SIGNATURE OF THE CANDIDATE

ACKNOWLEDGEMENT

I am pleased to acknowledge my sincere thanks to Board of Management of **SATHYABAMA INSTITUTE OF SCIENCE AND TECHNOLOGY** for their kind encouragement in doing this project and for completing it successfully. I am grateful to them.

I convey my thanks to **Dr. T.SASIKALA, M.E., Ph.D., Dean, School of Computing** and **Dr. SUBHASHINI, M.E., Ph.D., Head of the Department, Dept. of Information Technology** for providing me necessary support and details at the right time during the progressive reviews.

I would like to express my sincere and deep sense of gratitude to my Project Guide **Dr. JEBERSON RETNA RAJ, M.E., Ph.D.,** for her valuable guidance, suggestions and constant encouragement paved way for the successful completion of my project work.

I wish to express my thanks to all Teaching and Non-teaching staff members of the **Department OF INFORMATION TECHNOLOGY** who were helpful in many ways for the completion of the project.

TRAINING CERTIFICATE

ABSTRACT

TICKETS READY is software you can use for managing reservations for your service. Be it a pool, fitness center, gym, yoga studio, or a parks & recreation center an Online Reservation System allows all kinds of service businesses to accept bookings and appointments online and manage their phone and in-person bookings with ease.

Basically, an online reservation system allows a potential customer to book and pay for a service directly through a website. That means from the moment a customer decides they want to book a slot for your service (be it an in-house class or online appointment) to choosing a date, picking a time, and paying for the booking, membership management, everything is handled online! It greatly reduces your workload and removes the opportunity for double-bookings.

We now live in a world where almost everything is practically inseparable from the internet, businesses topping the list. It's now crucial that every business has a recognizable online presence, no matter its sector. Not only does modern technology help businesses get found online, but it also helps them easily convert visits into revenue through an online reservation system.

TICKETS READY – An Online Ticket Reservation App helps you in increasing booking, saves time, increases efficiency of operations etc. In this app once the user gets started, the user have to select their schedule of journey (boarding, destination and date of journey). Then the next step is to select the type of accommodation according to the feasibility and enter the passenger count. Followed by passenger information where the user has to enter the details of the person who booked tickets and details of the passengers. The last step is the ticket generation i.e. the entire travel journey with all the above entered details will be generated.

There exists a separate portal for admin where he/she can login with their respective username and password. After login, the admin can search passengers, control the booked passengers i.e. he/she can decline their tickets and provide refund. The admin can accept the passenger payment and give them concession and can check the transaction history.

Overall, TICKETS READY is a very helpful app in booking tickets in a reasonable price!!

INTRODUCTION

What is Online Ticket Reservation?

An online reservation system allows a potential customer to book and pay for a service directly through a website. That means from the moment a customer decides they want to book a slot for your service (be it an in-house class or online appointment) to choosing a date, picking a time, and paying for the booking, membership management, everything is handled online! It greatly reduces the workload on your staff and removes the opportunity for double-bookings.

Here are the reasons why you should consider putting an online booking system for your service business in place:

- **It increases bookings:**

One of the most significant benefits of an online reservation system is that they are always open for business. You can accept bookings 24/7, so your customers don't have to wait until the next day to make a reservation or worse, turn to one of your competitors. Clients have the convenience to book when it's right for them, and you collect bookings while you sleep. Plus, bookings can be made at their own convenience from the comfort of their home. Eliminate the need to call up the facility to ask for details or go to one and struggle to find a suitable slot to book. Your business can keep its calendars full throughout the year!

- **It saves time:**

Online reservation system helps you do more with less by delegating the booking-related tasks to an automated platform. A reservation system enables you to automate notifications to your clients. Once you have your business set up on the platform, you won't have to call your guests for reminders or send follow-up emails, which also means a drastic reduction of no-shows, and you don't lose out on your income! All of this runs in the background, so you and your staff can focus on providing the best experience to your clients.

- **It puts you ahead of your competition:**

There's a multitude of businesses out there who have a website and are listed on Google, but only a few have an online booking system in place. By having an online reservation system, you're one step ahead of the game, tipping the scales in your favor when prospects research and compare your capabilities against your competitors.

- **It increases efficiency of operations:**

Customers today expect instant gratification, and an online reservation system can help you provide it. Nobody in this day and age has the patience to wait at the front desk! Booking software can help you manage your waitlist. No more long queues at the front desk or having to say "one moment" to a customer waiting for you to get off the phone again! Avoid confusions that come with bookings, and automate everything with booking software with a waitlist management feature.

Role of HTML, CSS, Php & MYSQL:

- A webpage can contain headings, paragraphs, images, videos, and many other types of data. Front end developers use the HTML element to specify what kind of information each item on a webpage contains — for instance, the “p” HTML element indicates a paragraph. Developers also write HTML language code to specify how different items relate to one another in the page’s overall structure or document structure.
- CSS is used for defining the styles for web pages. It describes the look and formatting of a document which is written in a markup language. It provides an additional feature to HTML. ... CSS helps us to control the text color, font style, the spacing between paragraphs, sizing of columns, layout designs, and many more. CSS provides these capabilities through a technical model based on a hierarchical scope of effect, the separation of style from content, and a well-defined set of published standards.
- PHP (Hypertext Preprocessor) is known as a general-purpose scripting language that can be used to develop dynamic and interactive websites. It was among the first server-side languages that could be embedded into HTML, making it easier to add functionality to web pages without needing to call external files for data.
- MYSQL database helps to automate data retrieving and provide great support in PHP MYSQL web application development.

Requirements of Application:

- Create a workspace with VS Code
- Design the general layout with HTML & CSS
- Create the required components with PHP.
- A database should be made in MYSQL for the backend purpose.
- Instead of changing in code, admin can make changes in the database, so that the change gets reflected in the website also.

TICKETS READY – AN ONLINE TICKET RESERVATION APP

Overview:

This project aims to maintain the information about the passengers those who are in need of booking train ticket. It will help the busy passengers to save their time and energy. Admin will be able to login themselves and search data of the passengers using the search bar and for the admin purpose, transactions and reserved passengers control will be also available.

Only admin will be able to update passengers information. There are many components like schedule, accommodation etc. Once passenger gets started, they will be directed to various fields and finally the booking will be done. This app is done with HTML, CSS, Php and MYSQL.

The Tickets Ready App will be very easy and a delicate for the passengers to book their schedule. Now a days, internet is the most widely used network in modern world and no one is preferring to go out and booking their tickets. For their easy purpose, Tickets Ready app is made, so that users can book by sitting in their home itself.

Functional Requirements:

To build this application, the main thing needed is the components where are those booking process occur. The components used in this application are listed below:

COMPONENTS:

- ❖ Home
- ❖ About Us
- ❖ Contact Us
- ❖ Services
- ❖ Login (for admin purpose)
 - Reserved User Control
 - Accept Payment
 - Transactions
- ❖ Schedule
- ❖ Accommodation
- ❖ Passenger Info
- ❖ Payment Info

OVERVIEW OF COMPONENTS:

- **Home Page:**

The home page is the first page of this application, from where we can initialize our booking process.

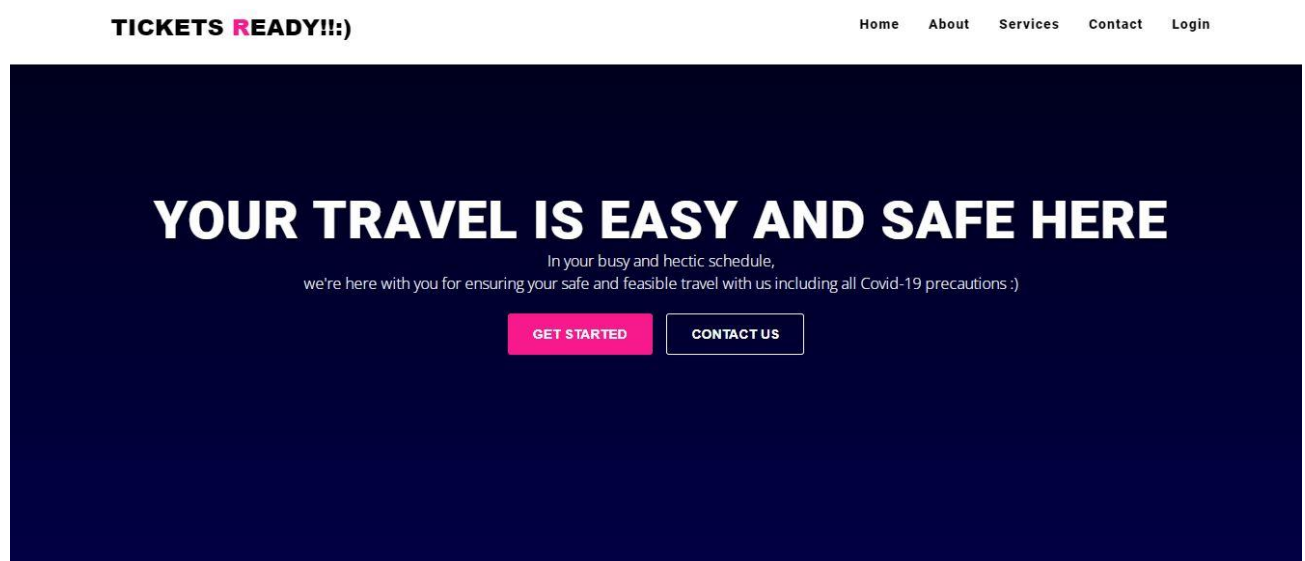

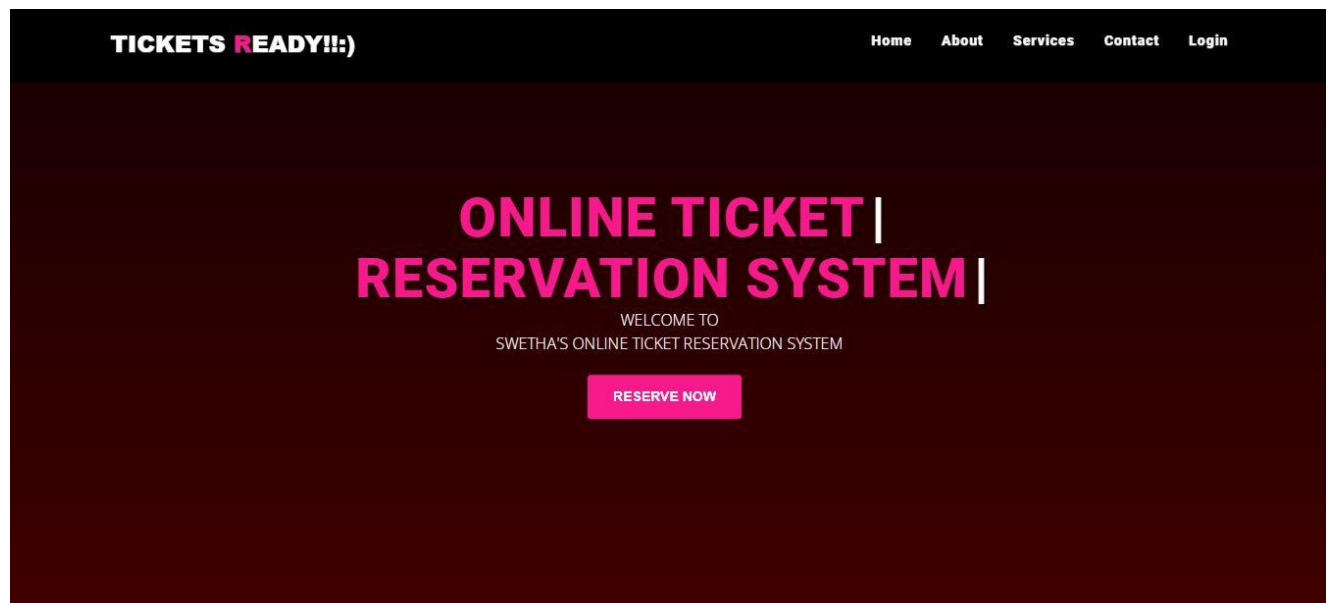

Fig 1.1: Home Page

- **About Us Page:**

This page contains the information about the tickets ready application, so that the passengers can have a better knowledge about this app.

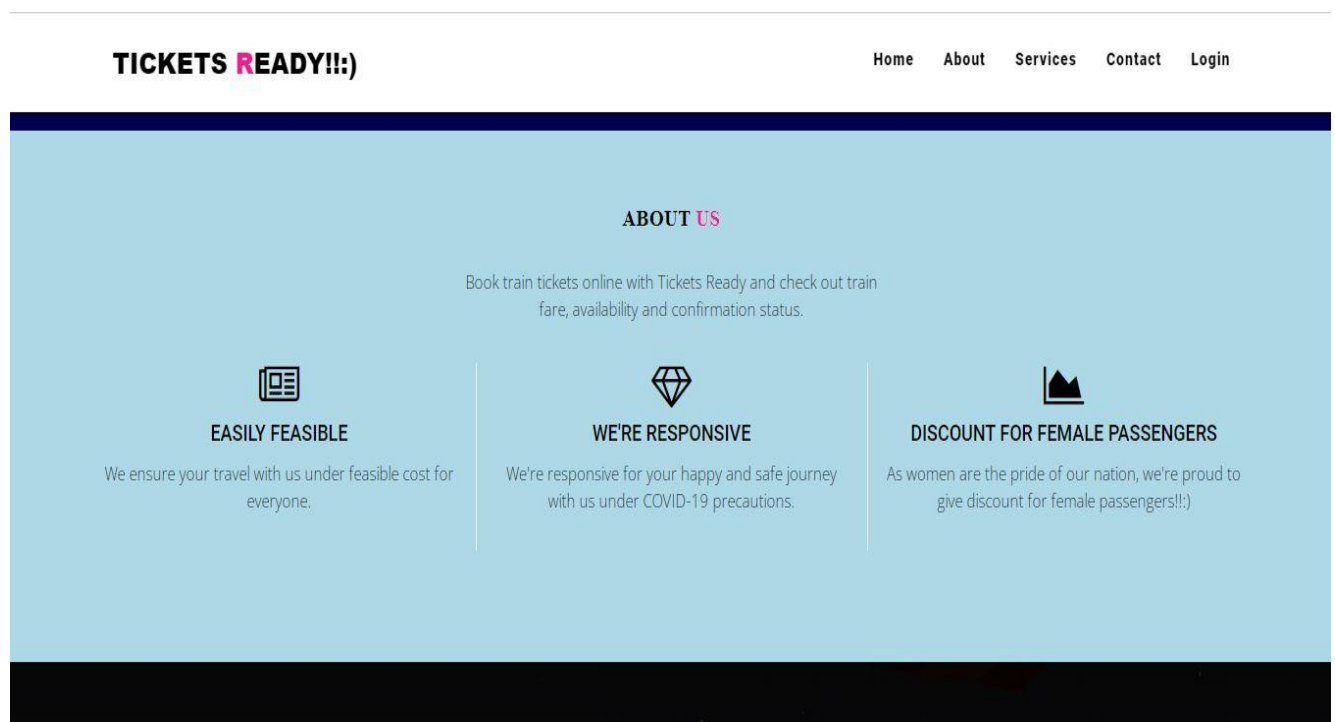

Fig 1.2: About Us Page

- **Contact Us page:**

In contact page, the passengers can contact the authorities of tickets ready app in order to get any help or any technical issues in the application. The authorities will give a clear solution for the problem.

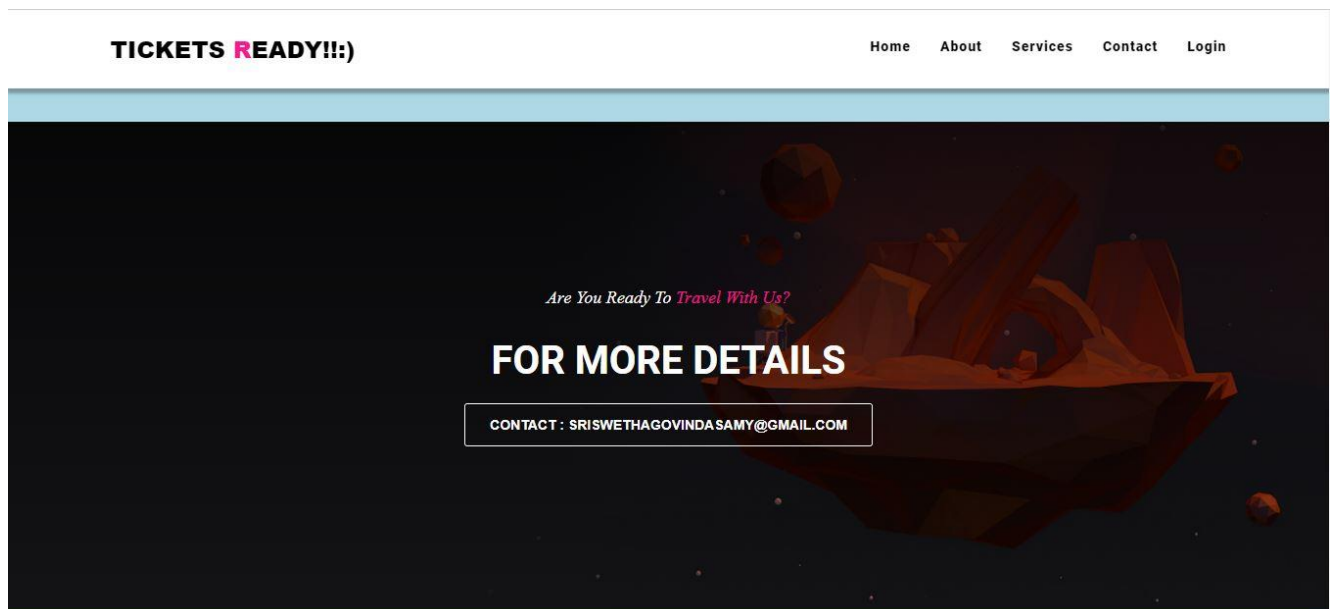

Fig 1.3: Contact Us Page

- **Services Page:**

This page gives the information about the other featured services that are offered by this application. The passengers can also make use of those extra features, but the main one is for booking tickets.

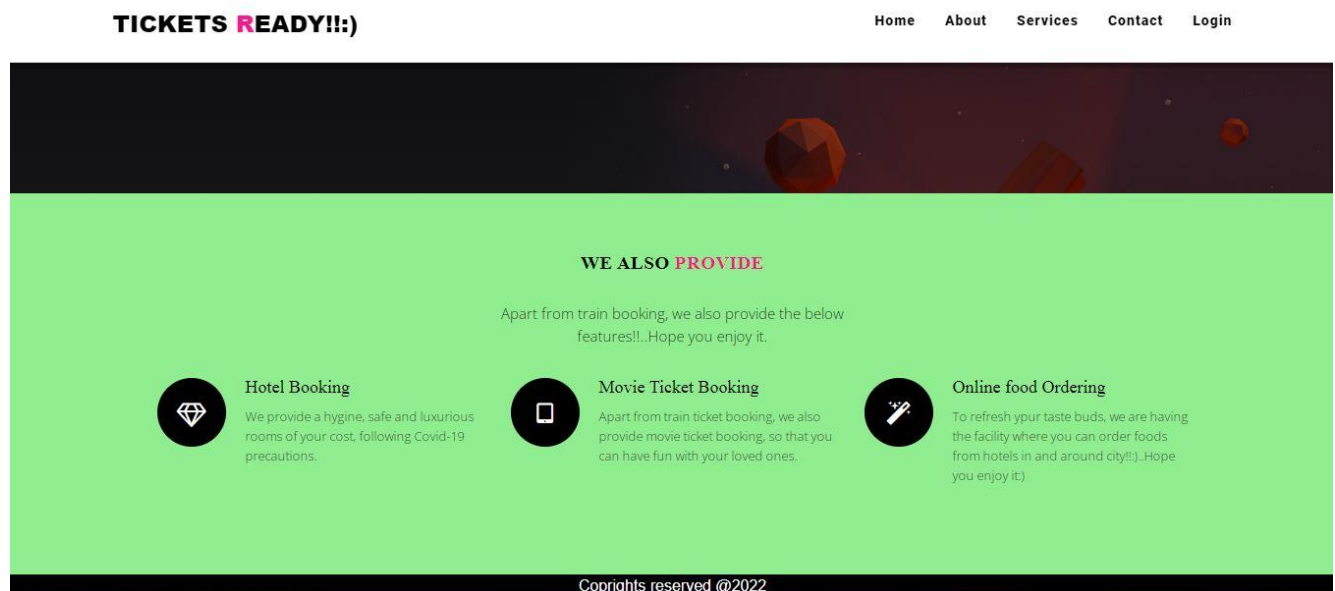

Fig 1.4: Services Page

- **Schedule Page:**

In this page, the passenger should enter the boarding point, destination point and the date of journey. This page is for selecting the schedule of the journey.

The screenshot shows a web interface for a booking process. At the top, there is a dark navigation bar with three links: "Enter the details", "Reserve here" (with a right-pointing arrow), and "Back To Home" (with a left-pointing arrow). Below this bar, a light green banner contains the text "YOUR BOOKING PROCESS STARTS HERE". Underneath the banner, there are four colored boxes representing the booking steps: 1. SCHEDULE (with a checkmark icon), 2. ACCOMODATION (with a blue background), 3. PASSENGER INFO (with a green background), and 4. PAYMENT INFO (with a yellow background). Each box has a sub-label: "SCHEDULE OF TRAVEL", "ACCOMODATION TYPE", "PASSENGER DETAILS", and "TOTAL PAYMENT" respectively. The "1. SCHEDULE" box is currently active. Below these boxes, there is a white form titled "YOUR SCHEDULE". The form contains three input fields: "Boarding:" with a dropdown menu showing "Tiruchirapalli", "Destination:" with a dropdown menu showing "Dindigul", and "Departure Date:" with a date input showing "13-04-2022" and a calendar icon. At the bottom of the form is a green button labeled "NEXT" with a right-pointing arrow.

Fig 1.5: Schedule Page

- **Accommodation Page:**

This page is for passengers to select their class of seating based on number of slots available and fare of ticket. Here the number of passengers should be entered.

Fig 1.8: Payment Info Page

- **Login (for admin purpose):**

This page is for the admin purpose where admin can control all the booked passengers list and control the transactions by declining ticket or by giving concession for the passengers and provide refund to passengers who booked and cancelled their ticket.

The screenshot shows the 'Please Login Here' form. It has a header bar with 'Online Ticketing' on the left and 'Return Home' on the right. The login form itself has a green header 'Please Login Here'. It contains two input fields: 'Username:' with 'admin' entered and 'Password:' with '.....' entered. Below these is a checkbox for 'Remember me' and a 'Login' button with a checkmark icon.

Fig 1.9: Login Page

1. Reserved User Page:

This page contains the list of all passengers booked the ticket using this app. Admin can control the list.

The screenshot shows the 'Reserved User Page' with a table of booked tickets. The table has columns: Book ID, Book By, Contact, Address, Departure Date, and Action. There are two rows of data. The 'Action' column contains 'Cancel' and 'Accept Payment' buttons for each row.

Book ID	Book By	Contact	Address	Departure Date	Action
6242a502705c7	Swetha	9788562146	Dgl	2022-05-30	<button>Cancel</button> <button>Accept Payment</button>
6242bca59044	Swetha	9790133966	RM Colony 10th Cross Dindigul-1	2022-04-13	<button>Cancel</button> <button>Accept Payment</button>

Showing 1 to 2 of 2 entries

Fig 1.9.1: Reserved User Page

2. Accept Payment Page:

In this page, admin can accept the payment from the passengers as per the wish.

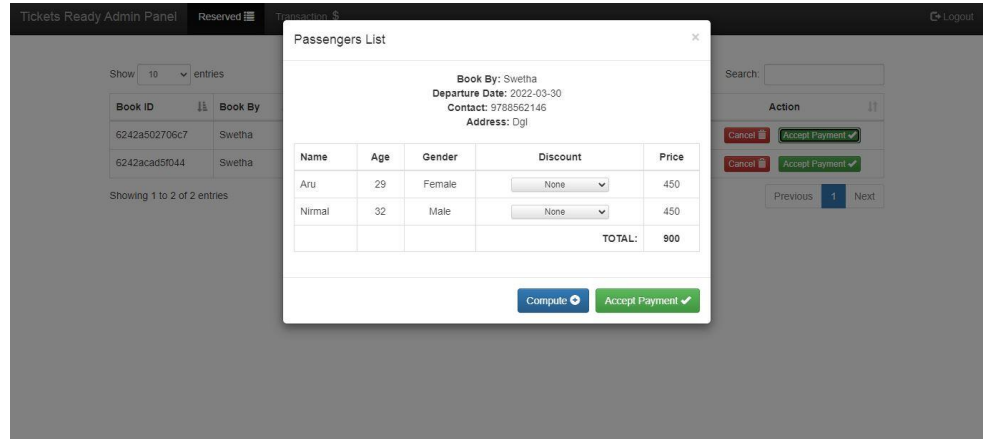

Fig 1.9.2: Accept Payment Page

3. Transactions Page:

In this page, admin can control the transactions by giving concession to the passengers by percentage basis.

Fig 1.9.3: Transactions Page

- **BACKEND:**

The backend duties involve the MYSQL connection and a service. For the backend actions, a php document is done in backend and thereby the MYSQL database is connected to the application.

For this to be carried out first of all a mysql database should be created and thereby it should be connected with backend through the php code via connection link.

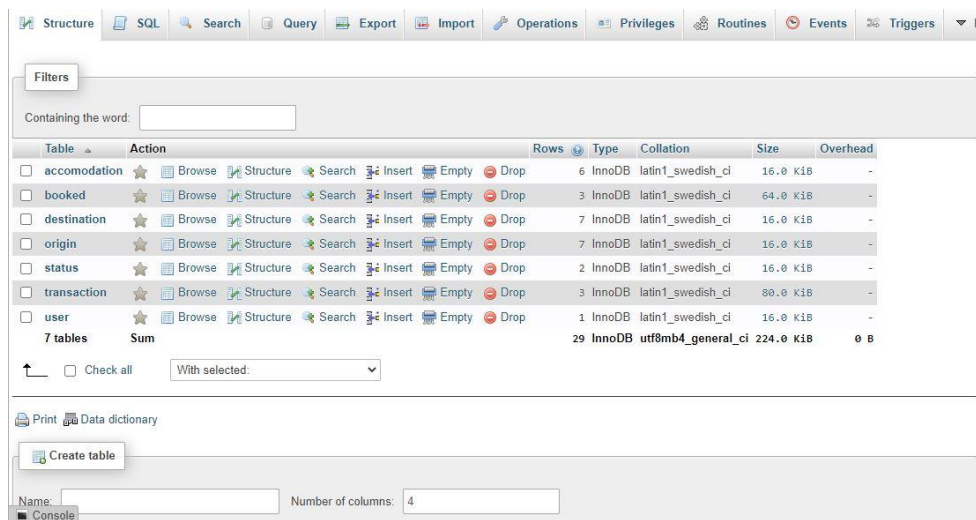

Fig 2: MYSQL Connection

SUMMARY AND CONCLUSIONS

- **SUMMARY:**

- This “Tickets Ready” app helps in booking your tickets in a quick manner and in affordable price for all people in the society.
- In this busy and hectic world, one cannot go to the booking office to book tickets and it’s a waste of time for people who are running to earn money.
- This app helps in a very good manner for those people and for female passengers it’s a very good advantage to get concession in ticket fare.
- The code is done from the scratch and the layout is made. The data is passed through database and collected in mysql. This will be more helpful in booking!!!

- **CONCLUSION:**

- The front-end languages such as HTML, CSS are becoming one among the emerging languages.
- This website is connected to backend and thus collecting the total details about the journey becomes very easy.
- In today’s world, the web development technology is an emerging technique which helps in many real time applications and saves people time and efforts.

B. SCREENSHOTS

The screenshot displays a database management interface. At the top is a menu bar with options: Structure, SQL, Search, Query, Export, Import, Operations, Privileges, Routines, Events, and Triggers. Below the menu is a 'Filters' section with a text input field labeled 'Containing the word:'. The main area shows a table list with columns: Table, Action, Rows, Type, Collation, Size, and Overhead. The table list includes seven tables: accomodation, booked, destination, origin, status, transaction, and user. Each table has a set of actions (Browse, Structure, Search, Insert, Empty, Drop) and associated icons. A summary row at the bottom indicates '7 tables' and a 'Sum' of 29 rows, InnoDB engine, utf8mb4_general_ci collation, and a size of 224.0 KiB. Below the table list is a 'Check all' checkbox and a 'With selected:' dropdown. At the bottom, there is a 'Print' button, a 'Data dictionary' link, and a 'Create table' button. The 'Create table' dialog is open, showing a 'Name:' field and a 'Number of columns:' field set to 4. A 'Console' tab is visible at the bottom left.

Table	Action	Rows	Type	Collation	Size	Overhead
☐ accomodation		6	InnoDB	latin1_swedish_ci	16.0 KiB	-
☐ booked		3	InnoDB	latin1_swedish_ci	64.0 KiB	-
☐ destination		7	InnoDB	latin1_swedish_ci	16.0 KiB	-
☐ origin		7	InnoDB	latin1_swedish_ci	16.0 KiB	-
☐ status		2	InnoDB	latin1_swedish_ci	16.0 KiB	-
☐ transaction		3	InnoDB	latin1_swedish_ci	80.0 KiB	-
☐ user		1	InnoDB	latin1_swedish_ci	16.0 KiB	-
7 tables	Sum	29	InnoDB	utf8mb4_general_ci	224.0 KiB	0 B
