DECLARATION

I Muskan Firdousi(reg no:38120052) hereby declare that the Project Report entitled “BLOGGER WEBSITE” done by me under the guidance of Dr. Jeberson Retna Raj. R and at Github is submitted in partial fulfillment of the requirements for the award of Bachelor of Technology degree in INFORMATION TECHNOLOGY.

DATE:

PLACE: Chennai

SIGNATURE OF THE CANDIDATE

ACKNOWLEDGEMENT

I am pleased to acknowledge my sincere thanks to the Board of Management of SATHYABAMA for their kind encouragement in doing this project and for completing it successfully. I am grateful to them.

**I convey my thanks to Dr.T.SASIKALA., M.E., Ph.D., Dean, School of Computing
Dr.R.SUBHASHINI M.E, Ph.D., Head of the Department of Information Technology
for providing me necessary support and details at the right time during the
progressive reviews.**

**I would like to express my sincere and deep sense of gratitude to my Project Guide
Dr. Jeberson Retna Raj. R, for her valuable guidance, suggestions, and constant
encouragement that paved way for the successful completion of my project work.**

**I wish to express my thanks to all Teaching and Non-teaching staff members of the
Department of INFORMATION TECHNOLOGY who were helpful in many ways for
the completion of the project.**

ABSTRACT

- A blog (a truncation of "weblog") is a discussion or informational website published on the World Wide Web consisting of discrete, often informal diary-style text entries (posts). Posts are typically displayed in reverse chronological order, so that the most recent post appears first, at the top of the web page. Until 2009, blogs were usually the work of a single individual, occasionally of a small group, and often covered a single subject or topic. In the 2010s, "multi-author blogs" (MABs) emerged, featuring the writing of multiple authors and sometimes professionally edited. MABs from newspapers, other media outlets, universities, think tanks, advocacy groups, and similar institutions account for an increasing quantity of blog traffic. The rise of Twitter and other "microblogging" systems helps integrate MABs and single-author blogs into the news media. *Blog* can also be used as a verb, meaning *to maintain or add content to a blog*.

The emergence and growth of blogs in the late 1990s coincided with the advent of web publishing tools that facilitated the posting of content by non-technical users who did not have much experience with HTML or computer programming. Previously, a knowledge of such technologies as HTML and File Transfer Protocol had been required to publish content on the Web, and early Web users therefore tended to be hackers and computer enthusiasts. In the 2010s, the majority are interactive Web 2.0 websites, allowing visitors to leave online comments, and it is this interactivity that

distinguishes them from other static websites. In that sense, blogging can be seen as a form of social networking service. Indeed, bloggers not only produce content to post on their blogs but also often build social relations with their readers and other bloggers. However, there are high-readership blogs which do not allow comments.

CHAPTER 1

INTRODUCTION

1.1 GENERAL

programming languages are often called programmers or developers. The things we tell software using a programming language is our way of communicating with software. A The people who use language could be to make a webpage look a certain way, or to make an object on the page move if the human user takes a certain action.

Programming, or coding, is like solving a puzzle. Consider a human language, like English or French. We use these languages to turn thoughts and ideas into actions and behavior. In programming, the goal of the puzzle is exactly the same -- you're just driving different kinds of behavior, and the source of that behavior isn't a human. It's a computer.

Programming in Web Development

when a web designer is given an end goal like "create a webpage that has this header, this font, these colors, these pictures, and an animated unicorn walking across the screen when users click on this button," the web designer's job is to

take that big idea and break it apart into tiny pieces, and then translate these pieces into instructions that the computer can understand -- including putting all these instructions in the correct order or syntax.

Every page on the web that you visit is built using a sequence of separate instructions, one after another. Your browser (Chrome, Firefox, Safari, and so on) is a big actor in translating code into something we can see on our screens and even interact with. It can be easy to forget that code without a browser is just a text file -- it's when you put that text file into a *browser* that the magic happens. When you open a web page, your browser fetches the HTML and other programming languages involved and interprets it.

CHAPTER 2

AIM AND SCOPE

2.1 AIM

The main aim of this project is that anyone who loves to write or read blogs can join this website, it's a different way of blogging.

2.2 SCOPE

It's a blogging website where you can read and write blogs. The features which makes it different from other blogging websites is that it feels more like using social media apps like instagram or facebook. You can add any blogger as a friend, and chat with them. You can also add your social media handles for further communication. Based on your

likes and people you follow you will get blogs to read. My website also places blogs according to their category.

CHAPTER 3

SYSTEM ANALYSIS

3.1 GENERAL

3.1.1 HTML, CSS, & JavaScript

An overview:

HTML provides the *basic structure* of sites, which is enhanced and modified by other technologies like CSS and JavaScript.

CSS is used to control *presentation, formatting, and layout*.

JavaScript is used to control the *behavior* of different elements.

Now, let's go over each one individually to help you understand the roles each plays on a website and then we'll cover how they fit together. Let's start with good ol' HTML.

HTML

HTML is at the core of every web page, regardless the complexity of a site or number of technologies involved. It's an essential skill for any web professional. It's the starting point for anyone learning how to create content for the web. And, luckily for us, it's surprisingly easy to learn. HTML stands for HyperText Markup Language. "Markup language" means that, rather than using a programming language to perform functions, HTML uses tags to identify different types of content and the purposes they each serve to the webpage. Using HTML, you can add headings, format paragraphs, control line breaks, make lists, emphasize text, create special characters, insert images, create links, build tables, control some styling, and much more.

CSS

CSS stands for Cascading Style Sheets. This programming language dictates how the HTML elements of a website should actually appear on the frontend of the page. HTML provides the raw tools needed to structure content on a website. CSS, on the other hand, helps to style this content so it appears to the user the way it was intended to be seen. These languages are kept separate to ensure websites are built correctly before they're reformatted. If HTML is the drywall, CSS is the paint.

Whereas HTML was the basic structure of your website, CSS is what gives your entire website its style. Those slick colors, interesting fonts, and background images? All thanks to

CSS. This language affects the entire mood and tone of a web page, making it an incredibly powerful tool -- and an important skill for web developers to learn. It's also what allows websites to adapt to different screen sizes and device types.

CSS is a list of rules that can assign different properties to HTML tags, either specified to single tags, multiple tags, an entire document, or multiple documents. It exists because, as design elements like fonts and colors were developed, web designers had a lot of trouble adapting HTML to these new features.

JavaScript

JavaScript is a more complicated language than HTML or CSS, and it wasn't released in beta form until 1995.

Nowadays, JavaScript is supported by all modern web browsers and is used on almost every site on the web for more powerful and complex functionality.

JavaScript is a logic-based programming language that can be used to modify website content and make it behave in different ways in response to a user's actions. Common uses for JavaScript include confirmation boxes, calls-to-action, and adding new identities to existing information.

In short, JavaScript is a programming language that lets web developers design interactive sites. Most of the dynamic

behavior you'll see on a web page is thanks to JavaScript, which augments a browser's default controls and behaviors.

JavaScript is particularly useful for assigning new identities to existing website elements, according to the decisions the user makes while visiting the page. For example, let's say you're building a landing page with a form you'd like to generate leads from by capturing information about a website visitor. You might have a "string" of JavaScript dedicated to the user's first name.

Other uses for JavaScript include security password creation, check forms, interactive games, animations, and special effects. It's also used to build mobile apps and create server-based applications. You can add JavaScript to an HTML document by adding these "scripts," or snippets of JavaScript code, into your document's header or body.

3.2 SOFTWARES USED

CODE EDITORS USED

NOTEPAD++

Notepad++ is a [text](#) and [source code editor](#) for use with [Microsoft Windows](#). It supports [tabbed](#) editing, which allows

working with multiple open files in a single window. The project's name comes from the [C increment operator](#).

VISUAL STUDIO CODE

Visual Studio Code is a source-code editor developed by Microsoft for Windows, Linux and MacOS. It includes support for debugging, embedded Git control and GitHub, syntax highlighting, intelligent code completion, snippets, and code refactoring.

CHAPTER 4

SYSTEM REQUIREMENTS,SOURCE CODE,RESULTS AND DISCUSSION

4.1SYSTEM REQUIREMENTS

***OPERATING SYSTEM – WIN/MAC**

***INTERNET CONNECTIVITY- REQUIRED**

***RAM – 2GB**

***BROWSER – CHROME/FIREFOX**

4.2 RESULTS AND DISCUSSION

This project involves a working website for joining different sports club and getting to know more about it.

CHAPTER 5

CONCLUSION , FUTURE WORK AND REFERENCE

5.1 CONCLUSION

This project has really been faithful and informative. It has made us learn and understand the many concepts in HTML,CSS AND JAVASCRIPT.

5.2 FUTURE WORK

This website will bring a new way of reading and writing blogs. A social media type of blogging website.
