Course Name	**Data Structures using c and C++**
Course Code	**SVAC1013**
Duration	**30 Hours**

COURSE OBJECTIVES

- To acquire knowledge of organizing the data in nonlinear fashion.
- To get the idea of balancing the height of trees to optimize the structure and search time.
- To learn the process of establishing the network with various nodes with minimum cost & finding the shortest path.
- To understand the method of designing the table data structure and its applications.

COURSE OUTCOMES

On completion of the course, student will be able to

1. Design and implement the various non-linear data structures and perform the intended operations.
2. Understand the strength of balancing the height of the trees.
3. Analyze the time complexity of various non linear data structures.

4. Apply the algorithms to find the shortest path & to connect the nodes with minimum cost.
5. Design the table and applying the table for many applications.
6. Compare and identify the usage of different data structures

BASIC TREE CONCEPTS

Trees- Ordinary and Binary trees terminology, Properties of Binary trees, Implementation using Array and Linked list - Binary tree ADT representations, recursive and non-recursive traversals - Binary Search Tree - Insertion and Deletion.

ADVANCED TREE CONCEPTS

Modules

Week	Time	Topic
Week 1	6hrs	Classification of aerospace materials.
Week 2	6 hrs	Aluminum and aluminum alloys
Week 3	6 hrs	Titanium and titanium alloys.
Week 4	6 hrs	High strength steels.
Week 5	6 hrs	Powder materials

Week 1 Module 1. Classification of aerospace materials

This module will introduce you to the classification of aerospace materials. You will learn about the requirements for these materials. Technologies always affect the structure and properties of materials. You will learn about the main forming technologies (metal forming, hot and cold working, and machining) and their effects on the structure of aerospace materials. Phenomena that accompany the machining operations will be examined as well.

Week 2 Module 2. Aluminum and aluminum alloys

This module will introduce you to aluminum alloys, which are crucial aerospace materials. Aluminum alloys were the first to be used in the manufacture of aircraft. The use of aluminum in revolutionized the aircraft industry. Its advantages are high manufacturability and specific strength (the ratio of maximum stresses to weight). We will study various classifications and designations of aluminum alloys as well as the basics of heat treatment. We will learn how alloying elements affect the structure and properties of aluminum alloys.

Week 3 Module 3. Titanium And Titanium Alloys

We will learn about the role of titanium in the aircraft industry, its advantages and disadvantages for aerospace applications, the structure and properties of titanium alloys. We will examine promising titanium aluminides and shape-memory titanium alloys.Titanium alloys have unique properties and are very promising as aerospace materials Titanium alloys are used in heavily loaded airframe sections, undercarriage parts, skins to high Mach speed aircraft, jet engines, and many other aircraft components requiring high strength, fracture toughness and resistance to fatigue, creep and corrosion. These mechanical properties are superior to lightweight structural materials, including aluminum alloys and magnesium alloys.

Week 4 Module 4. High strength steels

This module will introduce you to high strength steels. Steel is used as an aerospace material, but to a lesser extent than titanium, aluminum, and composites. High strength steel cannot be replaced with other materials. Advantages of using steel in highly-loaded aircraft structures include high stiffness, strength, fatigue resistance and fracture toughness. In this part of the video course, we will deal with steels used in landing gear and other high-strength components, namely: maraging steels, medium-carbon low-alloy steels, and stainless steels.

Week 5 Module 5. Powder materials

This module will introduce you to powder metal materials and modern technologies used to manufacture them. Powders are used in the manufacture of complex parts or when increased heat resistance is required. "Sweating" highly porous materials are used to prevent icing on aircraft. Metal powder compositions are of particular interest due to the rapid development of additive technologies. You will learn about the requirements for powders used in additive manufacturing.
