Basic Life Support

CONTENT:

The purpose of basic life support (BLS) is to maintain adequate circulation and ventilation until action can be taken to reverse the underlying cause of the cardio and respiratory arrest. Failure of circulation for 3-4 minutes (less if the patient is hypoxemic initially) will lead to irreversible cerebral damage. CPR (Cardio Pulmonary Resuscitation) also enhances the circulation to the brain so CPR is better termed CPR (Cardio Pulmonary Cerebral Resuscitation). Any delay in starting BLS will reduce the chances of a successful outcome. The chances of survival are much greater in Early recognition of sudden cardiac arrest, Early CPR, Early Defibrillation, Early Advanced care and Post Resuscitation Care.
