DEPARTMENT OF INFORMATION TECHNOLOGY

BONAFIDE CERTIFICATE

This is to certify that this Project Report is the bonafide work of **S.VINITHA** who carried out the project entitled "**PLACEMENT AUTOMATION SYSTEM**" under my supervision from August 2021 to November 2021.

Internal Guide

Dr.S.Revathy M.E., Ph.D.,

HEAD OF THE DEPARTMENT

Dr.R.Subhashini M.E., Ph.D.,

Submitted for Vivavoce Examination held on _____

Internal Examiner

External Examiner

(ii)

DECLARATION

I hereby declare that the Project Report entitled "**PLACEMENT AUTOMATION SYSTEM**" done by me under the guidance of Dr.S.Revathy M.E., Ph.D., at Sathyabama Institute of Science and Technology(Deemed to be University), Jeppiaar Nagar, Rajiv Gandhi Salai, Chennai - 600119 is submitted in partial fulfillment of the requirements for the award of Bachelor of Technology degree in Information Technology.

DATE:13-11-2021

S.VINITHA

PLACE: CHENNAI

SIGNATURE OF THE CANDIDATE

(iii)

ACKNOWLEDGEMENT

I am pleased to acknowledge our sincere thanks to Board of management of **SATHYABAMA** for their kind encouragement in doing this project and for completing it successfully. I am grateful to them.

I convey our thanks to **Dr. T. SASIKALA M.E., Ph.D., Dean, School of Computing** and **Dr. R. SUBHASHINI M.E., Ph.D., Head of the Department, Department of Information Technology** for providing us the necessary support and details at the right time during the progressive reviews.

I would like to express our sincere and deep sense of gratitude to our Project **Dr. S. Revathy M.E., Ph.D.**, for his valuable guidance, suggestions and constant encouragement paved way for the successful completion of my project work.

I wish to express our thanks to all Teaching and Non-teaching staff members of the Department of **INFORMATION TECHNOLOGY** who were helpful in many ways for the completion of the project.

COURSECERTIFICATE

This certificate is computer generated and can be verified by scanning the QR code given below. This will display the certificate from the NPTEL repository, <https://npTEL.ac.in/noc/>

Roll No: NPTEL21CS62S14460089

To

ABSTRACT

The project named —**Placement Management System**, a student/company information system is a web based system. The project is developed on the basis of —III Cell being presently used in the University for storing and retrieving the information of students and companies who are registered in III Cell. The III Cell maintains a large database of students wherein all the information of student including the personal records and the academic performance in terms of the SPI and PPI is stored and company information including profile of company, eligibility criteria and facilities it provide etc. The software retrieves this data and displays as per the user requirement. The Placement Management System is developed as an attempt to take a record of company and students by restricting such a large database to that of a particular class of students or company. The System provides the facility of viewing both the personal and academic information of the student and company it can also search for eligible students and company and also insertion and deletion of records by the administrator. Eligible students will receive an email including the details of the company and also they will receive a sms on their registered mobile number in which the date-time and location will be provided.

1 . INTRODUCTION

1.1Introduction of the project

In today's date campus recruitment is common in all colleges yet the drive brings a lot of stress to students as well as placement officers. Various software and other sector companies are conducting campus selections for choosing merit candidates. When campus selections are conducted the students are to submit their details to the concerned placement officer to apply for the hiring process. This routine process is maintained manually, like gathering student details and shortlisting eligible students based on company criteria.

Traditionally, all important information is displayed on the notice board as a result many students are not able to get the information within the time limit. Moreover, students manually submit their details, thus there are chances of errors or students failing to update their information on time. Hence, there is a requirement to computerize the system to reduce the chances of error and provide more efficiency. The admin module plays an important role in our project. They provide validation of students' registration and updating of details. The admin will be able to see the students registered for any particular company and their status.

1.2 Proposed System

The point of the proposed system is to develop a system with enhanced facilities. The proposed system can overcome all the limitation of the existing system, for example, student's data is maintain in the database, it gives more security to information, guarantees information accuracy, decreases paperwork and save time, only eligible students get chance, it makes data to flow efficient and paves way for simple report generation, reduce the space. The proposed system is cost effective.

2.AIM AND SCOPE OF THE PRESENT INVESTIGATION

2.1 Aim and Scope :

It may help collecting perfect management in details. In a very short time, the collection will be obvious, simple and sensible. It will help a person to know the management of passed year perfectly and vividly. It also helps in current all works relative to Placement Management System. It will be also reduced the cost of collecting the management & collection procedure will go on smoothly.

Our project aims at Business process automation, i.e. we have tried to computerize various processes of Placement Management System.

2.2 About the project :

The project is to facilitate students in college, company to register and communicate with placement office. The users can access easily to this and the data can be retrived easily in no time. I the main page there are options for a new register, a registered student to directly login using username and password, submit resume. In the student registration form, we can give personal details, educational qualifications, and professional skills and upload resume. The job details of the placed students will be provided by the administrator. The administrator plays an important role in our project.They provide approval of student registration and uploading. In this project we create a search engine for administrator, who can search everything about the studentand company.

2.3 Objective of the project :

The main objective of the placement management system is to reduce manual work and time. It is difficult and time-consuming to collect all the details from each student. To avoid this problem wehave planned to develop a web-based placement management system.

- Easy to find out the list of eligible students attending the drive
- It manages the details of student records, placement training, different placements happening in and out of the college.

- Saves the time of placement officer and faculties.
- Reduces the manual works.
- This system makes student information more secure.

3.EXPERIMENTAL OR MATERIALS AND METHODS

3.1 Methodology

Placement system provides the modules like

- Student
- Admin
- Company

3.1.1 Student Module:

In this module, creation of student input records about academic career from SSLC, HSC and all semester with facilities to modify the records and viewing changed records. The Student views the company details and verifies particular company details and provides valid details for registration. Student Login: Student Registration: Anjali.V et al, / (IJCSIT) International Journal of Computer Science and Information Technologies, Vol. 7 (2) , 2016, 760-763 www.ijcsit.com 761

3.1.2 Company Module :

The company enrolls themselves and they register their profile and their will marquee in the main page till their drive and view the student's details and update their details. Login Company, registration, students details view New Company Registration:

3.1.3 Admin Module :

The admin is the placement officer who views the students details and company details and post the selected students list. Sending email to student for complete list of information for particular campus. Indication of hall ticket issued to candidates through mail. Login, View company details, View selected students details, Sending mail

3.2 User interface Design :

Features and used specifications

Form based authentication

Databaseconnection

Logging

Bootstrap

3.2.1 Utilities according to specific user :

1. Admin :-

Admin has the supreme power of the application.

Admin provides approval for student and corporate registration.

Admin is responsible for maintaining the whole system

Use search engine for searching any data about student with various filter parameters.

Admin can delete any profile.

Admin can send mail to student and company.

2. Student :-

Student of the college is the user of this application.

New students need to sign up with basic details.

Reregistered student can login using unique username and password.

Student can submit resume and update profile information.

Student can download their profile as PDF format.

3. Company :-

Another type of member of this application.

To communicate with placement officer, company needs to sign up.

After approved by placement officer company can search the all of the students information.

Company can mail to placement officer.

4. Common features :-

Everyone can see some common pages.e.g. statistics.jsp,home.jsp,etc...

Every registered user can change their password and upload new profilr picture.

5. Process of registration for the users :-

A student or company who wants to join the application must have to fill a form for their registration which contains the information of the user.

A unique username password is assigned to every user so that the condition of consistency satisfied. Some options are provided for the user so that they can use the application. They are as follows, Login :- To use the application a user must have to login. When user click on the login option a form containing fields for the username and password appear. The user has to fill the information and if the username and the password are correct then he/she is allowed to use the application. If the username and the password filled by the user is not correct then a notice appear to the user regarding this condition and he/she cannot use the application.

3.3 System architecture :

3.4 Hardware/ Software Requirement:

3.4.1 Hardware Requirement :

Processor - Core i3

Mani Memory - 4 GB RAM

HDD - 80 GB

3.4.2 Software Requirement :

Operating System - Window Server

Database - MYSQL

Platform - PHP

Server - xampp

Browser - Internet Explorer

3.5 System Implementation :

The term Implementation has different meanings ranging from the conversation of a basic application to a complete replacement of a computer system.

- The procedures however, are virtually the same
- Front end: HTML, CSS, JavaScript
- Back end: PHP, MySQL
- Software Requirement : XAMPP Server

4.RESULTS AND DISCUSSION, FUTURE SCOPE

4.1 Result and Discussion :

The development of this project has many new areas of investigation. This project has wide scope to implement it at any University/Institution.

Objectives,

- To provide students ready for industry employment

- To provide Employment opportunities for students
- To provide industry institute interaction

4.2 Future Scope :

The main aim of developing this website was to reduce maximum chances of errors in manual work.

Save time for the process. Also students get notified by the SMS instantly.

Other Features such as giving notifications to students about the jobs that are available both on and off campus can be included in the upgraded versions. The system cannot provide the SMS integration. Hence, it can be modified to give the SMS integration. Other features like analytics can be added in the future to this portal for tracking the progress of student in specific areas. After analysis this system will notify students of the areas they are lacking in.

Limitations of project work :

- Internet is necessary.

5.SUMMARY AND CONCLUSIONS

5.1 Summary & Conclusion :

Our proposed system according to IEEE paper. It can successfully login authorized person to system and register them. In our system admin can check the student list those eligible according to criteria given by the company and notify them instantly and update the information anytime successfully. Our system is Secure and User-friendly for all of three modules.

Increasing need of comfort and inculcating all the data at one place has always been a challenging process for everyday. With the introduction of this web based placement portal we promise to make the lives of students and administration a little easier by proposing an alternative for the current system being used. Easy accessibility and functioning of this portal will allow easy management of the allocation process during placement period. With the increasing demand of digitalization in every aspect of day to day activities we can anticipate the great demand for such portals in the near future and the comfort it will bring with it to the lives of all.
