Explain the fundamentals of robotics and its components

CO2 - Illustrate the Kinematics and Dynamics of robotics

CO3 - Elucidate the need and implementation of related Instrumentation & control in robotics

CO4 - Illustrate the movement of robotic joints with computers/microcontrollers.

CO5 - Explain sensors and instrumentation in robotics

CO6 - To learn about application of robot

12	Mr Aman Dinodya	Students	Sathyabama Institute of Science & Technology	Student Member

- Mr. V. Jayaprakash proposed a new course entitled **SPR1403 Modern Manufacturing Processes** (Theory) based on the Industrials needs and futuristic requirements for the students in the field of manufacturing and Automation. Learning this course gives an insight of various non-conventional machining process. This allows the students to choose the appropriate machining process like ECM, EBM, LBM, PAM, USM etc. for different application. By learning this course, the student will also be able to develop a hybrid material removal process and develop new hybrid technologies which enables them to become an entrepreneur. Learning this course will also develop the skill set of the student and make them to be readily suitable for the manufacturing.

- As per the suggestions given by Dr. Sangeetha the theory course **SMR1301 - Micro Electro Mechanical Systems** (Regulation 2018) has been revised as **SMRA1602 - Micro Electro Mechanical Systems** (Regulation 2019) according to the current industrial needs which enables the student to learn basics of COMSOL software and to design micro devices, micro systems for various applications.
- Mr. J. Senthil Kumar revised the theory course **SMR1302 - Sensors and Instrumentation** (Regulation 2018) as **SMRA1601 Sensors and Instrumentation** (Regulation 2019). Learning this course will help the student to design and calibrate the instruments for manufacturing industries. He also presented the revised practical course **SMRA2601 Sensors and Instrumentation Lab** (Regulation 2019) from **SMR4051 - Sensors and Instrumentation Laboratory** (Regulation 2018). This course enables the students to build his career in quality, automation and instrumentation engineering sectors.
- Dr. L. Vijayaraghavan, Professor from IIT Madras, Chennai welcomed the idea of introducing **SPR1403 Modern Manufacturing Processes** (Theory) courses saying that skill set of the students of Sathyabama Institute of science and technology will match the current needs of the industry in introducing **Robotics and Machine Vision System SMR1401** (Theory) and **Robotics Lab SMR4052** (Practical) in the curriculum
- Dr. L. Vijayaraghavan, Professor from IIT Madras, Chennai and Dr. N. Ganesh Kumar, Associate Professor from PSG Tech (External BOS members) reviewed all the courses. The Board members appreciated the inclusion of the new courses in 2019 Regulation.

Red highlighted contents are

NEW COURSE

SPR1403 MODERN MANUFACTURING PROCESSES

L T P Credits Total

Marks

3 0 0 3 100

COURSE OBJECTIVES

- To understand the basic concepts of different machining process.
- To understand the basic concepts of non-traditional machining

UNIT 1 MECHANICAL PROCESSES 9 Hrs.

Ultrasonic Machining- Elements of process, cutting tool system design, effect of parameters, economic considerations, applications, limitations of the process, advantages and disadvantages. Abrasive Jet Machining- Variables in AJM, metal removal rate in AJM. Water Jet Machining- Jet cutting equipments, process details, advantages and applications

UNIT 2 ELECTROCHEMICAL AND CHEMICAL METAL REMOVAL PROCESSES 9 Hrs.

Electrochemical Machining- Elements of ECM process, tool work gap, chemistry of the process, metal removal rate, accuracy, surface finish and other work material characteristics, economics, advantages, applications, limitations. Electrochemical Grinding – Material removal, surface finish, accuracy, advantages, applications.

UNIT 3 THERMAL METAL REMOVAL PROCESSES 9 Hrs.

Electric Discharge Machining (EDM) or spark erosion machining processes, mechanism of

metal removal, spark erosion generators, electrode feed control, dielectric fluids, flushing. Electrodes for spark erosion, selection of electrode material, tool electrode design, surface finish, machining

accuracy, machine tool selection and applications. Wire cut EDM. Laser beam machining (LBM) - Apparatus, material removal, cutting speed and accuracy of cut, metallurgical effects, advantages and limitations

UNIT 4 PLASMA ARC MACHINING (PAM) 9 Hrs.

Plasma, non-thermal generation of plasma, mechanism of metal removal, PAM parameters, equipment's for D.C. plasma torch unit, safety precautions, economics, other applications of plasma jets - Electron Beam Machining (EBM)– Generation and control of electron beam, theory of electron beam machining, process capabilities and limitations.

UNIT 5 ULTRASONIC MACHINING AND HYBRID PROCESSES 9 Hrs.

Ultrasonic machining system, mechanics of cutting, process parameters, analysis, capability, grain growing model, grain hammering model, limitations and applications Introduction, working principle, equipment, process parameters, process capabilities and applications of electro chemical grinding (ECG), electrical discharge grinding (EDG), electro chemical discharge grinding (ECDG).

Max.45 Hours

COURSE OUTCOMES:

On completion of the course, student will be able to

CO1: Analyse the fundamentals of the non-traditional machining processes.

CO2: Explain the working principle of chemical metal removal processes.

CO3: Choose a suitable nontraditional machining process for electrochemical metal removal processes.

CO4: Compare the construction and working of electrical metal removal processes.

CO5: Categorize the EBM, LBM, PAM and USM processes.

CO6: Apply a suitable nontraditional machining process for hybrid metal removal processes.

END SEMESTER EXAM QUESTION PAPER PATTERN

Max. Marks : 100 Exam Duration : 3 Hrs.

PART A : 2 Questions from each unit, each carrying 2 marks 20 Marks

PART B : 2 Questions from each unit with internal choice, each carrying 16 marks 80 Marks

• REVISED COURSES

SMRA1601 SENSORS AND INSTRUMENTATION

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

- ÿ To understand the characteristics of instruments and the sources and types of errors.
- ÿ To be familiar with different types of sensors.
- ÿ To know the techniques and methods for measurement of displacement, force, velocity.
- ÿ To know the techniques and methods for measurement of Pressure, Temperature, Flow, Level.

UNIT 1 MEASUREMENTS 9 Hrs.

General Configuration and functional description of measuring instruments-Characteristics of instruments-Static characteristics -Dynamic characteristics - Types of errors -sources of errors- methods of elimination-Analysis of data - Limiting Errors-Relative limiting error-Combination of Quantities with limiting errors – Statistical treatment of data: Histogram, Mean, Measure of dispersion from the mean, Range, Deviation, Average deviation, Standard Deviation, variance.

UNIT 2 SENSORS 9 Hrs.

Sensors for Motion and Position Measurement, GPS, INS, Doppler, SONAR, Thermal Sensors – Gas Thermometric Sensors, Acoustic Temperature Sensor, Thermo-EMF Sensors, NQR Thermometry, Heat Flux Sensor, Chemical Sensor, Hall Effect Sensor, Tactile sensor, Ultrasonic sensor, High speed Image sensor.

UNIT 3 MEASUREMENT OF DISPLACEMENT, FORCE, VELOCITY 9 Hrs.

Transducers for displacement-potentiometer, LVDT, Capacitance types, Optical Encoder, Transducers for Strain-Strain gauge, gauge factor, temperature compensation, Wheatstone bridge, Force Measurement – Load cell, different types of load cells – elastic load cell-strain gauge load cell. Torque measurement-Using strain gauge and magneto elastic principle. Transducers for velocity– Revolution counter-capacitive tachometer, tachometer, D.C and A.C tachometer generators – stroboscopic methods. Measurement of Acceleration - Elementary accelerometer, Seismic accelerometer, Practical accelerometers.

UNIT 4 MEASUREMENT OF TEMPERATURE AND PRESSURE 9 Hrs.

Measurement of Temperature- Thermometer, Thermocouple, Thermistor, Pyrometer. Measurement of Pressure: Manometers – different types of manometers, Elastic pressure transducers, Dead weight Tester, Electrical types, Vacuum gauges - McLeod gauge, Knudsen gauge, thermocouple gauge, ionization gauge, Differential pressure Transmitter - electrical & pneumatic types.

UNIT 5 MEASUREMENT OF FLOW, LEVEL 9 Hrs.

Orifice, Venturi, Pitot tube, flow nozzle rotameter, Doherty tube, Positive displacement meter, turbine flow meter, electromagnetic flow meter, ultrasonic flow meter, open channel flow measurement, solid flow measurement. Level: Sight glass, float gauge, displacer, torque tube, bubbler tube, diaphragm box, Differential Pressure methods, electrical methods-resistance type, capacitance type, ultrasonic level gauging.

Max. 45 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to

- CO1 - Understand the characteristics of instruments and determine the errors associated with it.
- CO2 - List the various sensors and its applications.
- CO3 - Understand the techniques of measurement of Displacement, Force, Velocity, Industrial parameters..
- CO4 - Apply the knowledge of measurement in industries.
- CO5 - Select a device for particular measurement.
- CO6 - Develop an appropriate method for measurement.

END SEMESTER EXAMINATION QUESTION PAPER PATTERN

Max. Marks: 100 Exam Duration: 3 Hrs.

PART A: 10 Questions of 2 marks each - No choice 20 Marks

PART B: 2 Questions from each unit with internal choice, each carrying 16 marks 80 Marks

SMR1302 SENSORS AND INSTRUMENTATION

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

- ☐ The principle and applications of various measurement systems.
- ☐ Learn about sensors and its uses.

UNIT 1 MEASUREMENT SYSTEMS 9 Hrs

Generalized Measurement System – Performance Characteristics: Static and Dynamic Characteristics – Errors in Measurements – Calibration and Standards – Generalized Performance of Zero Order, First Order and Second Order Systems – Classifications of Transducers - General working principles of Resistive, capacitive and inductive type transducers with governing equations.

UNIT 2 MEASUREMENT OF NON-ELECTRICAL PARAMETERS – 1 9 Hrs

Linear and angular displacement: Resistive, capacitive, inductive types and Optics (encoders), proximity sensors Velocity measurement: tachometers, tach generators and resolvers Temperature measurement: Contact type: Bimetallic, RTD, Thermocouple and Thermistor Non- Contact type: Radiation Pyrometer – Optical Pyrometer Humidity: Capacitive and resistive and hot and wet bulbs. Other sensors: Fire, smoke and metal detectors.

UNIT 3 MEASUREMENT OF NON-ELECTRICAL PARAMETERS -2 9 Hrs

Force measurement: Resistive type strain gauges: Bridge configurations, Temperature compensation, Load cells, Fiber optic strain gauge- Semiconductor strain gauges- Piezo electric transducers. Vacuum Measurement: McLeod Gauge, Thermal Conductivity Gauge – Ionization Gauge. Airflow: Anemometers Light: UV, IR, Light emitter and detector Introduction to Acoustics and acoustic sensors: Ultrasonic sensor- Types and working of Microphones and Hydrophones – Sound level meters- nuclear radiation sensors.

UNIT 4 MEASUREMENT OF ELECTRICAL PARAMETERS 9 Hrs

3 phase & 1 phase 1 watt meter and power factor - Resistive, capacitive and inductive measurements Instrument Transformers: CT and PT; their errors, Applications of CT and PT in the extension of instrument range.

UNIT 5 SIGNAL CONDITIONING AND DATA ACQUISITION 9 Hrs

Amplification, Filtering – Level conversion – Linearization - Buffering – Sample and Hold circuit – Quantization – Multiplexer / De multiplexer – Analog to Digital converter – Digital to Analog converter/P and P/I converter - Instrumentation Amplifier-V/F and F/V converter Data Acquisition -Data Logging – Data conversion – Introduction to Digital Transmission system.

Max. 45 Hours

COURSE OUTCOMES

On completion of the course, student will be able to

- CO1 - Understand the characteristics of instruments and determine the errors associated with it.
- CO2 - List the various sensors and its applications.
- CO3 - Understand the techniques of measurement of Displacement, Force, Velocity, Industrial parameters..
- CO4 - Apply the knowledge of measurement in industries
- CO5 - Select a device for particular measurement
- CO6 - Develop an appropriate method for measurement

Max. Marks: 100 Exam Duration: 3 Hrs.

PART A : 2 Questions from each unit, each carrying 2 marks 20 Marks

PART B : 2 Questions from each unit with internal choice, each carrying 16 marks 80 Marks

SMRA1602 MICRO ELECTRO MECHANICAL SYSTEMS

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

- To have adequate knowledge in MEMS and Microsystems.
- To understand the fabrication procedures and have knowledge on MEMS sensors and actuators and their applications.
- To be made aware of the MEMS design procedures and RFMEMS.
- To investigate various applications of MEMS.

UNIT 1 INTRODUCTION 9 Hrs.

Intrinsic Characteristics of MEMS – Energy Domains and Transducers- Sensors and Actuators – Introduction to Micro fabrication – Silicon based MEMS processes – New Materials – Review of Electrical and Mechanical concepts in MEMS – Semiconductor devices – Stress and strain analysis – Flexural beam bending- Torsional deflection.

UNIT 2 MICRO SENSORS AND ACTUATORS 9 Hrs.

Micro-sensing for MEMS: Piezo-resistive Pressure Sensor, Capacitive sensor, Piezoelectric sensing, Resonant sensing, Surface Acoustic Wave Sensors Vibratory gyroscope, Electromechanical transducers: Piezoelectric transducers, Electrostrictive transducers, Magnetostrictive transducers, Electrostatic actuators, Electromagnetic transducers, Electrodynamic transducers, Case Study-Piezo-resistive pressure sensor, Comb drive actuators.

UNIT 3 MICROMACHINING 9 Hrs.

Silicon Anisotropic Etching – Anisotropic Wet Etching – Dry Etching of Silicon – Plasma Etching – Deep Reaction Ion Etching (DRIE) – Isotropic Wet Etching – Gas Phase Etchants – Case studies – Basic surface micro machining processes – Structural and Sacrificial Materials – Acceleration of sacrificial Etch – Striction and Antistriction methods – LIGA Process – Assembly of 3D MEMS – Foundry process.

UNIT 4 POLYMER AND OPTICAL MEMS 9 Hrs.

Polymers in MEMS– Polimide – SU-8 – Liquid Crystal Polymer (LCP) – PDMS – PMMA – Parylene – Fluorocarbon – Application to Acceleration, Pressure, Flow and Tactile sensors- Optical MEMS – Lenses and Mirrors – Actuators for Active Optical MEMS.

UNIT 5 MEMS PACKAGING AND APPLICATIONS 9 Hrs.

MEMS packaging: Role of MEMS packaging, Types of MEMS packaging, selection of packaging materials, flip-chip and multichip Unit packaging, RF MEMS packaging issues. Micro-machined transmission line and components, micro-machined RF Filters, Micromachined Phase shifters, and Micro-machined antenna, Gyros and Bio-MEMS. Recent.

Max. 45 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to

- CO1 - Understand the basics of MEMS technology and microsystems.
- CO2 - Acquire knowledge in the types and procedures involved in MEMS fabrication.
- CO3 - Apply the acquired knowledge in understanding MEMS sensors and actuators.
- CO4 - Analyse various MEMS design and familiarise with optical RF MEMS.
- CO5 - Ability to understand the operation of micro devices, micro systems and their applications.
- CO6 - Ability to design the micro devices, micro systems using the MEMS fabrication process.

SMR1301 MICRO ELECTRO MECHANICAL SYSTEMS

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

On completion of this course the student will recognize

- ☐ Acquire knowledge about the Micromachining
- ☐ Acquire knowledge about MEMS Devices

UNIT 1 INTRODUCTION 9 Hrs.

Introduction to MEMS: Introduction to Microsystems and microelectronics - Market scenario for MEMS. Working principle: Trimmers scaling vector and scaling laws - scaling in geometry – scaling in rigid body dynamics- scaling in electrostatic forces - scaling in electricity - scaling in fluid mechanics - scaling in heat transfer. Materials for MEMS: Silicon as a MEMS material – Crystal structure of silicon - Miller indices - silicon compounds - SiO₂, SiC, Si₃N₄ and polycrystalline silicon - silicon piezoresistors - Gallium arsenide - polymers for MEMS -quartz.

UNIT 2 FABRICATION OF MEMS 9 Hrs.

Clean room technology - Substrates and wafer - single crystal silicon wafer formation – ideal substrates - mechanical properties - Processes for bulk micro machining - Wet Vs dry etching - Chemical etching of Silicon - etchant systems and etching process - Reactive ion etching and DRIE - mask layout design. Processes for Surface micro machining - Deposition processes - ion implantation -Diffusion - oxidation - chemical vapor deposition -physical vapor deposition - deposition by epitaxy - photolithography and photoresists. Limitations of Bulk and surface micromachining - LIGA, SLIGA and other micro molding processes such as HeXIL

UNIT 3 DESIGN CONSIDERATIONS BASED ON MICROMECHANICS 9 Hrs.

Micromechanics considerations - static bending of thin plates - circular plates with edge fixed - rectangular plate with all edges fixed - square plate with all edges fixed - mechanical vibration - resonant vibration - micro accelerometers - design theory and damping coefficients – thermos mechanics - thermal stresses - fracture mechanics - stress intensity factors - fracture toughness – and interfacial fracture mechanics

UNIT 4 MEMS DEVICES 9 Hrs.

Micro actuation techniques - piezoelectric crystals - Shape memory alloys - bimetallic – conductive polymers. Micro motors - micro grippers - Microfluidic devices - Micro pumps - mechanical and nonmechanical micropumps - micro valves - valveless micropumps - Lab on Chip. Types of micro sensors – Micro accelerometer – Micro pressure sensors, MEMS switches/resonators, MEMS reliability.

UNIT 5 MICROSYSTEM PACKAGING AND DESIGN 9 Hrs.

Micro system packaging - materials die level device level - system level - packaging techniques – die preparation - surface bonding - wire bonding - sealing - Case studies. Design considerations – process design - mechanical design - applications of micro system in automotive - bio medical - aerospace – telecommunication industries

Max. 45 Hours

COURSE OUTCOMES

On completion of the course, student will be able to

- CO1 - Understand the basics of MEMS technology and microsystems.
- CO2 - Acquire knowledge in the types and procedures involved in MEMS fabrication.
- CO3 - Apply the acquired knowledge in understanding MEMS sensors and actuators.
- SATHYABAMA UNIVERSITY FACULTY OF MECHANICAL ENGINEERING

L T P Credits Total Marks

0 0 3 2 100

COURSE OBJECTIVES

1. To understand the working of sensors and transducers.
2. To understand the characteristics of sensors.
3. To calibrate voltmeter and ammeter.

SUGGESTED LIST OF EXPERIMENTS

1. Characteristics of Thermocouple.
2. Characteristics of Potentiometer.
3. Characteristics of Strain Gauge.
4. Characteristics of LVDT.
5. Calibration of Voltmeter using Potentiometer.
6. Calibration of Ammeter using Potentiometer.
7. Characteristics of Load Cell.
8. Characteristics of Resistance Thermometer.
9. Characteristics of Thermistor.
10. Characteristics of Synchros.
11. Characteristics of Piezoelectric Sensor.
12. Characteristics of Hall Effect Sensor.

COURSE OUTCOMES

On completion of the course, students are able to

- CO1 - Understand the functioning of few sensors and transducers.
- CO2 - Understand the characteristics of few sensors and transducers.
- CO3 - Understand the process and need for calibration.
- CO4 - Calibrate voltmeters and ammeters.
- CO5 - Choose the sensor for measurement of few parameters.
- CO6 - Use the appropriate sensor and calibrate.

School of Mechanical Engineering

Minutes of Board of Studies Meeting held on 12-06-2021 (Saturday)

Meet Time: 10.45 a.m. to 12.30 noon

The meeting started with the welcome address delivered by Dr. S. Prakash, Professor and Dean (Session Chair). He introduced the various new courses and revised courses offered to Mechatronics Engineering students to the BOS panel members. The following are the BOS members were present during the Mechatronics Engineering BOS meeting.

Sl. No.	Name	Designation	Institution	Role
1	Dr. S. Prakash	Professor and Dean	Sathyabama Institute of Science & Technology	Chair person
2	Dr.L.Vijayaraghavan	Professor	IIT Madras, Chennai	BoS Member (External)
3	Dr.N.GaneshKumar	Associate Professor	PSG Tech, Coimbatore	BoS Member (External)
4	Dr. B. Kanimozhi	Professor	Sathyabama Institute of Science & Technology	Member
5	Dr. S. Sivasaravanan	Associate Professor	Sathyabama Institute of Science & Technology	Member
6	Dr. M Sangeetha	Associate Professor	Sathyabama Institute of Science & Technology	Member

11	Mr. M Vigneshwar	Students	Sathyabama Institute of Science & Technology	Student Member
12	Mr Aman Dinodya	Students	Sathyabama Institute of Science & Technology	Student Member

- Dr. J. R. Deepak proposed a new course entitled **Robotics and Machine Vision System SMR1401** (Theory) and **Robotics Lab SMR4052** (Practical) courses based on the futuristic requirements for the students in the field of robotics and Automation. On learning this course students will be able to design and develop various robots and End effectors for various applications. Students will be able to write programs for robots for various industrial automation applications. The course curriculum able the student to select the appropriate end effector, actuator, driver for various process and loading applications.

- **SMR1402 Computer Aided Design** (Theory) **SPR4054 CAD / CAM Lab** (Practical) course was proposed by Dr. Sangeetha as the students has to learn the basics concepts of CAD and to learn 2D and 3D modelling CAD and CAM software's likes PROE, CREO, SOLIDWORKS, CATIA, FANUC Simulator, MASTER CAM which enhances the modelling and programing skill which will help the student to become a CAD Designer and CNC Programmers in manufacturing and automation industries.
- **SMRA2501 Mechatronics and Simulation lab** course was revised and proposed from the **2018 regulation** practical course **SME4058 Mechatronics Lab** by Mr. V. Jayaprakash as the students has to learn the basics of Fluid Sim Software enhances the programing skill which will help the student to become a Hydraulic and pneumatic system Designer for automation industries. Students will be able simulation package by constructing the system models for the specified
- Dr. N. Ganesh Kumar, Associate Professor from PSG Tech welcomed the idea of introducing **Robotics and Machine Vision System SMR1401** (Theory) and **Robotics Lab SMR4052** (Practical) courses saying that skill set of the students of Sathyabama Institute of science and technology will match the current needs of the industry in introducing **Robotics and Machine Vision System SMR1401** (Theory) and **Robotics Lab SMR4052** (Practical) in the curriculum
- Dr. L. Vijayaraghavan, Professor from IIT Madras, Chennai and Dr. N. Ganesh Kumar, Associate Professor from PSG Tech (External BOS members) reviewed all the courses. The Board members appreciated the inclusion of the new courses in 2019 Regulation.

• NEWLY PROPOSED AND REVISED COURSES

SMR1401	Robotics And Machine Vision System	2021	7	New
SMR1402	Computer Aided Design	2021	7	New
SPR4054	CAD / CAM Lab	2021	7	New
SMR4052	Robotics Lab	2021	7	New
SMRA2501	Mechatronics and Simulation lab	2021	5	Revised

• NEW COURSES

SMR1401 ROBOTICS AND MACHINE VISION SYSTEM

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVE

□ Upon completion of this course, the students can able to apply the basic engineering knowledge for the design of robotics

UNIT 1 BASICS OF ROBOTICS 9 Hrs.

Introduction- Basic components of robot-Laws of robotics- classification of robot-work space accuracy- resolution – repeatability of robot. Power transmission system: Rotary to rotary motion, Rotary to linear motion, Harmonics drives

UNIT 2 ROBOT END EFFECTORS 9 Hrs.

Robot End effectors: Introduction- types of End effectors- Mechanical gripper- types of gripper mechanism- gripper force analysis- other types of gripper- special purpose grippers.

UNIT 3 ROBOT MECHANICS 9 Hrs.

Robot kinematics: Introduction- Matrix representation- rigid motion & homogeneous transformation forward & inverse kinematics- trajectory planning. Robot Dynamics: Introduction – Manipulator dynamics – Lagrange - Euler formulation- Newton - Euler formulation

UNIT 4 MACHINE VISION FUNDAMENTALS 9 Hrs.

Machine vision: image acquisition, digital images-sampling and quantization-levels of computation Feature extraction- windowing technique- segmentation- Thresholding- edge detection- binary morphology - grey morphology

UNIT 5 ROBOT PROGRAMMING 9 Hrs.

Robot programming: Robot Languages- Classification of robot language-Computer control and robot software-Val system and Languages- application of robots.

Max. 45 Hours

COURSE OUTCOMES

On completion of the course, student will be able

CO1 - To understand the basic concepts of Robotics.

CO2 - To educate the various types of End effectors used in robots for various applications.

CO3 - To introduce the position representation on work space.

CO4 - To understand machine vision system and its applications.

CO5 - To impart knowledge on robot programming language and to educate how to program a robot.

CO6 - Upon completion of this course, the students can able to apply the basic engineering knowledge for the design of robotics.

END SEMESTER EXAM QUESTION PAPER PATTERN

Max. Marks : 100 Exam Duration : 3 Hrs.

PART A : 2 Questions from each unit, each carrying 2 marks 20 Marks

PART B : 2 Questions from each unit with internal choice, each carrying 16 marks 80 Marks

SMR1402 COMPUTER AIDED DESIGN

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

☐ To provide an overview of how computers are being used in mechanical component design

☐ Enable students to use computer and CAD software's for modeling of mechanical components

UNIT 1 FUNDAMENTALS OF COMPUTER GRAPHICS 9 Hrs.

Product cycle- Design process- sequential and concurrent engineering- Computer aided design –

CAD system architecture- Computer graphics – co-ordinate systems- 2D and 3D transformations

homogeneous coordinates - Line drawing -Clipping- viewing transformation

UNIT 2 GEOMETRIC MODELING 9 Hrs.

Representation of curves- Hermite curve- Bezier curve- B-spline curves-rational curves-Techniques

for surface modeling– surface patch- Coons and bicubic patches- Bezier and B-spline surfaces. Solid

modeling techniques- CSG and B-rep

UNIT 3 VISUAL REALISM 9 Hrs.

Hidden – Line-Surface-Solid removal algorithms – shading – colouring – computer animation.

UNIT 4 ASSEMBLY OF PARTS 9 Hrs.

Assembly modelling – interferences of positions and orientation – tolerance analysis-mass property

calculations – mechanism simulation and interference checking.

UNIT 5 CAD STANDARDS 9 Hrs.

Standards for computer graphics- Graphical Kernel System (GKS) - standards for exchangeimagesOpen

Graphics Library (OpenGL) - Data exchange standards - IGES, STEP, CALSetc. -

communication standards.

Max. 45 Hours

COURSE OUTCOMES

On completion of the course, student will be able to

CO1 - Understand the basics of computer graphics, different graphics systems and applications of computer graphics

CO2 - Discuss various algorithms for scan conversion and filling of basic objects and their comparative analysis.

CO3 - Use of geometric transformations on graphics objects and their

application in composite form.

CO4 - Extract scene with different clipping methods and its transformation to graphics display device.

CO5 - Explore projections and visible surface detection techniques for display of 3D scene on 2D screen.

CO6 - Render projected objects to naturalize the scene in 2D view and use of illumination models for this.

END SEMESTER EXAM QUESTION PAPER PATTERN

Max. Marks : 100 Exam Duration : 3 Hrs.

PART A : 2 Questions from each unit, each carrying 2 marks 20 Marks

PART B : 2 Questions from each unit with internal choice, each carrying 16 marks 80 Marks

SPR4054 CAD /CAM LAB

(For Mech, Mech&Prod & Auto)

L T P Credits Total Marks

0 0 4 2 100

SUGGESTED LIST OF EXPERIMENTS

A.CAD LAB

CAD ANALYSIS USING ANALYSIS SOFTWARE

Exercises will be given on Analyzing of mechanical components using Suitable Software

1. Cantilever beam with Point load at the end
2. Simply supported beam with inclined load
3. Overhanging beam with Uniformly distributed load (UDL)
4. Determination of deflection for a Truss system
5. Determination of deflection in a Pressure vessel
6. Determination of deflection in a Bent tube
7. Determination of temperature distribution in a stepped bar
8. Analysis of a bicycle frame
9. Thermal - mixed boundary example

B.CAM LAB

1. CNC Milling

(i). Part Programming for: Point to point motions, Contour motions, Circular milling, Linear motions, Pocket milling, Mirroring Commands, Circular interpolations (both CW & CCW), Rectangular milling.

(ii). Part Programming involving fixed or canned cycles: Drilling, Peck drilling, Boring and Tapping. (iii). Part programming using: Do loops, Sub Routines.

2. CNC Lathe

(i). Part programming for: Turning, Facing, Chamfering, Grooving, Step Turning, Taper Turning, Circular Interpolation.

(ii). Part programming using standard fixed cycles: Turning, Facing, Taper Turning, Thread Cuttings.

COURSE OUTCOME

CO1 - Execute steps required for modeling 3D objects by using protrusion, cut, sweep, extrude commands

CO2 - Convert 3D solid models into 2D drawing-different views, sections

CO3 - Use isometric views and dimensioning of part models

CO4 - Machine simple components on CNC machines

CO5 - Use CAM software to generate NC code

CO6 - Implement CNC programs for milling and turning machining operations

SMR4052 ROBOTICS LAB

L T P Credits Total Marks

0 0 4 2 100

SUGGESTED LIST OF EXPERIMENTS

1. Study of Robot anatomy and programming methods
2. Study of sensor operations using LEGO kits
3. Study of Actuators using LEGO kits
4. Programming of basic motion commands using Teach pendant
5. Programming for pick and place operation in ROBOT
6. Programming the robot for a drilling application
7. Programming on palletizing operation
8. Programming a parallel kinematic robot for a pick and place application
9. Introduction to Matlab for Image processing
10. Reduction and Noise and Grey levels using Matlab

Course Outcome

After the successful completion of the course the students will be able to:

CO1 - Explain the fundamentals of robotics and its components

CO2 - Illustrate the Kinematics and Dynamics of robotics

CO3 - Elucidate the need and implementation of related Instrumentation & control in robotics

CO4 - Illustrate the movement of robotic joints with computers/microcontrollers.

CO5 - Explain sensors and instrumentation in robotics

CO6 - To learn about application of robot

• REVISED COURSES

SMRA2501 MECHATRONICS AND SIMULATION LAB

L T P Credits Total Marks

0 0 4 2 100

COURSE OBJECTIVES

ÿ To teach basics about the mechatronics systems and its interfacing.

ÿ To teach basic concepts of lab view software and its applications.

ÿ To teach fundamentals about image processing techniques.

SUGGESTED LIST OF EXPERIMENTS

- a. Basic cylinder sequencing operations using pneumatic trainer kit.
- b. Simulation of basic hydraulic and pneumatic circuits using software.
- c. Experiment on cylinder sequencing for A+ B+ A- B- using pneumatic trainer kit.
- d. Proportional Integral Derivative (PID) controller interfacing.
- e. Basic operations and interfacing of sensors in lab view.
- f. Study of Boolean operations in lab view.
- g. Speed control of stepper and servo motor using microprocessor kit.
- h. A/D and D/A Conversion.
- i. Assembly language programming of 8085 – Addition – Subtraction – Multiplication – Division – Sorting – code conversion.
- j. Design and testing of fluid power circuits to control (i) Velocity (ii) direction and (iii) force of single and double acting actuators.
- k. Study of Image Processing Technique.

COURSE OUTCOMES

On completion of the course, student will be able to

CO1 - Understand basics about pneumatic and hydraulic circuits.

CO2 - Understand basics about valves and controls.

CO3 - Understand the concepts of using PID controllers.

CO4 - Understand the knowledge of servo and stepper drives.

CO5 - Understand the concept of using Lab views.

CO6 - Understand the basics of analogue to digital convertors.

SME4058 MECHATRONICS LAB (2018 – Regulation)

(For Mech, Mech & Prod and Mechatronics)

L T P Credits Total

Marks

0 0 4 2 100

SUGGESTED LIST OF EXPERIMENTS

1. Basic cylinder sequencing operations using Pneumatic trainer Kit.
2. Simulation of basic Hydraulic and Pneumatic circuits using software
3. Experiment on cylinder sequencing for A+ B+ A- B- using pneumatic trainer kit.
4. Development of ladder logic programs based on Timer and Counter instructions
5. Proportional Integral Derivative (PID) controller interfacing
6. Basic operations and interfacing of Sensors in Lab view.
7. Modeling and analysis of basic electrical, hydraulic and pneumatic systems using LAB VIEW software
8. Speed control of stepper and servo motor using microprocessor kit.
9. A/D and D/A Conversion
10. Study of frequency response of closed loop systems using MATLAB

COURSE OUTCOMES

On completion of the course, student will be able to

CO1: Recommend the pneumatic/ hydraulic circuit and the component specifications required for the stated fluid power application using a fluid power simulation package.

CO2: Use the pneumatic/ hydraulic trainer kit to make the required pneumatic/ hydraulic cylinder sequencing.

CO3: Predict the system behavior using a simulation package by constructing the system models for the specified mechatronic systems.

CO4: Examine the signal conditioning systems and interfacing systems used in the mechatronics systems.

CO5: Develop the ladder programming in a simulation package for the given mechatronics systems.

CO6: Make the mechatronic circuit using the microprocessor/ microcontroller for the required mechatronic application.

Department of Mechatronics Engineering

School of Mechanical Engineering

Minutes of Board of Studies Meeting held on 21-12-2020 (Monday)

Meet Time: 10.00 a.m. to 12.30 noon

The meeting started with the welcome address delivered by Dr. S. Prakash, Professor and Dean (Session Chair). He introduced the courses to the BOS panel members. The following are the BOS members were present during the Mechatronics Engineering BOS meeting.

Sl. No.	Name	Designation	Institution	Role
1	Dr. S. Prakash	Professor and Dean	Sathyabama Institute of Science & Technology	Chair person
2	Dr.L.Vijayaraghavan	Professor	IIT Madras, Chennai	BoS Member (External)
3	Dr.N.GaneshKumar	Associate Professor	PSG Tech, Coimbatore	BoS Member (External)
4	Dr. B. Kanimozhi	Professor	Sathyabama Institute of Science & Technology	Member
5	Dr. S. Sivasaravanan	Associate Professor	Sathyabama Institute of Science & Technology	Member
6	Dr. M Sangeetha	Associate Professor	Sathyabama Institute of Science & Technology	Member
7	Mr. J. R. Deepak	Associate Professor	Sathyabama Institute of Science & Technology	Member
8	Dr.J. Lilly Mercy	Assistant Professor	Sathyabama Institute of Science & Technology	Member
9	Mr. V. Jayaprakash	Assistant Professor	Sathyabama Institute of Science & Technology	Member
10	Mr. J. Senthil Kumar	Assistant Professor	Sathyabama Institute of Science & Technology	Member
11	Mr. M Vigneshwar	Students	Sathyabama Institute of Science & Technology	Student Member
12	Mr Aman Dinodya	Students	Sathyabama Institute of Science & Technology	Student Member

Following are the discussions made in the BOS meeting

- Dr. Sangeetha suggested to revise the course **SMR1301 - Micro Electro Mechanical Systems** according to the current industrial needs which enables the student to learn basics of COMSOL software and to design micro devices, micro systems for various applications.
- Mr. J. Senthil Kumar recommended the updation in **SMR1302 - Sensors and Instrumentation** which enables the students to build his career in quality, automation and instrumentation engineering sectors. **SMR1302 Sensors and Instrumentation** help the student to design and calibration of instruments.
- **SMR1303 PLC and automation** course was proposed by Mr. V. Jayaprakash as the students has to learn the basics of SCADA, PLC and Automation enhances the programing skill which will help the student to become a PLC programmer in automation industries.

- Mr. V. Jayaprakash, proposed a new course **SMRA1201 - Fundamentals of Automation and Control** replacing **SMR1101 Digital Electronics** offered in 2018 syllabus in the second semester as the students has to learn the basics of Automation and Control which will be a prerequisite for the upcoming papers. He also suggested a new course **SMRA1401 Automation and Programmable Logic Controller** in the fourth semester as the students has to learn the basics of PLC and Automation.
- Dr. J. Lilly Mercy, suggested a new theory course **SMRA1402 Signal and Control System** in the fourth semester for students which is a prerequisite course for the other core courses. Dr. N. Ganesh Kumar, Associate Professor from PSG Tech (External BOS members) appreciated the inclusion of this paper in fourth semester which will enable the student to understand various types of system and different transfer function analyzing techniques associated with control systems. This course enhances the employability skills in antenna engineering satellite communications telecommunications Robotic vision and AI. This also makes the students to perform a vital role in designing and developing systems for manufacturing operations.
- Dr. L. Vijayaraghavan, Professor from IIT Madras, Chennai and Dr. N. Ganesh Kumar, Associate Professor from PSG Tech (External BOS members) reviewed all the courses. The Board members appreciated the inclusion of the new courses in 2019 Regulation.

New Course proposed in 2018 Syllabus

SMR1301 MICRO ELECTRO MECHANICAL SYSTEMS

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

On completion of this course the student will recognize

- Acquire knowledge about the Micromachining
- Acquire knowledge about MEMS Devices

UNIT 1 INTRODUCTION 9 Hrs.

Introduction to MEMS: Introduction to Microsystems and microelectronics - Market scenario for MEMS. Working principle: Trimmers scaling vector and scaling laws - scaling in geometry – scaling in rigid body dynamics- scaling in electrostatic forces - scaling in electricity - scaling in fluid mechanics - scaling in heat transfer. Materials for MEMS: Silicon as a MEMS material – Crystal structure of silicon - Miller indices - silicon compounds - SiO₂, SiC, Si₃N₄ and polycrystalline silicon - silicon piezo-resistors - Gallium arsenide - polymers for MEMS -quartz.

UNIT 2 FABRICATION OF MEMS 9 Hrs.

Clean room technology - Substrates and wafer - single crystal silicon wafer formation – ideal substrates - mechanical properties - Processes for bulk micro machining - Wet Vs dry etching - Chemical etching of Silicon - etchant systems and etching process - Reactive ion etching and DRIE - mask layout design. Processes for Surface micro machining - Deposition processes - ion implantation -Diffusion - oxidation - chemical vapor deposition -physical vapor deposition - deposition by epitaxy - photolithography and photoresists. Limitations of Bulk and surface micromachining - LIGA, SLIGA and other micro molding processes such as HeXIL

UNIT 3 DESIGN CONSIDERATIONS BASED ON MICROMECHANICS 9 Hrs.

Micromechanics considerations - static bending of thin plates - circular plates with edge fixed - rectangular plate with all edges fixed - square plate with all edges fixed - mechanical vibration - resonant vibration - micro accelerometers - design theory and damping coefficients – thermos mechanics - thermal stresses - fracture mechanics - stress intensity factors - fracture toughness – and interfacial fracture mechanics

UNIT 4 MEMS DEVICES 9 Hrs.

Micro actuation techniques - piezoelectric crystals - Shape memory alloys - bimetallics – conductive polymers. Micro motors - micro grippers - Microfluidic devices - Micro pumps - mechanical and nonmechanical micropumps - micro valves - valveless micropumps - Lab on Chip. Types of micro sensors – Micro accelerometer – Micro pressure sensors, MEMS

switches/resonators, MEMS reliability.

UNIT 5 MICROSYSTEM PACKAGING AND DESIGN 9 Hrs.

Micro system packaging - materials die level device level - system level - packaging techniques – die preparation - surface bonding - wire bonding - sealing - Case studies. Design considerations – process design - mechanical design - applications of micro system in automotive - bio medical - aerospace - telecommunication industries

Max. 45 Hours

COURSE OUTCOMES

On completion of the course, student will be able to

- CO1 - Understand the basics of MEMS technology and microsystems.
- CO2 - Acquire knowledge in the types and procedures involved in MEMS fabrication.
- CO3 - Apply the acquired knowledge in understanding MEMS sensors and actuators.
- CO4 - Analyse various MEMS design and familiarise with optical RF MEMS.
- CO5 - Ability to understand the operation of micro devices, micro systems and their applications.
- CO6 - Ability to design the micro devices, micro systems using the MEMS fabrication process.

SMR1302 SENSORS AND INSTRUMENTATION

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

- The principle and applications of various measurement systems.
- Learn about sensors and its uses.

UNIT 1 MEASUREMENT SYSTEMS 9 Hrs

Generalized Measurement System – Performance Characteristics: Static and Dynamic Characteristics – Errors in Measurements – Calibration and Standards – Generalized Performance of Zero Order, First Order and Second Order Systems – Classifications of Transducers- General working principles of Resistive, capacitive and inductive type transducers with governing equations.

UNIT 2 MEASUREMENT OF NON ELECTRICAL PARAMETERS - 19 Hrs

Linear and angular displacement: Resistive, capacitive, inductive types and Optics (encoders), proximity sensors Velocity measurement: tachometers, tachogenerators and resolvers Temperature measurement: Contact type: Bimetallic, RTD, Thermocouple and Thermistor Non- Contact type: Radiation Pyrometer – Optical Pyrometer Humidity: Capacitive and resistive and hot and wet bulbs. Other sensors: Fire, smoke and metal detectors.

UNIT 3 MEASUREMENT OF NON ELECTRICAL PARAMETERS - 29 Hrs

Force measurement: Resistive type strain gauges: Bridge configurations, Temperature compensation, Load cells, Fiber optic strain gauge- Semiconductor strain gauges- Piezo electric transducers. Vacuum Measurement: McLeod Gauge, Thermal Conductivity Gauge – Ionization Gauge. Airflow: Anemometers Light: UV, IR, Light emitter and detector Introduction to Acoustics and acoustic sensors: Ultrasonic sensor- Types and working of Microphones and Hydrophones – Sound level meters- Nuclear radiation sensors.

UNIT 4 MEASUREMENT OF ELECTRICAL PARAMETERS 9 Hrs

3 phase & 1 phase 1 watt meter and power factor - Resistive, capacitive and inductive measurements- Instrument Transformers: CT and PT; their errors, Applications of CT and PT in the extension of instrument range.

UNIT 5 SIGNAL CONDITIONING AND DATA ACQUISITION 9 Hrs

Amplification, Filtering – Level conversion – Linearization – Buffering – Sample and Hold circuit – Quantization – Multiplexer / De multiplexer – Analog to Digital converter – Digital to Analog converter- I/P and P/I converter - Instrumentation Amplifier-V/F and F/V converter Data Acquisition -Data Logging – Data conversion – Introduction to Digital Transmission system.

Max. 45 Hours

COURSE OUTCOMES

On completion of the course, student will be able to

- CO1 - Understand the characteristics of instruments and determine the errors associated with it.
- CO2 - List the various sensors and its applications.
- CO3 - Understand the techniques of measurement of Displacement, Force, Velocity, Industrial parameters..
- CO4 - Apply the knowledge of measurement in industries
- CO5 - Select a device for particular measurement
- CO6 - Develop an appropriate method for measurement

SMR1303 PLC AND AUTOMATION

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

On completion of this course the student will recognize

- Acquire knowledge about the PLC and automation systems

- Acquire knowledge about applications of PLC
- Acquire knowledge about Automation in various fields.

UNIT 1 PROGRAMMABLE LOGIC CONTROLLERS 9 Hrs

Introduction - Parts of PLC - Principles of operation - PLC sizes - PLC hardware components - I/O section - Analog I/O modules - digital I/O modules CPU processor memory module – PLC programming Simple instructions - Output control devices - Latching relays PLC ladder diagram, Converting simple relay ladder diagram in to PLC relay ladder diagram.

UNIT 2 INSTRUCTIONS 9 Hrs

Timer instructions ON Delay, OFF Delay and Retentive Timers-UP Counter, DOWN Counter and UP down Counters, program control instructions - Data manipulating instructions-math instructions

UNIT 3 APPLICATION OF PLC 9 Hrs

Traffic light control, 24 hour clock design, Automatic stacking process, temperature control, Automatic control of warehouse door, Automatic lubrication of supplier Conveyor belt, motor control.

UNIT 4 NETWORKING OF PLC AND SCADA 9 Hrs

Networking of PLCs-Data communication-Fieldbus, PROFIBUS, and Modbus-OSI Model types-OPC function. Supervisory Control and Data Acquisition-Architecture-Remote terminal unit-Master terminal unit-Data Storage

UNIT 5 DISTRIBUTED CONTROL SYSTEM 9 Hrs

Evolution - Architectures - Comparison - Local control unit - Process interfacing issues - Communication facilities. Operator interfaces - Low level and high level operator interfaces -Operator displays - Engineering interfaces - Low level and high level engineering interfaces Applications of DCS in - Pulp and paper environment -Power plant - Petroleum – Refining environment Introduction to Soft PLC.

Max. 45 Hours

COURSE OUTCOMES

On completion of the course, student will be able to

- CO1 - Understand the working of actuators, control valves, controllers, PLC.
- CO2 - Explain the use of actuators, control valves, controllers.
- CO3 - Select an appropriate controller for a process..
- CO4 - Apply the knowledge of PLC in control
- CO5 - Develop a program using ladder logic
- CO6 - Design a control system using PLC.

SMRA1201 FUNDAMENTALS OF AUTOMATION AND CONTROL

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

- ÿ Be aware of the scope and usefulness of industrial automation and its consequences.
- ÿ To apply automation technologies.
- ÿ Learn the most common sensors and ways of wiring.
- ÿ Differentiate the different types of actuators.

UNIT 1 MODELING AND ANALYSIS OF DYNAMIC SYSTEMS 9 Hrs.

Fundamental concepts in dynamic systems: systems, models, linearity, static behavior, dynamic behavior, modeling of continuous dynamic systems, Definition of transfer function. Block diagrams, Time response in linear systems.

UNIT 2 AUTOMATIC CONTROL 9 Hrs.

Concepts of feedback. Robustness, stability, accuracy, ability to follow set-points, PID control. Empirical tuning and analytical tuning, Feedback loop instrumentation, Control structures.

UNIT 3 INDUSTRIAL AUTOMATION 9 Hrs.

Concept of industrial automation, Continuous and discrete systems, Integrated production systems: CAD/CAM, CAE and CIM, General structure of an automated system, Examples of automated production systems.

UNIT 4 COMPONENTS OF AN AUTOMATED SYSTEMS 9 Hrs.

Control devices – open loop, closed loop, feedback control, Sensors- Types of sensors, Selection of Sensors, Application of sensors, Actuators- Types of actuators, Application of actuators.

UNIT 5 COMPUTER BASED INDUSTRIAL CONTROL 9 Hrs.

Introduction & Automatic Process Control, Building Blocks of Automation Systems: LAN, Analog & Digital I/O Modules, SCADA Systems & RTU. Distributed Control System: Functional Requirements, Configurations & some

popular Distributed Control Systems. (SLE: Display Systems in Process Control Environment.)

Max: 45 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to

CO1 - Select & identify suitable automation hardware for the given application.

CO2 - Describe & explain potential areas of automation.

CO3 - Differentiate various control aspects of automation.

CO4 - Demonstrate the self-learning capability of Industrial Automation.

CO5 - SCADA architecture, communication in SCADA, develops any application based on SCADA along with GUI using SCADA software.

CO6 - Understand evolution and architecture of DCS, hierarchical control in DCS, programming DCS through function Block Diagram (FBD) method.

2. Computer Based Industrial Control- Krishna Kant, EEE-PHI, 2nd Edition, 2010.

3. An Introduction to Automated Process Planning Systems- Tiess Chiu Chang & Richard A. Wysk.

4. Performance Modeling of Automated Manufacturing Systems,-Viswanandham, PHI, 1st Edition, 2009

SMRA1401 AUTOMATION AND PROGRAMMABLE LOGIC CONTROLLER

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

ÿ To familiarise with the actuators, control valves and different types of controllers.

ÿ To learn about the architecture of PLC and its working.

ÿ To write programs using ladder logic.

ÿ To design a PLC based control system.

UNIT 1 ACTUATORS AND CONTROL VALVES 8 Hrs.

Control valve:, Control valve Characteristics (Inherent & Installed) Control valve terminology: Range ability, Turndown, valve capacity, viscosity index, AO, AC (Fail Safe Action) etc. Classification of control valve based on: valve body, Construction, type of actuation and application . Construction & applications of Globe: Single, double, 3way, angle, Gate, Needle, Diaphragm, Rotary valves, Ball, Butterfly. Types of actuators: Construction, Advantages, Disadvantages & applications: Spring Diaphragm & Smart actuators. Positioners, Volume boosters, Pressure boosters, Reversing relay, Solenoid valves, Air lock, Position indicating switches, Electro pneumatic converter, Hand wheel, Motors.

UNIT 2 CONTROLLERS 9 Hrs.

Controllers: Discontinuous: ON/OFF, Multi-position Control, Floating Control, Continuous Controller: P, I, D controllers, Composite controllers, Anti-reset windup, Rate before Reset, Concept of Bump less transfers in PID controller, Effect of process characteristics on PID combination, Selection & application of controller actions.

UNIT 3 BASICS OF PROGRAMMABLE LOGIC CONTROLLER (PLC) 9 Hrs.

PLC Architecture and specifications – PLC hardware components Analog & digital Input/ Output modules - Power supplies – I/O slots, CPU & memory module – Programming devices –General PLC programming procedures - programming on-off outputs, Auxiliary commands and functions - creating ladder diagrams from process control descriptions – PLC programming Simple instructions – Manually operated switches – Mechanically operated a Proximity switches – Latching relays.

UNIT 4 PLC INTERMEDIATE FUNCTIONS 11 Hrs.

Arithmetic functions - number comparison functions - skip and MCR functions - data move systems. PLC Advanced intermediate functions- utilizing digital bits - sequencer functions - PLC Advanced functions: alternate-programming languages - operation. PLC basic programming – digital logic Gates – Boolean algebra. Basic PLC functions-register basics-timers-counters.

UNIT 5 APPLICATIONS OF PLC 8 Hrs.

Simple materials handling applications, Automatic control of warehouse door, Automatic lubrication of supplier Conveyor belt, motor control, Automatic car washing machine, Bottle label detection and process control application - Case Study of Bottle Filling System, Field Bus and HART Protocol.

Max. 45 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to

CO1 - Understand the working of actuators, control valves, controllers, PLC.

CO2 - Explain the use of actuators, control valves, controllers.

CO3 - Select an appropriate controller for a process.

CO4 - Apply the knowledge of PLC in control.

CO5 - Develop a program using ladder logic.

CO6 - Design a control system using PLC.

TEXT/ REFERENCE BOOKS

1. Process control and Instrument technology, C.D.Johnson, TMH.

2. Instrumentation for Process measurement and control , N.A. Anderson, CRC Press.
3. Introduction to Programmable Logic Controller, Gary Dunning, DELMAR Cengage Learning.
4. Programmable Logic Controller, Webb, PHI Reference Books.

SMRA1402 SIGNAL AND CONTROL SYSTEM ENGINEERING

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

ÿ To impart knowledge regarding the various types of system and different transfer function analyzing techniques associated with control systems.

ÿ To analyze the response and error of various types of system in time domain.

ÿ To understand the stability analysis of frequency domain systems.

UNIT 1 SYSTEM CONCEPTS 9 Hrs.

Basic Elements of Control System – Open loop and Closed loop systems - Differential equation - Transfer function, Modeling of Electric systems, Translational and rotational mechanical systems - Block diagram reduction Techniques - Signal flow graph- Mason's Gain Formula.

UNIT 2 TIME RESPOSE ANALYSIS OF CONTROL SYSTEMS 9 Hrs.

Standard test signals, Time response of first order and second order systems with unit step as input, Time domain specification, steady state errors and static error constants, Concept of stability- P, PI, PD and PID controllers.

UNIT 3 FREQUENCY RESPONSE AND STABILITY ANALYSIS OF CONTROL SYSTEM 9 Hrs.

Frequency Response of the System - Correlation between Time and Frequency Response - Gain and Phase Margin – Bode Plot The concept of stability- Routh Hurwitz stability Criterion.- Root Locus Analysis.

UNIT 4 CLASSIFICATION OF SIGNALS 9 Hrs.

Continuous time signals (CT signals) and Discrete time signals (DT signals) –Basic operations on signals-elementary signals- Step, Ramp, Pulse, Impulse, Exponential – Classification of CT and DT signals – Periodic, aperiodic signalsDeterministic and Random signals-even and odd signals – Real and Complex signals – Energy and power signals.

UNIT 5 FOURIER TRANSFORM AND LAPLACE TRANSFORM 9 Hrs.

Continuous time Fourier Transform –Properties of CTFT-Inverse Fourier transform- unilateral and bilateral Laplace Transform analysis with examples – Basic properties – Parseval's relation -Inverse Laplace transform using partial fraction expansion method – Relation between Fourier transform and Laplace transform.

Max. 45 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to

CO1 - Understand the types of control systems in different domains.

CO2 - Analyse the response of any linear time invariant system.

CO3 - Determine and analyse the stability of the system.

CO4 - Perform the analysis of the control system by Routh Hurwitz and Root Locus.

CO5 - Understand mathematical description and representation of continuous and discrete time signals.

CO6 - Analyze the spectral characteristics of continuous-time periodic and a periodic signals using Fourier transform and laplace transform.

11	Mr. M Vigneshwar	Students	Sathyabama Institute of Science & Technology	Student Member
12	Mr Aman Dinodya	Students	Sathyabama Institute of Science & Technology	Student Member

- Dr. S. Prakash proposed a new course entitled **Industry 4.0** based on the futuristic requirements for the students. The curriculum consists of various engineering discipline to promote inter disciplinary innovate thinking in students. The backdrop in introducing such courses is to promote collaborative research among the students leading to novel ideas. The curriculum includes topics from basic sciences, bioengineering, building sciences, smart manufacturing practices, smart world and Cyber Physical Systems.
- Dr. L. Vijayaraghavan, Professor from IIT Madras welcomed the idea of introducing **Industry 4.0** course saying that Sathyabama Institute of science and technology would be the pioneer in introducing **Industry 4.0** in the curriculum
- Dr. L. Vijayaraghavan, Professor from IIT Madras, Chennai and Dr. N. Ganesh Kumar, Associate Professor from PSG Tech (External BOS members) reviewed all the courses. The Board members appreciated the inclusion of the new courses in 2019 Regulation.

- **NEW COURSE ENTITLED INDUSTRY 4.0**

SAIC4001 INDUSTRY 4.0

L T P Credits Total Marks

2 - 2 2 100

UNIT 1 ADVANCED TECHNOLOGY AND ADVANCED MATERIALS 7 Hrs.

Advanced electro-optical sensing technology-active, passive multi-spectral and hyper spectral imaging; electronic beam steering; vacuum technology, surface and coating technology, health care technology, Nanotechnology- Nanomechanics, Nano optoelectronics; energy storage technology-next generation Li-based Batteries, Hydrogen storage, solar photovoltaic's, Flexible electronics. Intellectual Property Rights - case studies governing/pertaining to Materials/Technology.

UNIT 2 TRANSFORMING TECHNOLOGIES IN BIOENGINEERING 7 Hrs.

Establishment of smart biotechnology factory, Artificial intelligence in Bioprocess technology, Omics – Big data analysis through automation, 3D bio printing for tissue engineering. Simulation tools, RSM and Box model. Cyber physical system based telemedicine, diagnosis and therapeutics through real time biosensors. Bionanotechnology. Intellectual Property rights (IPR): Case Studies.

UNIT 3 ADVANCEMENTS IN SUSTAINABLE BUILT ENVIRONMENT 7 Hrs.

Introduction – Technological developments in Architectural, Engineering and Construction (AEC) - Building Information Modelling (BIM) using Cloud computing technology and Internet of things (IoT) – Unmanned Aerial Vehicles, sensors – Additive manufacturing in construction – Concrete 3D printing - Materials used - Lightweight and functionally graded structures - Net Zero Energy buildings, Bioswales, Biofiltration pond, Ecosan systems- Recent developments in Waste water Management, Air pollution control, waste disposal - Integration of energy, water and environmental systems for a sustainable development- Emerging Technologies: Robot Highway- Vertical farming - Intellectual Property rights: Case studies.

UNIT 4 SMART MANUFACTURING 8 Hrs.

Smart factories and interconnection, Smart Manufacturing – automation systems, Additive Manufacturing, Smart grids, Micro

Electro Mechanical Systems (MEMS), Stealth technology, Metal Finishing, Self propelled vehicles, e mobility, Green fuels, drones – unmanned aerial vehicles(UAVs), aerodynamics. Robotic Automation and Collaborative Robots – Augmented reality and haptics, engineering cybernetics and artificial intelligence (AI), Disruptive Technologies – Frugal Innovations – Emerging Technologies - Autonomous Robots, Swam Robot, Modular Robotics, Space craft, Intellectual Property Rights (IPR): Case Studies.

UNIT 5 SMART WORLD 8 Hrs.

Smart Sensors and IIOT, Smart grid, Hybrid renewable energy systems, Electronics in Smart city, Integration of Sensors in Robots and Artificial Intelligence, 5G Technology, Communication protocols, Human-Machine Interaction, Virtual Reality, Quantum Computing: Changing trends in transistor technology: Processor, Emerging Trends: Deep Space, Swarm Robots, Cyborg, Geofencing, Pervasive Computing, Intellectual Property Rights- Case Studies.

UNIT 6 CYBER PHYSICAL SYSTEMS 8 Hrs.

Introduction to Cyber Physical Systems (CPS), Architecture of CPS, Data science and technology for CPS, Prototypes of CPS, Emerging applications in CPS including social space, crowd sourcing, healthcare and human computer interactions, Industrial Artificial Intelligence, Networking systems for CPS applications, Wearable cyber physical systems and applications, Domain applications of CPS: Agriculture, Infrastructure, Disaster management, Energy, Transportation, Intellectual Property Rights (IPR) : Case Studies.

Max. 45 Hrs.

Following are the discussions made in the BOS meeting

- Mr. V. Jayaprakash, proposed a new course **SMRA1201 - Fundamentals of Automation and Control** replacing **SMR1101 Digital Electronics** offered in 2018 syllabus in the second semester as the students has to learn the basics of Automation and Control which will be a prerequisite for the upcoming papers.
- Dr. L. Vijayaraghavan, Professor from IIT Madras, Chennai and Dr. N. Ganesh Kumar, Associate Professor from PSG Tech (External BOS members) reviewed the course and approved the inclusion of the new course in 2019 Regulation.

New Course proposed in 2019 Syllabus

SMRA1201 FUNDAMENTALS OF AUTOMATION AND CONTROL

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

- ÿ Be aware of the scope and usefulness of industrial automation and its consequences.
- ÿ To apply automation technologies.
- ÿ Learn the most common sensors and ways of wiring.
- ÿ Differentiate the different types of actuators.

UNIT 1 MODELING AND ANALYSIS OF DYNAMIC SYSTEMS 9 Hrs.

Fundamental concepts in dynamic systems: systems, models, linearity, static behavior, dynamic behavior, modeling of continuous dynamic systems, Definition of transfer function. Block diagrams, Time response in linear systems.

UNIT 2 AUTOMATIC CONTROL 9 Hrs.

Concepts of feedback. Robustness, stability, accuracy, ability to follow set-points, PID control. Empirical tuning and analytical tuning, Feedback loop instrumentation, Control structures.

UNIT 3 INDUSTRIAL AUTOMATION 9 Hrs.

Concept of industrial automation, Continuous and discrete systems, Integrated production systems: CAD/CAM, CAE and CIM, General structure of an automated system, Examples of automated production systems.

UNIT 4 COMPONENTS OF AN AUTOMATED SYSTEMS 9 Hrs.

Control devices – open loop, closed loop, feedback control, Sensors- Types of sensors, Selection of Sensors, Application of sensors, Actuators- Types of actuators, Application of actuators.

UNIT 5 COMPUTER BASED INDUSTRIAL CONTROL 9 Hrs.

Introduction & Automatic Process Control, Building Blocks of Automation Systems: LAN, Analog & Digital I/O Modules, SCADA Systems & RTU. Distributed Control System: Functional Requirements, Configurations & some popular Distributed Control Systems. (SLE: Display Systems in Process Control Environment.)

Max: 45 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to

CO1 - Select & identify suitable automation hardware for the given application.

CO2 - Describe & explain potential areas of automation.

CO3 - Differentiate various control aspects of automation.

CO4 - Demonstrate the self-learning capability of Industrial Automation.

CO5 - SCADA architecture, communication in SCADA, develops any application based on SCADA along with GUI using SCADA software.

CO6 - Understand evolution and architecture of DCS, hierarchical control in DCS, programming DCS through function Block Diagram (FBD) method.

Agenda for the BOS Meeting:

Newly proposed programs – B.E Mechatronics Engineering – Expert Review and Comments on the syllabus

The BOS meeting has been convened to frame the new regulation for the proposed program B.E Mechatronics Engineering which is to be implemented for the Academic Year 2019-2020.

- Dr. J. Lilly Mercy proposed a new course entitled **Mechanics of Fluids** based on the futuristic requirements for the students of Mechatronics Engineering. She explained the need in bringing the course for Mechatronics Engineer, stating that this course develops the skill among the graduates by imparting a thorough idea on nature of flowing medium in the field of fluid mechanics. Moreover this course improves the employability for the graduates in core companies/industries.

- Dr. L. Vijayaraghavan, Professor, IIT Madras and Dr. N. Ganesh Kumar, Associate Professor PSG Tech, appreciated the internal members for analyzing the need of each and every course in the curriculum keeping the graduates outcome in mind and accepted for the approval of introducing **Mechanics of Fluids** new course in the curriculum.

• NEW COURSE ENTITLED MECHANICS OF FLUID

SMR1201 MECHANICS OF FLUID

L	T	P	Credits	Total	Marks
3	1	0	4		100

COURSE OBJECTIVES

- To understand fluid properties, flow characteristics and basic governing equations-mass, momentum, energy.
- To understand types of flow and boundary layer concept.

UNIT 1 FLUID PROPERTIES AND FLUID STATICS

9 Hrs.

Fluid - definition, distinction between solid and fluid - Units and dimensions – Properties of fluids - density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapor pressure, capillary and surface tension. Fluid statics: Pascal law - Hydrostatic law – Relative equilibrium - Pressure measurements using Manometers and pressure gauges - Forces on immersed plane and curved surfaces – Buoyancy – Meta-centre - Stability of floating and submerged bodies

UNIT 2 FLUID KINEMATICS AND FLUID DYNAMICS

9 Hrs.

Fluid Kinematics – Lagrangian and Eulerian descriptions - Flow visualization - Lines of flow -Types of flow - Flow characteristics – concept of control volume - velocity field and acceleration –continuity equation – energy equation – momentum equation – Impact of - Euler's equation along streamline - Bernoulli's equation– Applications - Venturi meter, Orifice meter, Pitot tube.

UNIT 3 FLUID FLOW AND DIMENSIONAL ANALYSIS

9 Hrs.

Laminar flow between parallel plates - Laminar flow through circular tubes (Hagen Poiseuille equation) - Turbulent Flow in a pipe – Boundary layer concepts – types of boundary layer thickness -Hydraulic and energy gradient - Darcy Weisbach equation - Pipe roughness – Friction factor -Moody's diagram minor losses - Flow through pipes in series and in parallel. Dimension and units -Buckingham π theorem - Discussions on dimensionless parameters – applications - Laws of models and similitude.

UNIT 4 HYDRAULIC TURBINES

9 Hrs.

Fluid machines: definition and classification - exchange of energy - Euler's equation for turbomachines - Construction of velocity vector diagram's - head and specific work - components of energy transfer - degree of reaction. Hydro turbines: definition and classifications - Pelton turbine -Francis turbine – propeller turbine - Kaplan turbine - working principles - velocity triangles - work done – specific speed -efficiencies -performance curve for turbines

UNIT 5 HYDRAULIC PUMPS

9 Hrs.

Pumps: definition and classifications - Centrifugal pump: classifications, working principles, velocity triangles, specific speed, efficiency and performance curves - Reciprocating pump: classification, working principles, indicator diagram, and work saved by air vessels and performance curves -Cavitations in pumps.

Max. 45 Hours

COURSE OUTCOMES

On completion of the course, student will be able to

- CO1 - Evaluate the hydrostatic stability of floating and submersible bodies.
- CO2 - Apply the Bernoulli's equation of fluid motion to flow measuring devices.
- CO3 - Evaluate the hydraulic coefficients and the energy losses in pipes.
- CO4 - Analyze the performance characteristics of centrifugal and reciprocating pumps.
- CO5 - Interpret the performance characteristics of hydraulic turbines.
- CO6 - Predict the performance of prototype with dimensional analysis.

Agenda for the BOS Meeting:

Subject Matter Expert Review and Comments on the syllabus

The BOS meeting has been convened on 15-12-2018 to review the new courses for the newly proposed program B.E Mechatronics engineering which was implemented for the Academic Year 2018-19.

- Dr. S. Sivasaravanan proposed a new course entitled **Digital Electronics** based on the futuristic requirements for the students. The curriculum consists of various engineering discipline to promote inter disciplinary innovate thinking in students. The students will be able to design various combinational, sequential circuits and develop digital system designs using. The students will create simulation models using VHDL software. The backdrop in introducing such courses is to promote collaborative research among the students leading to novel ideas in the field of digital electronics. The students will be able to select the appropriate memory devices and develop digital circuits for real time applications.

- Dr. N. Ganesh Kumar, Associate Professor from PSG Tech welcomed the idea of introducing **Digital Electronics** course in the first year (second semester) saying that Sathyabama Institute of science and technology would be the pioneer in introducing **Digital Electronics** in the Mechatronics curriculum.
- Dr. L. Vijayaraghavan, Professor from IIT Madras, Chennai and Dr. N. Ganesh Kumar, Associate Professor from PSG Tech (External BOS members) reviewed the course. The Board members appreciated the inclusion of the new course **Digital Electronics** in 2018 Regulation.
- **New Course Entitled Digital Electronics**

SMR1101 DIGITAL ELECTRONICS

L T P Credits Total Marks

3 0 0 3 100

COURSE OBJECTIVES

On completion of this course the student will recognize

- Acquire knowledge about the Digital Design
- Acquire knowledge about Classifications and Characteristics of Memory
- Acquire knowledge about Simulation

UNIT 1 FUNDAMENTALS OF DIGITAL DESIGN

9Hrs.

Logic Gates: Basic gates, Universal gates, Sum of products and products of sum, minimization with Karnaugh Map (upto four variables) and realization. Logic Families: Types of logic families (TTL and CMOS), characteristic parameters (propagation delays, power dissipation, Noise Margin, Fan-out and Fan-in), transfer characteristics of TTL NAND, Interfacing CMOS to TTL and TTL to CMOS Combinational Circuits using basic gates as well as MSI devices: Half adder, Full adder, Half Subtractor, Full Subtractor, multiplexer, demultiplexer, decoder, Comparator (Multiplexer and demultiplexer gate level up to 4:1). MSI devices IC7483, IC74151, IC74138, IC7485.

UNIT 2 ELEMENTS OF SEQUENTIAL LOGIC DESIGN

9 Hrs.

2.1 Sequential Logic: Latches and Flip-Flops, Conversion of flip flops (timing considerations and metastability are not expected) 2.2 Counters: Asynchronous, Synchronous Counters, Up Down Counters, Mod Counters, Ring Counters Shift Registers, Universal Shift Register

UNIT 3 SEQUENTIAL LOGIC DESIGN

9 Hrs.

Mealy and Moore Machines, clocked synchronous state machine analysis, State reduction techniques and state assignment, Clocked synchronous state machine design. (Complex word problems like traffic light controller etc. are not expected) MSI counters (7490, 74163, 74169) and applications, MSI Shift registers (74194) and their applications.

UNIT 4 MEMORIES AND PROGRAMMABLE LOGIC DEVICES

9 Hrs.

Classification and characteristics of memory: SRAM, DRAM, ROM, PROM, EPROM and FLASH memories 4.2 Concepts of PAL and PLA. Architecture of CPLD and FPGA, Xilinx XC 9500 CPLD Series and Xilinx XC 4000 FPGA Series.

UNIT 5 SIMULATION

9 Hrs.

Functional Simulation, Timing simulation, Logic Synthesis, RTL, VHDL: Data types, Structural Modeling using VHDL, Implementation of basic combinational and sequential Circuits

Max. 45 Hours

COURSE OUTCOME

On completion of the course, student will be able to

CO1 - Examine the structure of number systems and perform the conversion among different number systems

CO2 - Illustrate reduction of logical expressions using boolean algebra, k-map and tabulation method and implement the functions using logic gates

CO3 - Realize combinational circuits for given application

CO4 - Understand the working mechanism and design guidelines of different combinational, sequential circuits and their role in the digital system design.

CO5 - Understand the concepts of simulation model, structural modelling using VHDL

CO6 - Assess the nomenclature and technology in the area of memory devices and apply the memory devices in different types of digital circuits for real world application.

Agenda for the BOS Meeting:

Newly proposed programs – B.E Mechatronics Engineering – Expert Review and Comments on the syllabus

The BOS meeting has been convened on 04th June 2018 to frame the new curriculum and syllabi for the newly proposed program B.E Mechatronics Engineering implemented for the Academic Year 2018-19

- Dr. S. Prakash (Dean and Professor) session chair started the meeting briefing the programmes offered in the Institution. He enumerated the process of framing the syllabus for the new programme B.E Mechatronics Engineering based on the industrial needs and recent advancement in automation sector before the panel for approval.
- The new syllabus for a total of 43 Theory papers and 15 Practical papers was discussed in the meeting.
- The credited assigned for Theory, Practical, Professional Training and Project work has been prepared and submitted as follows
 - ♦ **Lecture Hours (Theory)** : 1 credit per lecture hour per week, 1credit per tutorial hour per week,
 - ♦ **Laboratory Hours** : 1 credit for 2 Practical hours, 2 credits for 3or 4 hours of practical's per week.

- ◆ **Project Work** : 1 credit for 2 hours of project work per week
 - ◆ **Professional Training** : 5 credits for minimum of 3 weeks of training during summer vacations
- The Chair clearly explained the split up of Internal (50) and External (50) weightage to the members of the board. The Internal marks includes the Continuous Assessment Exam (CAE) 1 (Unit 1, 2), CAE 2 (Unit 3, 4), Assignments (Unit 5). The End Semester Exam (ESE) will be carried out for 100 marks.
 - Dr. L. Vijayaraghavan External BoS member reviewed the curriculum and glanced the content of the syllabus in which the changes were incorporated as per his suggestions.
 - The content of syllabus for each courses were discussed in the meeting considering the prerequisite knowledge, references of syllabi followed in other premier Universities and feedback obtained from various stakeholders as per the emerging trends and technologies.
 - Dr. N. Ganesh Kumar, External BoS member suggested few textbooks and reference books along with existing list of books.
 - The Members of the Board approved the new programme B.E Mechatronics Engineering for the Academic Year 2018-2019
 - **New Program Detailed Curriculum Entitled BE – Mechatronics Engineering**
