SIGNATURE OF THE CANDIDATE

ACKNOWLEDGEMENT

I am pleased to acknowledge my sincere thanks to Board of Management of **SATHYABAMA INSTITUTE OF SCIENCE AND TECHNOLOGY** for their kind encouragement in doing this project and for completing it successfully. I am grateful to them.

I convey my thanks to **Dr. T.SASIKALA, M.E., Ph.D., Dean, School of Computing** and **Dr. SUBHASHINI, M.E., Ph.D., Head of the Department, Dept. of Information Technology** for providing me necessary support and details at the right time during the progressive reviews.

I would like to express my sincere and deep sense of gratitude to my Project Guide **Dr. P.JEYANTHI, M.E., Ph.D.,** for her valuable guidance, suggestions and constant encouragement paved way for the successful completion of my project work.

I wish to express my thanks to all Teaching and Non-teaching staff members of the **Department OF INFORMATION TECHNOLOGY** who were helpful in many ways for the completion of the project.

ABSTRACT

- E-commerce is fast gaining ground as an accepted and used business paradigm. More and more business houses are implementing web sites providing functionality for performing commercial transactions over the web. It is reasonable to say that the process of shopping on the web is becoming commonplace. In this project we are going to host the FASHION BOTIQUE webpage using s3 aws cloud computing. The objective is to build a web application that connects the info to E-commerce(FASHION BOTIQUE). The objective of this project is to develop a general purpose e-commerce store where product like clothes can be bought from the comfort of home through the Internet.

CHAPTER:1: INTRODUCTION:

1.1)What is cloud computing?

Cloud Computing is a form of distributed computing which has been evolving recently. Typically, the cloud symbol is used to represent the Internet. Cloud computing is now widely used to describe the delivery of software, infrastructure and storage services over the internet. Cloud computing provides tools and technologies for various parallel applications with far more affordable prices compared to traditional parallel computing techniques. The main purpose of cloud computing is to profit from all of these technologies without the necessity for deep knowledge or expertise with each of them. At present, whether large or small, all companies depend on public cloud platforms to host and implement applications because they supply flexibility, mobility, scalability, sustainability and it is cost-effective.

Cloud Computing Service Models can be mainly placed into three types:

SaaS (Software as a Service), IaaS (Infrastructure as a Service) and PaaS (Platform as a Service). Each of the cloud models has its collection of benefits that will meet the wants of assorted companies.

- a) **Software as a Service (SaaS):** Software as a Service (SaaS) is a software distribution model in which applications are hosted by a third-party provider and made available to users over the Internet. The SaaS model enables your business to quickly access cloud-based web applications without committing to install a new infrastructure. Applications run on the vendor cloud, which they can control and maintain. On-site hardware is not required for this model, which keeps associated costs low. This reduces the expense of equipment procurement, delivery and servicing, as well as software licensing, deployment and service. Small businesses may find this cloud platform particularly attractive.
- b) **Infrastructure as a Service (IaaS):** Infrastructure as a service (IaaS) is a type of cloud computing that delivers basic computing, networking, and storage services to customers on-demand, over the Internet. IaaS allows end-users to scale up and reduce resources on an as-needed basis. Infrastructure as a Service (IaaS) is often referred to as Hardware as a Service (HaaS). IaaS was born out of a wider shift from conventional data centres to virtualized and cloud-based infrastructure. The on-demand service model makes it easy for the user to transfer workloads from one cloud instance to another, ensuring that resources are still available when you need them. IaaS providers offer services on a pay-as-you-use basis. Users are expected to pay for what they have been using.
- c) **Platform as a Service (PaaS):** Platform as a Service (PaaS) is a full cloud-based development and delivery environment with tools that allow you to deliver anything from simple cloud-based apps to sophisticated cloud-enabled enterprise applications. User can buy the services from a cloud service provider on a pay-as-you-use basis and access them through the Internet. PaaS vendors sell a spread of tools that are mainly required for software development, including a source code editor, a debugger, a compiler, and other critical tools. Such methods can be provided together as a platform. PaaS offers all the skills you need to support a full lifecycle of web applications that are designing, reviewing, deploying, managing and upgrading within the same integrated environment.

1.2)Role of HTML, CSS :

- A webpage can contain headings, paragraphs, images, videos, and many other types of data. Front end developers use the HTML element to specify what kind of information each item on a webpage contains — for instance, the “p” HTML element indicates a paragraph. Developers also write HTML language code to specify how different items relate to one another in the page’s overall structure or document structure.
 - HTML is the language for describing the structure of Web pages. HTML gives authors the means to:
 - Publish online documents with headings, text, tables, lists, photos, etc.
 - Retrieve online information via hypertext links, at the click of a button.
 - Design forms for conducting transactions with remote services, for use in searching for information, making reservations, ordering products, etc.
 - Include spread-sheets, video clips, sound clips, and other applications directly in their documents.
- With HTML, authors describe the structure of pages using *markup*. The *elements* of the language label pieces of content such as “paragraph,” “list,” “table,” and so on
- CSS is used for defining the styles for web pages. It describes the look and formatting of a document which is written in a markup language. It provides an additional feature to HTML. ... CSS helps us to control the text color, font style, the spacing between paragraphs, sizing of columns, layout designs, and many more. CSS provides these capabilities through a technical model based on a hierarchical scope of effect, the separation of style from content, and a well-defined set of published standards.

1.3)SYSTEM SPECIFICATION :

HARDWARE SPECIFICATION:

Processor	:Processor Intel CORE i3 and above
Internet Connection	: Existing telephone lines, Data card, Fiber net
RAM	:4 GB

SOFTWARE SPECIFICATION

Operating System	:	Windows, Mac, Linux
Language	:	HTML,CSS
GUI	:	VS Studio

Modules, components and services are classes that use *decorators*. These decorators mark their type and provide metadata.

- The metadata for a component class associates it with a *template* that defines a view. A template combines ordinary HTML and CSS code to display the webpage
- Create components and make their layout with HTML, CSS
- Create account in aws cloud and sign in
- Select s3 storage and create bucket
- Upload the files and folders in the bucket
- Make the actions as make public via ACL
- Enable the static website hosting.

CHAPTER 2: E-COMMERCE WEBPAGE

2.1)Overview:

E-commerce is fast gaining ground as an accepted and used business paradigm. More and more business houses are implementing web sites providing functionality for performing commercial transactions over the web. It is reasonable to say that the process of shopping on the web is becoming commonplace.

Anyone can open the webpage. There are many components like products,account,cart,contact,about us etc. Once the customer opens the webpage they can view all the products. This webpage is done with HTML and CSS

The objective of this project is to develop a general purpose e-commerce store where product like clothes can be bought from the comfort of home through the Internet. Now a days, internet is the most widely used network in modern world and no one is preferring to go out . For their easy purpose, this webpage was created, so that users can buy their products by sitting in their home itself.

2.2)Functional Requirements:

To build an e-commerce webpage, the main thing needed is the components where are those application process occurs. The components used in this application are listed below:

2.3)COMPONENTS:

- ❖ Home
- ❖ Products
- ❖ About Us
- ❖ Contacts
- ❖ Cart
- ❖ Account
 - Login
 - Sign up

2.4)OVERVIEW OF COMPONENTS:

- **HOME PAGE:**

→The Home Screen will consist of screen were one can browse through the products which we have on our website.
It also contains the customer feedbacks

Fig 1.1:HOME PAGE

Fig 1.1.1:HOME

PRODUCTS:

→ This page consists of product details. This page appears same for both visitors and users

Fig 1.2: Product Page

Fig 1.2.1: Product Page

- **ABOUT US:**

→ This page describes about website and owners.

Fig 1.3: About Us Page

Contact us:

→ Visitors and Registered users can contact website owners or administrators from here

Fig 1.4: Contact Us Page

Account:

→ This page consist log in and sign up page

Fig 1.5: Account page

Cart page:.

→ This page contains selected products of customer

Product

Product	Quantity	Sub Total
 Cavaliers SweatShirt by Nike Rs.3695 Remove	1	Rs.3695
 Harmon kardon Headphones Rs.14990 Remove	1	Rs.14990
 Fossil Smart Watch Rs.14296 Remove	1	Rs.14296
 Access Her Necklace Rs.39500 Remove	1	Rs.39500
 The Light Lamp Rs.21200 Remove	1	Rs.21200

Fig 1.6: Cart page

Feedback page:

→ This page contains the feedback of customers in footer of home page

Fig 1.7: Feedback page

CHAPTER -3:SUMMARY AND CONCLUSIONS

3.1)SUMMARY:

- This E-commerce webpage helps many people to scroll and feed many variety of products by sitting in home . Now a days in the modern lifestyle, problems related to health issues arises which makes the people hospitalize and they can't go outside. So these e-commerce pages are very usefull to them, Therefore "E-Commerce webpage(FASHION BOTIQUE)"is created in which the delivery will be done in fast manner and in an affordable prices.This webpage is a e-commerce web page build with HTML and CSS and hosted in AWS cloud service. The created link is:

<http://fashionbotique.s3-website.us-east-2.amazonaws.com>

3.2)CONCLUSION:

- With the steps shown in the above section, we can make different static applications that helps in the modern technology.
- AWS Cloud service makes the building of webpage easier as compare to others.
- This project helps in understanding the creation of an interactive web page and the technologies used to implement it.
- Thus, using cloud computing technology in E-Commerce system is the most efficient, cost-saving, time-saving and serializable technique.

B.Screenshots:

Aws bucket :

The screenshots show the Amazon S3 console interface for a bucket named 'fashionbotique'. The left sidebar contains navigation options like Buckets, Access Points, Storage Lens, and Feature spotlight. The main content area displays the 'Objects' tab, showing a list of objects stored in the bucket. The objects are listed with their names, types, last modified dates, sizes, and storage classes.
