ACKNOWLEDGEMENT

I am pleased to acknowledge my sincere thanks to Board of Management of **SATHYABAMA** for their kind encouragement in doing this project and for completing it successfully. I am grateful to them.

I convey my thanks to **Dr. G. Bhuvaneswari, MBA., Ph.D.**, Dean, School of Management Studies and **Dr. A. Palani, M.Com., M.Phil., M.B.A., Ph.D.**, Head of the Department, Dept. of Management Studies for providing me necessary support and details at the right time during the progressive reviews.

I would like to express my sincere and deep sense of gratitude to my Project Guide Ms.M..Sivapriya.,M.Com.,M.Phil.,PGDCA for her valuable guidance, suggestions and constant encouragement paved way for the successful completion of my project work.

I wish to express my thanks to all Teaching and Non-teaching staff members of the Department of Business Administration who were helpful in many ways for the completion of the project.

RENUKA DEVI P

DECLARATION

I RENUKA DEVI P (38280073) hereby declare that the Project Report entitled “ A study on impact of online textile stores on offline textile business”. student of Sathyabama Institute Of Science and Technology” done by me under the guidance of Ms.M..Sivapriya.,M.Com.,M.Phil.,PGDCA at SATHYABAMA INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI is submitted in partial fulfillment of the requirements for the award of Bachelor’s of Business Administration degree.

ABSTRACT

The Textile Sector in India ranks next to Agriculture. Textile is one of India's oldest industries and has a formidable presence in the national economy in as much as it contributes to about 14 per cent of manufacturing value-addition, accounts for around one-third of our gross export earnings and provides gainful employment to millions of people. The textile industry occupies a unique place in our country. One of the earliest to come into existence in India, it accounts for 14% of the total Industrial production, contributes to nearly 30% of the total exports and is the second largest employment generator after agriculture.

Textile Industry is providing one of the most basic needs of people and the holds importance; maintaining sustained growth for improving quality of life. It has a unique position as a self-reliant industry, from the production of raw materials to the delivery of finished products, with substantial value-addition at each stage of processing; it is a major contribution to the country's economy. This paper deals with structure, growth and size of the Indian textile industry, role of textile industry in economy, key advantages of the industry, textile industry export and global scenario and strength, weakness, opportunities and treats of the Indian textile industry.

1.1 INTRODUCTION

The Indian textile industry is one of the largest in the world with a massive raw material and textiles manufacturing base. Our economy is largely dependent on the textile manufacturing and trade in addition to other major industries. About 27% of the foreign exchange earnings are on account of export of textiles and clothing alone. The textiles and clothing sector contributes about 14% to the industrial production and 3% to the gross domestic product of the country. Around 8% of the total excise revenue collection is contributed by the textile industry. So much so, the textile industry accounts for as large as 21% of the total employment generated in the economy. Around 35 million people are directly employed in the textile manufacturing activities. Indirect employment including the manpower engaged in agricultural based raw-material production like cotton and related trade and handling could be stated to be around another 60 million.

A textile is the largest single industry in India (and amongst the biggest in the world), accounting for about 20% of the total industrial production. It provides direct employment to around 20 million people. Textile and clothing exports account for one-third of the total value of exports from the country. There are 1,227 textile mills with a spinning capacity of about 29 million spindles. While yarn is mostly produced in the mills, fabrics are produced in the powerloom and handloom sectors as well.

The Indian textile industry continues to be predominantly based on cotton, with about 65% of raw materials consumed being cotton. The yearly output of cotton cloth was about 12.8 billion m (about 42 billion ft). The manufacture of jute products (1.1 million metric tons) ranks next in importance to cotton weaving. Textile is one of India's oldest industries and has a formidable presence in the national economy inasmuch as it contributes to about 14 per cent of manufacturing value-addition, accounts for around one-third of our gross export earnings and provides gainful employment to millions of people. They include cotton and jute growers, artisans and weavers who are engaged in the organised as well as decentralised and household sectors spread across the entire country.

India's textile industry is one of the economy's largest. In 2000/01, the textile and garment industries accounted for about 4 percent of GDP, 14 percent of industrial output, 18 percent of industrial employment, and 27 percent of export earnings (Hashim). India's textile industry is also significant in a global context, ranking second to China in the production of both cotton yarn and fabric and fifth in the production of synthetic fibers and yarns.

In contrast to other major textile-producing countries, mostly mostly small-scale, nonintegrated spinning, weaving, cloth finishing, and apparel enterprises, many of which use outdated technology, characterize India's textile sector. Some, mostly larger, firms operate in the "organized" sector where firms must comply with numerous government labor and tax regulations. Most firms, however, operate in the small-scale "unorganized" sector where regulations are less stringent and more easily evaded.

The unique structure of the Indian textile industry is due to the legacy of tax, labor, and other regulatory policies that have favored small-scale, labor-intensive enterprises, while discriminating against larger scale, more capital-intensive operations. The structure is also due to the historical orientation towards meeting the needs of India's predominately low-income domestic consumers, rather than the world market. Policy reforms, which began in the 1980s and continued into the 1990s, have led to significant gains in technical efficiency and international competitiveness, particularly in the spinning sector. However, broad scope remains for additional reforms that could enhance the efficiency and competitiveness of India's weaving, fabric finishing, and apparel sectors.

1.2 INDUSTRY PROFILE

Unlike other major textile-producing countries, India's textile industry is comprised mostly of small-scale, nonintegrated spinning, weaving, finishing, and apparel-making enterprises. This unique industry structure is primarily a legacy of government policies that have promoted labor-intensive, small-scale operations and discriminated against larger scale firms:

- **Composite Mills.** Relatively large-scale mills that integrate spinning, weaving and, sometimes, fabric finishing are common in other major textile-producing countries. In India, however, these types of mills now account for about only 3 percent of output in the textile sector. About 276 composite mills are now operating in India, most owned by the public sector and many deemed financially “sick.”

- **Spinning.** **Spinning** is the process of converting cotton or manmade fiber into yarn to be used for weaving and knitting. Largely due to deregulation beginning in the mid-1980s, spinning is the most consolidated and technically efficient sector in India’s textile industry. Average plant size remains small, however, and technology outdated, relative to other major producers. In 2002/03, India’s spinning sector consisted of about 1,146 small-scale independent firms and 1,599 larger scale independent units.

- **Weaving and Knitting.** Weaving and knitting converts cotton, manmade, or blended yarns into woven or knitted fabrics. India’s weaving and knitting sector remains highly fragmented, small-scale, and labor-intensive. This sector consists of about 3.9 million handlooms, 380,000 “powerloom” enterprises that operate about 1.7 million looms, and just 137,000 looms in the various composite mills. “Powerlooms” are small firms, with an average loom capacity of four to five owned by independent entrepreneurs or weavers. Modern shuttleless looms account for less than 1 percent of loom capacity.

- **Fabric Finishing.** Fabric finishing (also referred to as processing), which includes dyeing, printing, and other cloth preparation prior to the manufacture of clothing, is also dominated by a large number of independent, small scale enterprises. Overall, about 2,300 processors are operating in India, including about 2,100 independent units and 200 units that are integrated with spinning, weaving, or knitting units.

- **Clothing. Apparel** is produced by about 77,000 small-scale units classified as domestic manufacturers, manufacturer exporters, and fabricators (subcontractors).

India has already completed more than 50 years of its independence. The analysis of the growth pattern of different segment of the industry during the last five decades of post independence era reveals that the growth of the industry during the first two decades after the independence had been gradual, though lower and growth had been considerably slower during the third decade. The growth thereafter picked up significantly during the fourth decade in each and every segment of the industry. The peak level of its growth has however been reached during the fifth decade i.e., the last ten years and more particularly in the 90s. The Textile Policy of 1985 and Economic Policy of 1991 focussing in the direction of liberalisation of economy and trade had in fact accelerated the growth in 1990s. The spinning spearheaded the growth during this period and man-made fibre industry in the organised sector and decentralised weaving sector.

The textile industry in India covers a wide gamut of activities ranging from production of raw material like cotton, jute, silk and wool to providing high value-added products such as fabrics and garments to consumers. The industry uses a wide variety of fibres ranging from natural fibres like cotton, jute, silk and wool to man made fibres like polyester, viscose, acrylic and multiple blends of such fibres and filament yarn. The textile industry plays a significant role in Indian economy by providing direct employment to an estimated 35 million people, by contributing 4 per cent of GDP and accounting for 35 per cent of gross export earnings. The textile sector contributes 14 per cent of the value-addition in the manufacturing sector.

Textile exports during the period of April-February 2003-2004 amounted to \$11,698.5 million as against \$11,142.2 million during the same period in the previous year, showing an increase of around 5 per cent. Estimates say that the textile sector might achieve about 15 to 18 per cent growth this year following dismantling of MFA.

Physical Location

A physical storefront doubles up as advertising for your brand. With traffic passing by every day, customer visits to your store are likely to happen. Since your store is

permanently there, it constantly serves as a reminder for customers to drop in whenever they pass by the store. This allows you to spend lesser on your marketing budget as your store already promotes brand visibility every day.

Brand Representation & Shopping Experience

Working within the confines of a digital screen can be limiting for some brands. With a physical space, you can decorate and furnish it extensively to better articulate the vision for your brand. From the racks to the flooring, to the scent of the store, to how the products are displayed, there are many ways for you to anchor your brand identity in a physical space. You can also control how your customers navigate around the store – what they see first when they enter and what they see right before they leave. Additionally, with sales staff on the ground, it injects a human touch and exemplifies the brand's standards of service. All of these components make up an immersive shopping experience, which can make a real impression on your customers and keep them coming back for more.

What You See Is What You Get

Most shoppers will not reject the process of seeing-and-touching before making a purchase. It is a surefire and straightforward way of guaranteeing that a product is satisfactory. For this reason alone, brick-and-mortar stores hold a trump card and are still favoured by man.

High Maintenance

As mentioned above, the upfront costs in setting up a brick-and-mortar store are high. On top of this, the running costs are high too. Having to upkeep rent and utilities on a monthly basis can dry your funds up quickly if you're not careful with your business decisions.

Permanent Location

Location can be a double-edged sword. Competing brands might set up shop in the vicinity and make it tougher for your business to thrive. Other unforeseen circumstances such as the development of your area could also cause potential customers to move and affect traffic to your store.

The decision to set up an online or offline store even after evaluating the pros and cons of both isn't straightforward. There isn't a one-size-fits-all solution in this case. In a constantly changing landscape, there are many brands that are opting for an omnichannel approach to maximize their reach. Ultimately, what brands should ask themselves is how to meet the changing expectations of their consumers and to utilise a channel/s that can best serve that whilst ensuring that their business continues to grow.

Longer Working Hours

Having a physical store will mean that you have to keep your doors open for at least 8-10 hours a day. You will need to cater for customers who are shopping after work & on weekends, so the flexibility of your working hours will be catered these peak periods. Factoring in commute time, this often leaves you with limited personal time.

1.3 NEED FOR STUDY

- Growing numbers of consumers shop online to purchase textiles, gather product information or even browse for enjoyment. Online textile shopping environments are therefore playing an increasing role in the overall relationship between marketers and their consumers.
- The mains reasons or factors which attract consumers to do textile shopping online and then main reasons or obstacles which discourage consumers from offline textile shopping .
- The impact of online textile shopping environments on offline textile business which necessitates a critical understanding for marketing sector.

1.4 SCOPE OF THE STUDY

- The research measures the experiences of direct sellers.
- Defines and analyses the experiences based on key deliverables.
- Gains insights into seller's perspective.
- Offline seller's impact is how they manage with their problem and how they are tackling it.

1.5 OBJECTIVE OF THE STUDY

To study the reasons why despite increase in internet users, online textile shopping has not been increasing.

To investigate the impact of online textile store on seller's perceptions of Internet-based e-retailing and scrutinize the major factors that reduces the offline textile shopping behaviour.

To analyze the individual factors that might, on one hand, prompt a buyer to make an online purchase decision and on the other hand, restrain from such decisions. Finally to examine some recommendations to the e-tailers in order to improve the current situation.

Primary objective

A study on seller's perspective towards market situation and impact.

Secondary objective

- To study on perception towards impact of direct market offline sellers.
- To understanding their problem
- To study on perception towards the loan procedures
- To study on perception towards the stock clearance.

CHAPTER 2

REVIEW OF LITERATURE

2.1 Introduction

In this Chapter, the researcher has made an attempt to study and understand the complex concepts of Customer experience. This attempt includes, understanding the basic concepts of seller's perspective, analyzing research studies made by earlier researchers in respect of offline dress seller's impact due to COVID 19 , For this, the researcher has used various books, research Journals and websites. The detailed list is further elaborated in the Bibliography. Through this Literature Survey researcher wants to find out which are the important issues on offline market.

2.2 List of reviews

Eleonora Pantano is Senior Lecturer of Marketing at University of Bristol since 2018. Dr. Pantano's research activities mainly relate to the development of new customer solutions to improve retail analytics, strategies and management, with emphasis on the role of artificial intelligence, emotional analytics, and machine learning algorithms.

Lufkin, 2020 COVID 19 has forced consumers to change the way they preferred to shop. There is an increased shift in consumer buying behaviour from traditional shopping to online shopping. Apart from the augmented number of customers indulging into online shopping shift has been observed in the choice of products being ordered by customers through these online tools. The majority of the customers have started positively ordering more personal care and medical kits rather than ordering fashion products. National Retail Federation has surveyed on consumer's online shopping behaviour in this epidemic situation .

Shashidhar 2020 All these behavioural changes are not permanent but few are going to last permanently. As the society will recover from this survival mode, this digital- online shopping adoption is likely to become permanent. So, in the end, this pandemic situation has been classified into two aspects one is a shift in customer behaviour that avoids public crowded gatherings and second is more inclination towards digital adoption .

Kavvouris et al. 2020 argued that threats to freedom trigger adverse cognition in consumers, decreases their choice or decision confidence, and provokes psychological reactance. Relying on the above studies, the authors infer that the presence of restrictions, adverse cognition, and threats reduce consumers' confidence for physical, offline, or traditional shopping choices. Therefore, it can be postulated that the threats of the COVID-19 pandemic eliminate the liberty of consumers' physical shopping choices that decrease their confidence, which develops a state of psychological reactance.

Ji and Miao 2020 found that government support for dispute resolution and freedom of shopping develop consumers' trust and motivation that increase their resistance to threats. In other instances, people's trust in a specific situation extends their positive intrinsic motivation toward freedom. Trust in open and e-government policies eliminates consumer's anger, depressive symptoms, anxiety.

Peng and Chen2019 have shown that consumers' psychological reactance emanates from abandoning their shopping destinations because the restrictions threaten their destinations freedom. To avoid psychological pain and choice conflict in an ambivalent situation, consumers feel hesitant to make an immediate decision. Consumer choices with difficult alternatives develop the perception of hesitation that leads to an unpleasant motivational consequent

Dong-Mo Koo, Ji-Holon Lee proposed an interrelationship among dominance, energetic and tense arousal, pleasure and their impact on intention. Results from the from a survey of 406 consumers demonstrated that dominance had a significant positive and/or negative effect on both energetic and tense arousal, it

has no impact on pleasure and intention under both offline and online environment; effect of dominance on tense arousal was not statistically significant in an online shopping environment; both energetic and tense arousal has a positive and/or negative impact on pleasure.

Huang et al. 2018, consumers' ambivalent feelings about shopping choices create hesitation in consumers' Further purchase and often engage them in an unpleasant state of motivation that leads to choice defer. Scholars mentioned that consumers perceive hesitation about freedom of purchase choices .We infer from these arguments that the COVID-19 pandemic restricts consumers' choice freedom and develops a perception of hesitation about offline shopping choices, which cause psychological reactance.

Argouslidis et al., 2018 results indicated that perceived choice hesitation significantly develops consumers' reactance, and the current findings are consistent with previous work of, indicating that consumers' hesitation developed by fear, threats, and avoidance triggers intrinsic motivation to re-establish freedom. The findings not only align with the prior studies but also extends the body of knowledge in decision making and psychology.

Andrews, 2016 Results demonstrate that perceived choice confidence has a significant positive effect on consumers' psychological reactance. These findings are unique in terms of COVID-19 pandemic threats for consumers' confidence on offline shopping choices and are in complete agreement with the studies

Tsai and McGill 2011, consumers perceive confidence judgment as a malleable function which can differ in choice evaluation. consumers' reactance, the study explains the consumer's perception of their choice hesitation and choice confidence during the threats of COVID-19 pandemic

Scholars Novemsky et al., 2007 established that the perceived difficulty and hesitation of choosing a preference associated with external forces cause consumer metacognitive experience during the choice decision. Based on aforementioned arguments, we posit that the existence of threats, uncertainty, and risk develop consumers' perception of hesitation for traditional offline shopping choices. In the present context, we argue that consumers perceive hesitation for freedom of

physical or offline shopping choices due to threats of COVID-19 and engage in psychological reactance.

Novemsky et al. 2007 indicate that the degree of variance depends on the situation and consumer freedom that develop a state of reactance to recover the difference. Scholars affirm that in the absence of choice freedom, consumers perceive inadequate confidence.

Greenstein 2005 find that rural areas are on the margin more likely to adopt participation technologies, as defined above, that aid communication across establishments; and Sinai and Wildfowl .

Luce et al., 2003 We argue that the COVID-19 pandemic restricts consumers' freedom of choices that decreases perceived confidence for traditional or physical shopping choices and develops their psychological reactance.

CHAPTER -3 RESEARCH METHODOLOGY

3.1 Research Design

Descriptive Research

Design

Descriptive research is a study designed to depict the participants in an accurate way. More simply put, descriptive research is all about describing people who take part in the study.

3.2 Sampling Technique

Convenience sampling method A convenience sample is one of the main types of non-probability sampling methods. A convenience sample is made up of people who are easy to reach.

3.3 Source data

Data collection is the term used to describe a process of preparing and collecting data.

Primary Data – Questionnaire given to 121 respondents

Secondary Data - Websites and online journals, Published reports & Review of literature from published articles the study.

3.4 STRUCTURE OF QUESTIONNAIRE

Questionnaire was divided into two sections. First part was designed to know the general information about seller's perspective and the second part contained the respondent's opinions about impact due to covid 19.

3.5 SAMPLING TECHNIQUE

3.4.1 Convenience sampling method

A convenience sample is one of the main types of non-probability sampling methods.

A convenience sample is made up of people who are easy to reach.

3.6 PERIOD OF STUDY

The duration of study is from January 2021 to March 2021 which is a three months of study

CHAPTER 4

DATA ANALYSIS AND INTERPRTATION

4.1 PERCENTAGE ANALYSIS

TABLE 4.1.1 BUSINESS EXPERIENCE

S NO	PARTICULARS	NO OF RESPONSES	PERCENTAGE
1	1 Year	33	30
2	1 to 10 years	51	46.4
3	10 to 20 years	26	23.6
4	Not answered	11	21
	TOTAL	121	100

Source: Primary data

Chart4.1.1: Age of the respondents

Interpretation

From the above table it is interpreted that the number of respondents for 1 year of business experience of respondents are 30%, between 1 to 10 years business experience of respondents are 46.6%, between 10 to 20 years business experience of respondents are 23.6%, not answered are 21%.

Inference

Majority (46.6%) of the respondents are business experience between 1 to 10 years.

TABLE 4.1.3: FOR WHICH GENDER DO U HAVE CLOTHS

S.NO	PARTICULARS	NO. OF RESPONDENCE	PERCENTAGE
1	MALE	36	32.1
2	FEMALE	32	28.6
3	BOTH	44	39.3
4	NOT ANSWERED	9	10.8
	TOTAL	121	100

Source data : Primary data.

Chart 4.1.3 For which gender do u have cloths

Interpretation

From above table it is interpretation that number of male respondent is 32.1%, female respondent is 28.6%, both 39.3% and not answered 10.8%.

Inference

Majority (39.3%) of the respondents are both.

Table 4.1.4 : Is your market affected due to online sellers.

18. Majority (58.6%) of the respondents are percentage offer.
19. Majority (66.11%) of the respondents are yes.
20. Majority (40.4%) of the respondents are more competitive.

5.2 suggestion

Retailers have to change their attitude towards the market. Today's is a consumer market and as a result the priority is the consumer satisfaction. The firm has to be in the good books of the consumer. Better quality products, fair price and friendly after-sale services are the basic areas in which the business has to concentrate to a remarkable extent. Additional services should be provided to the consumers to woo them and build upon a loyalty which in turn would ensure a stable sales in the years to come.

5.3 Conclusion

The face of retail has changed. The advent of technology in recent period being the primary reason for it. Today, retailing means going into shopping centers, going online and going mobile. In all these, small retailers miss out somewhere. But the nearby store is always the most important concern for all reason and seasons. It needs to revive not just survive. The retail stores needs to simply uplift its pattern of business and face the competitive world with a more positive outlook. E-stores and retail stores both have to survive, none at the cost of the other. It's not just about the livelihood it gives to the thousands of people but also the convenience and the steadfastness of a fixed retail store.

Questionnaire:

Title : A study on impact of online textile stores on offline textile business-sellers perspective.

1. Business experience?

- a) 1 year
- b) 1-10 years
- c) 10-20 years

2. For which gender do you have cloths?

- a) male
- b) female
- c) both

3. Is your market affected due to online sellers?

- a) yes
- b) no

4. Do you think demand on offline purchase is decreased due to online shopping?

a) yes b) no

5. Is online shopping affects your profit margin?

- a) high
- b) low
- c) neutral

6. Do you think there is an increase in online shopping in recent times?

a) yes b) no

7. why people prefer online shopping?

- a) pandemic situation
- b) busy schedule
- c) unique collections

8. What is your opinion about online shopping ?

- a) Good
- b) Bad
